

# Satellite® 1955 Series User's Guide

If you need assistance:

- ❖ InTouch® Center
  - Calling within the United States (800) 457-7777
  - Calling from outside the United States (949) 859-4273

For more information, see [Chapter 9](#) on [page 186](#) in this guide.

## Model: Satellite® 1955 Series

### ReWritable CD/DVD Drives

The computer system you purchased may include a ReWritable CD and/or DVD drive(s), among the most advanced data storage technologies available. As with any new technology, you must read and follow all set-up and usage instructions in the applicable user guides and/or manuals enclosed. If you fail to do so, this product may not function properly and you may lose data or suffer other damage.

**TOSHIBA AMERICA INFORMATION SYSTEMS ("TOSHIBA"), ITS AFFILIATES AND SUPPLIERS DO NOT WARRANT THAT OPERATION OF THE PRODUCT WILL BE UNINTERRUPTED OR ERROR FREE. YOU AGREE THAT TOSHIBA, ITS AFFILIATES AND SUPPLIERS SHALL HAVE NO RESPONSIBILITY FOR DAMAGE TO OR LOSS OF ANY BUSINESS, PROFITS, PROGRAMS, DATA OR REMOVABLE STORAGE MEDIA ARISING OUT OF OR RESULTING FROM THE USE OF THE PRODUCT, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.**

### Protection of Stored Data

For your important data, please make periodic back-up copies of all the data stored on the hard disk or other storage devices as a precaution against possible failures, alteration, or loss of the data. **IF YOUR DATA IS ALTERED OR LOST DUE TO ANY TROUBLE, FAILURE OR MALFUNCTION OF THE HARD DISK DRIVE OR OTHER STORAGE DEVICES AND THE DATA CANNOT BE RECOVERED, TOSHIBA SHALL NOT BE LIABLE FOR ANY DAMAGE OR LOSS OF DATA, OR ANY OTHER DAMAGE RESULTING THEREFROM. WHEN COPYING OR TRANSFERRING YOUR DATA, PLEASE BE SURE TO CONFIRM WHETHER THE DATA HAS BEEN SUCCESSFULLY COPIED OR TRANSFERRED. TOSHIBA DISCLAIMS ANY LIABILITY FOR THE FAILURE TO COPY OR TRANSFER THE DATA CORRECTLY.**

### Critical Applications

The computer you have purchased is not designed for any "critical applications." "Critical applications" means life support systems, medical applications, connections to implanted medical devices, commercial transportation, nuclear facilities or systems or any other applications where product failure could lead to injury to persons or loss of life or catastrophic property damage. **ACCORDINGLY, TOSHIBA, ITS AFFILIATES AND SUPPLIERS DISCLAIM ANY AND ALL LIABILITY ARISING OUT OF THE USE OF THE COMPUTER PRODUCTS IN**

---

**ANY CRITICAL APPLICATIONS. IF YOU USE THE COMPUTER PRODUCTS IN A CRITICAL APPLICATION, YOU, AND NOT TOSHIBA, ASSUME FULL RESPONSIBILITY FOR SUCH USE.**

## FCC Notice

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the separation between the equipment and receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

*NOTE: Only Peripherals complying with the FCC Class B limits may be attached to this equipment. Operation with noncompliant peripherals or peripherals not recommended by Toshiba is likely to result in interference to radio and TV reception. Shielded cables must be used between the external devices and the computer's or expansion unit's serial port, parallel port, monitor port, USB port, PS/2 port®, i.LINK® port and microphone jack. Changes or modifications made to this equipment not expressly approved by Toshiba or parties authorized by Toshiba could void the user's authority to operate the equipment.*

---

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

**Contact:**

Toshiba America Information Systems, Inc.  
9740 Irvine Blvd.  
Irvine, CA 92618-1697  
(949) 583-3000

## Industry Canada Requirement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conformé à la norme NMB-003 du Canada.

## FCC Requirements

The following information is pursuant to FCC CFR 47, Part 68 and refers to internal modems.

### Installation

When you are ready to install or use the modem, call your local telephone company and give them the following information:

- ❖ The telephone number of the line to which you will connect the modem.
- ❖ The FCC registration number of the modem.
- ❖ The ringer equivalence number (REN) of the modem, which is 0.6B.

The modem connects to the telephone line by means of a standard jack called the USOC RJ11C.

### Type of Service

Your modem is designed to be used on standard-device telephone lines. Connection to telephone company-provided coin service (central office implemented systems) is prohibited. Connection to party lines service is subject to State tariffs. If you have any questions about your telephone line, such as how many pieces of equipment you can connect to it, the telephone company will provide this information upon request.

### Telephone Company Procedures

The goal of the telephone company is to provide you with the best service it can. In order to do this, it may occasionally be necessary for them to make changes in their equipment, operations or procedures. If these changes might affect your service or the operation of your equipment, the telephone

---

company will give you notice, in writing, to allow you to make any changes necessary to maintain uninterrupted service.

## If Problems Arise

If any of your telephone equipment is not operating properly, you should immediately remove it from your telephone line, as it may cause harm to the telephone network. If the telephone company notes a problem, they may temporarily discontinue service. When practical, they will notify you in advance of this disconnection. If advance notice is not feasible, you will be notified as soon as possible. When you are notified, you will be given the opportunity to correct the problem and informed of your right to file a complaint with the FCC. In the event repairs are ever needed on your modem, they should be performed by Toshiba Corporation, Toshiba America Information Systems, Inc. or an authorized representative of Toshiba.

## Disconnection

If you should ever decide to permanently disconnect your modem from its present line, please call the telephone company and let them know of this change.

## Fax Branding

The Telephone Consumer Protection Act of 1991 makes it unlawful to use a computer or other electronic device to send any message via a telephone fax machine unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business, other entity or individual sending the message and the telephone number of the sending machine or such business, other entity or individual.

In order to program this information into your fax modem, you should complete the setup for your fax software before sending a message.

## Instructions for IC CS-03 certified equipment

- 1 NOTICE: The Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational and safety requirements as prescribed in the appropriate Terminal Equipment Technical Requirements document(s). The Department does not guarantee the equipment will operate to the user's satisfaction.

Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be

aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be coordinated by a representative designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

**Caution:** Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

- 2** The user manual of analog equipment must contain the equipment's Ringer Equivalence Number (REN) and an explanation notice similar to the following:

The Ringer Equivalence Number (REN) of this device can be found on the label affixed to your computer.

**NOTICE:** The Ringer Equivalence Number (REN) assigned to each terminal device provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed 5.

- 3** The standard connecting arrangement (telephone jack type) for this equipment is jack type(s): USOC RJ11C.

## Wireless Interoperability

The TOSHIBA Wireless LAN Mini PCI Card products are designed to be interoperable with any wireless LAN product that is based on Direct Sequence Spread Spectrum (DSSS) radio technology, and is compliant to:

- ❖ The IEEE 802.11 Standard on Wireless LANs (Revision A/B), as defined and approved by the Institute of Electrical and Electronics Engineers.
- ❖ The Wireless Fidelity(WiFi) certification as defined by the WECA Wireless Ethernet Compatibility Alliance.

---

## Caution

Bluetooth™ and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth™ and WirelessLAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection.

If you should experience any such problem, immediately turn off either one of your Bluetooth™ or WirelessLAN.

Please contact Toshiba PC product support on web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

## Caution

This device is restricted to indoor use due to its operation in the 5.15 to 5.85 GHz frequency range.

## Wireless LAN and your Health

Wireless LAN products, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by Wireless LAN devices however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because Wireless LAN products operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Wireless LAN is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of Wireless LAN may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the Wireless LAN equipment on board of airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the Wireless LAN device prior to turning on the equipment.

---

## Regulatory Information

The TOSHIBA Wireless LAN Mini PCI Card must be installed and used in strict accordance with the manufacturer's instructions as described in the user documentation that comes with the product. This device complies with the following radio frequency and safety standards.

### Canada – Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes : (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term "IC" before the equipment certification number only signifies that the Industry Canada technical specifications were met.

IC: 248H-DPA3233W

This device has been designed to operate with an antenna having a maximum gain of 4.8dBi. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (EIRP) is not more than that required for successful communication.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

### Europe – EU Declaration of Conformity

This device complies with the essential requirements of the R&TTE Directive 1999/5/EC with essential test suites as per standards:

- ❖ EN 60950 Safety of Information Technology equipment
- ❖ ETS 300 328 Technical requirements for radio equipment
- ❖ ETS 300 826 General EMC requirements for radio equipment.

België/ Belgique:	<p>For outdoor usage only channel 10 (2457 MHz) and 11 (2462 MHz) is allowed.</p> <p>For private usage outside buildings across public grounds over less than 300m no special registration with IBPT/BIPT is required. Registration to IBPT/BIPT is required for private usage outside buildings across public grounds over more than 300m. An IBPT/BIPT license is required for public usage outside building. For registration and license please contact IBPT/BIPT.</p>
	Gebruik buiten gebouw alleen op kanalen 10 (2457 MHz) en 11 (2462 MHz). Voor privé-gebruik buiten gebouw over publieke grond over afstand kleiner dan 300m geen registratie bij BIPT/IBPT nodig; voor gebruik over afstand groter dan 300m is wel registratie bij BIPT/IBPT nodig. Voor publiek gebruik buiten gebouwen is licentie van BIPT/IBPT verplicht. Voor registratie of licentie kunt u contact opnemen met BIPT.
	L'utilisation en extérieur est autorisé sur le canal 10 (2457 MHz) et 11 (2462 MHz). Dans le cas d'une utilisation privée, à l'extérieur d'un bâtiment, au-dessus d'un espace public, aucun enregistrement n'est nécessaire pour une distance de moins de 300m. Pour une distance supérieure à 300m un enregistrement auprès de l'IBPT est requise. Pour une utilisation publique à l'extérieur de bâtiments, une licence de l'IBPT est requise. Pour les enregistrements et licences, veuillez contacter l'IBPT.
Deutschland:	License required for outdoor installations. Check with reseller for procedure to follow.
	Anmeldung im Outdoor-Bereich notwendig, aber nicht genehmigungspflichtig. Bitte mit Händler die Vorgehensweise abstimmen.
France:	Restricted frequency band: only channels 10 and 11 (2457 MHz and 2462 MHz respectively) may be used in France. License required for every installation, indoor and outdoor installations. Please contact ART for procedure to follow.
	Band de fréquence restreinte : seuls les canaux 10 à 11 (2457 et 2462 MHz respectivement) doivent être utilisés en France. Toute utilisation, qu'elle soit intérieure ou extérieure, est soumise à autorisation. Vous pouvez contacter l'Autorité de Régulation des Télécommunications ( <a href="http://www.art-telecom.fr">http://www.art-telecom.fr</a> ) pour la procédure à suivre.

Italia:	License required for indoor use. Use with outdoor installations not allowed.
	E' necessaria la concessione ministeriale anche per l'uso interno. Verificare con i rivenditori la procedura da seguire. L'uso per installazione in esterni non e' permessa.
Nederland:	License required for outdoor installations. Check with reseller for procedure to follow.
	Licentie verplicht voor gebruik met buitenantennes. Neem contact op met verkoper voor juiste procedure.

## USA-Federal Communications Commission (FCC)

This device complies with Part 15 of FCC Rules. Operation of the devices in a Wireless LAN System is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference that may cause undesired operation.

TOSHIBA is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this TOSHIBA Wireless LAN Mini PCI Card, or the substitution or attachment of connecting cables and equipment other than specified by TOSHIBA.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

## Caution: Exposure to Radio Frequency Radiation

The Toshiba Wireless LAN Mini PCI Card will be installed with one of two types of antennas. The both of antenna types, when installed are located at the upper edge of the LCD screen.

For both antennas, the radiated output power of the TOSHIBA Wireless LAN Mini PCI Card is far below the FCC radio frequency exposure limits.

Nevertheless, the TOSHIBA Wireless LAN Mini PCI Card shall be used in such a manner that the potential for human contact during normal operation is minimized. In normal operating configuration, the LCD in the upright position, the distance between the antenna and the user should not be less than 20cm. The antenna(s) used for this transmitter must not be co-located or operating in

---

conjunction with any other antenna or transmitter. Antenna(s) used in 5.15-5.25GHz frequency band must be integral antenna which provide no access to the end user.

Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information.

Relevant transmitters include FCC IDs: CJ6UPA3233WL, CJ6UPA3232BT.

The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada's website [www.hc-sc.gc.ca/rpb](http://www.hc-sc.gc.ca/rpb).

## Caution: Radio Frequency Interference Requirements

This device is restricted to indoor use due to its operation in the 5.15 to 5.25 GHz frequency range. FCC requires this product to be used indoors for frequency range 5.15 to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

High power radars are allocated as primary users of the 5.25 to 5.35 GHz and 5.65 to 5.85 GHz bands. These radar stations can cause interference with and/or damage this device.

## Taiwan

Article 14	Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.
Article 17	Any use of low power radio frequency electric machinery shall not affect the aviation safety and interfere with legal communications. In event that any interference is found, the use of such electric machinery shall be stopped immediately, and reusing of such products can be resumed until no interference occurs after improvement.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

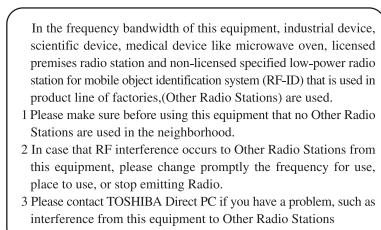

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.

## Using this equipment in Japan

In Japan, the frequency bandwidth of 2,400.2,483.5MHz for second generation lowpower data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

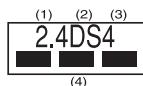

### 1. Sticker

Please put the following sticker on devices incorporating this product.

### 2. Indication

The indication shown below appears on this equipment.

- 1 2.4 this equipment uses a frequency of 2.4GHz.
- 2 DS.This equipment uses DS-SS modulation.
- 3 The interference range of this equipment is less than 40m.
- 4 This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz.

It is possible to avoid the band of mobile object identification systems.

### 3. TOSHIBA Direct PC

Monday – Friday: 10:00 – 17:00

Toll Free Tel: 0120-13-1100

---

Direct Dial: 03-3457-5916

Fax: 03-5444-9450

## Device Authorization

This device obtains the Technical Regulation Conformity Certification and the Technical Conditions Compliance Approval, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Radio Law and the Telecommunications Business Law of Japan.

The Name of the radio equipment: PA3232U-1MPC

TELECOM ENGINEERING CENTER Approval Number: 03NY.A0018,  
03GZDA0017

The following restrictions apply:

- ❖ Do not disassemble or modify the device.
- ❖ Do not install the embedded wireless module into other device.

## Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the distance between the equipment and the receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

Toshiba is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this Toshiba Wireless LAN Mini PCI Card, or the substitution or attachment of connecting cables and equipment other than specified by Toshiba.

---

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

## Approved Countries for use

This equipment is approved to the radio standard by the countries in Fig.1.

Australia	Austria	Belgium	Canada	Denmark
Finland	France	Germany	Greece	Iceland
Ireland	Italy	Japan	Luxembourg	Netherlands
New Zealand	Norway	Poland	Portugal	Spain
Sweden	Switzerland	UK	USA	

**Caution:** Do not use this equipment except in the countries in Fig.1.

## Caution: Bluetooth and Exposure to Radio Frequency Radiation

The radiated output power of the Bluetooth™ Card from Toshiba is far below FCC radio frequency exposure limits. Nevertheless, the Bluetooth card shall be used in such a manner that the potential for human contact during normal operation is minimized. In order to comply with FCC radio frequency radiation exposure guidelines for an uncontrolled environment, the Bluetooth Card has to be operated with the user maintaining a minimum distance of 20 cm from the antennas located on top of the LCD when the display is raised to its normal operating position. Refer to the Regulatory Statements as identified in the documentation that comes with those products for additional information. No other transmitter may be co-located with this device except FCC ID# CJ6PA3070WL or CJ6PA3171WL.

## CD-ROM, DVD-ROM, Multifunction drive safety instructions

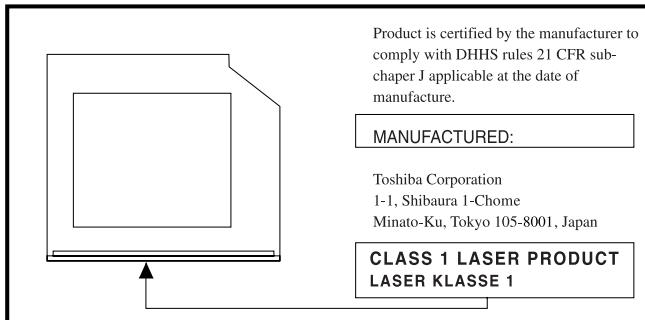

The CD-ROM, DVD-ROM and Multifunction drives employ a laser system. To ensure proper use of this product, please read this instruction manual carefully and retain for future reference. Should the unit ever require maintenance, contact an authorized service location.

Use of controls, adjustments or the performance of procedures other than those specified may result in hazardous radiation exposure.

To prevent direct exposure to the laser beam, do not try to open the enclosure.

## Location of the required label

(Sample shown below. (Location of the label and manufacturing information may vary.)

*CAUTION: This appliance contains a laser system and is classified as a "CLASS 1 LASER PRODUCT." To use this model properly, read the instruction manual carefully and keep it for your future reference. In case of any trouble with this model, please contact your nearest "AUTHORIZED service station." To prevent direct exposure to the laser beam, do not try to open the enclosure.*

CLASS 1 LASER PRODUCT  
LASER KLASSE 1

*Use of controls or adjustments or performance of procedures other than those specified in the owner's manual may result in hazardous radiation exposure.*

# Introduction

---

Welcome to the world of powerful and portable multimedia computers! With your new Toshiba notebook computer, your access to information can accompany you wherever you go.

You will find that your Microsoft® Windows® XP operating system is already installed on your computer. It offers exciting features and easy Internet access.

## This guide

This guide introduces the computer's features. You can:

- ❖ Read the entire guide from beginning to end.
- ❖ Skim through and stop when a topic interests you.
- ❖ Use the table of contents and the index to find specific information.

If you are new to computers, or have not used a notebook computer before, read the first couple of chapters to familiarize yourself with the components of the computer and how to turn it on. After that, seek out whatever interests you most.

## Safety icons

This manual contains safety instructions that must be observed in order to avoid potential hazards that could result in personal injuries, damage to your equipment, or loss of data. These safety cautions have been classified according to the seriousness of the risk, and the icons highlight these instructions as follows:

---

*DANGER: This icon indicates the existence of a hazard that could result in death or serious bodily injury if the safety instruction is not observed.*

---

*WARNING: This icon indicates the existence of a hazard that could result in bodily injury if the safety instruction is not observed.*

---

*CAUTION: This icon indicates the existence of a hazard that could result in damage to equipment or property if the safety instruction is not observed.*

---

*NOTE: This icon indicates information that relates to the safe operation of the equipment or related items.*

---

## Other icons used

Additional icons highlight other helpful or educational information:

*TECHNICAL NOTE: This icon highlights technical information about the computer.*

*HINT: This icon denotes helpful hints and tips.*

*DEFINITION: This icon indicates the definition of a term used in the text.*

## Other documentation

Your computer comes with the following documentation:

- ❖ This electronic version of the user's guide. Look for the user's guide icon on your desktop or in the DOCS folder on the C: drive.
- ❖ Guides for other programs that may come preinstalled on your computer for additional programs on your Recovery CDs.
- ❖ For accessory information, visit Toshiba's web site at [toshiba.com](http://toshiba.com).
- ❖ The Microsoft® Windows® operating system documentation which explains the features of the operating system.

---

## Service options

Toshiba offers a full line of service options built around its SelectServ® warranty programs. For more information, visit Toshiba's Web site at [toshiba.com](http://toshiba.com).

If you have a problem or need to contact Toshiba, see “[If Something Goes Wrong](#)” on page 186.

# Chapter 1

## Finding Your Way Around

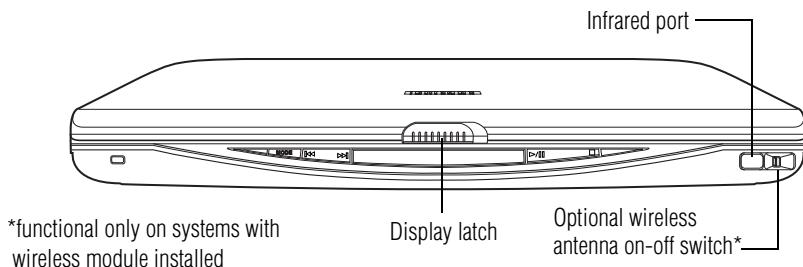

---

This chapter presents a “grand tour” of the exterior features of your notebook computer. It serves as a reference when you need to locate parts of the computer.

### Making sure you have everything

Before doing anything else, consult the Quick Start card provided with your system to make sure you received everything. If any items are missing or damaged, notify your dealer immediately. For additional help, see “[If you need further assistance](#)” on page 218.

## Front with the display closed

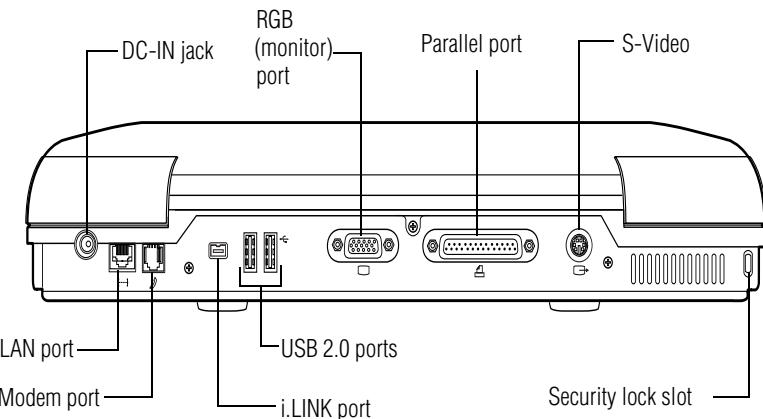

The **display latch** keeps the display panel closed and locked. To open the display panel, slide the display latch to the right and raise the panel.

On those systems with Wi-Fi™, the **wireless antenna on-off switch** turns the computer's wireless antenna on or off.

The **fast infrared port** allows cable-free communication with another device, such as a computer or printer, that has a compatible infrared port.

## Back

The **DC-IN jack** is where you plug in the AC adapter.

The **LAN port** enables you to connect the computer to a local area network using a 10/100 Ethernet link.

The **modem port** enables you to use a RJ11 telephone cable to connect the modem directly to a standard telephone line. For more information, see “[Connecting the modem](#)” on page 90.

**i.LINK® port**—The i.LINK® port on the back of the computer provides very fast data transfer rates of up to 400 megabits per second (Mbps). You can connect up to 63 external devices to this port.

**USB 2.0 ports**—Use the **Universal Serial Bus 2.0 (USB) ports** to connect USB peripherals.

*DEFINITION: USB 2.0 is a peripheral expansion standard that supports a data transfer rate of up to 480 Mbps for peripherals such as keyboards and pointing devices. USB peripherals have a single standard for cables and connectors. The USB standard also allows hot swapping of peripherals.*

The **RGB (monitor) port** enables you to connect an external monitor.

The **parallel port** enables you to connect a parallel printer or other parallel device, including ECP-compatible devices.

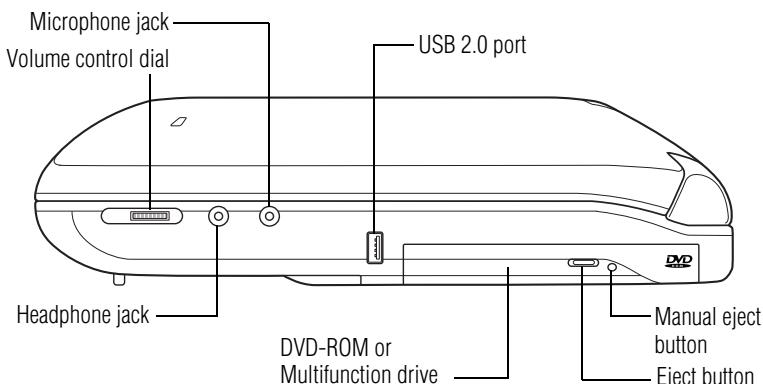

**S-video** enables you to play DVD audio and video on a projector or TV that accepts audio/video inputs.

The **security lock slot** enables you to attach an optional Port Noteworthy® computer lock cable to your computer to secure it to a large, heavy object such as your desk.

## Right side

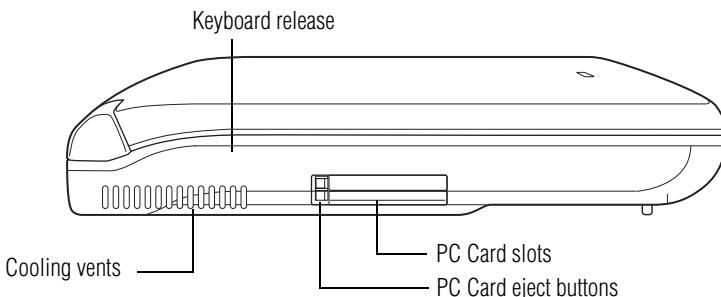

- The 3.5 mm **headphone jack** lets you connect stereo headphones or other audio-output devices, such as external speakers. Connecting headphones or other devices to this jack automatically disables the internal speakers.
- The 3.5 mm **microphone jack** lets you connect an external monaural microphone.
- The **volume control dial** lets you adjust the loudness of the system speakers.
- The **USB (Universal Serial Bus) 2.0 port** enables you to connect USB peripherals to your computer.
- The **DVD-ROM or Multifunction drive** enables you to play high-resolution, full-screen videos at up to 30 frames per second. You can also use it to install and run programs from application CD-ROMs and play audio CDs.
- The **eject button** opens the drive tray.
- The **manual eject button** enables you to open the drive tray when the computer is off.

*CAUTION: Never use a pencil to press the manual eject button. Pencil lead can break off inside the computer and damage it. Instead, use a slim object such as a straightened paper clip.*

## Left side

The **cooling vents** prevent the computer's central processing unit (CPU) from overheating so that it can continue to perform at its maximum speed.

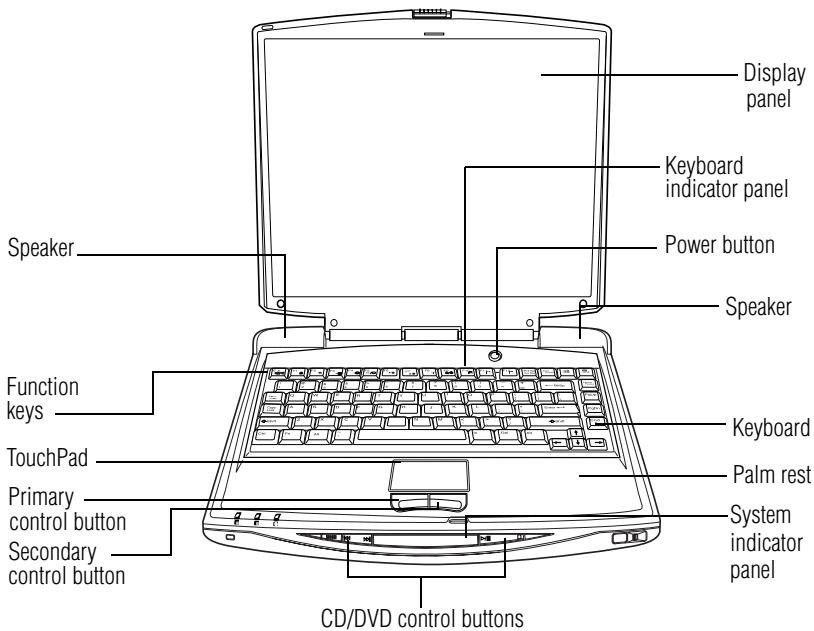

*CAUTION: To prevent possible overheating of the CPU, make sure you do not block the cooling vents.*

The two stacked **PC Card slots** support up to two Type II PC Cards, or one Type III PC Card. See “[Using PC Cards](#)” on [page 167](#) for more information.

The **PC Card eject buttons** release PC Cards from the corresponding slots.

## Front with the display open

The **power button** turns the computer on and off.

The **stereo speakers** let you hear sounds, such as system alarms associated with your software, and music from DVD-ROMs and audio CDs.

The **function keys**, when used with the Fn key, activate several different system functions. For more information, see “[Hot Keys](#)” on page 223.

The **TouchPad™** enables you to move the cursor with the stroke of a finger.

The **Primary control button** next to the TouchPad acts like the primary button on a mouse.

The **Secondary control button** next to the TouchPad acts like the secondary button on a mouse.

---

For more information on Primary and Secondary control buttons, see “[Using the TouchPad™](#)” on page 55.

The **CD/DVD control buttons** allow you to play audio CDs when the computer is turned off. You can also use them to play CDs and DVDs with the computer turned on. For a description of these controls, see “[CD/DVD control buttons](#)” on page 38.

The lights on the **system indicator panel** provide information about system functions. For a description of these lights, see “[System indicator panel](#)” on page 37.

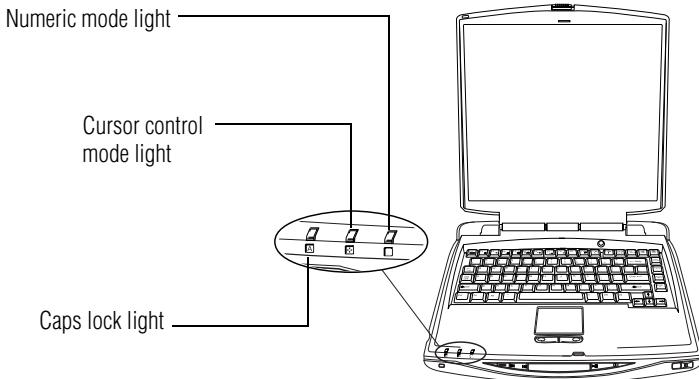

The computer’s **screen** is a liquid crystal display (LCD) that provides clear, sharp images. For more information on your viewing options, see “[Display modes](#)” on page 228.

The lights on the **keyboard indicator panel** provide information about keyboard functions. For details, see “[Keyboard indicator panel](#)” on page 36.

The 85-key **keyboard** provides all the functionality of a full-size keyboard. For more information, see “[Using the keyboard](#)” on page 72.

The front panel provides a **palm rest** to assist you in maintaining proper posture while using the computer.

### Keyboard indicator panel

 The **numeric mode light** glows when the numeric overlay is on. When this light is on, pressing an overlay key types the number printed on the front of the key instead of typing the letter printed on the top of the key.

 The **cursor control mode light** glows when the cursor control overlay is on. When this light is on, pressing an overlay key moves the cursor in the direction of the arrow printed on the front of the key instead of typing the letter printed on the top of the key. For more information, see “[Overlay keys](#)” on page 75.

 **Caps lock light**—The light on the Caps lock key glows when the Caps lock is on.

## System indicator panel

The system indicator lights are under a tinted panel and are visible only when the feature they represent is either on, or both on and active.

The **AC power light** glows green when the computer is connected to an external power source.

The **on/off light** glows green when the computer is on. The light glows amber when the computer is in Standby mode.

The **battery light** indicates the main battery's current charge. It glows green steadily when the battery is fully charged. It glows amber while the battery is being charged. It does not glow if the external power source is disconnected or if the battery is completely discharged. For more information on determining remaining battery power, see “[Monitoring battery power](#)” on page 105.

The **hard disk drive light** flashes green while the hard disk drive is being accessed.

The **disc/disk activity light** flashes green when the DVD-ROM or the Multifunction drive is being accessed.

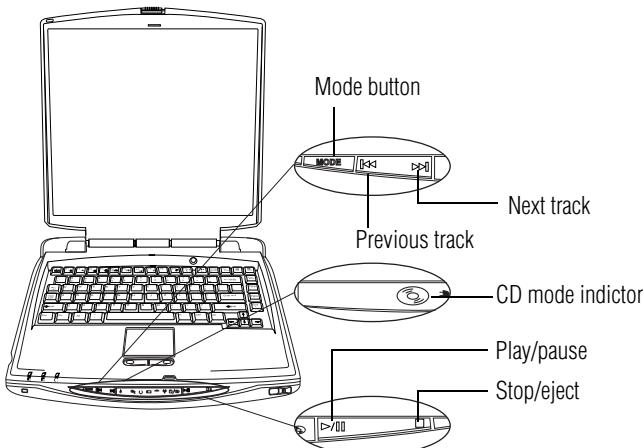

**Wireless indicator light**—Glowes amber to indicate that a wireless device is currently in use.

**CAUTION:** Never turn off the computer while any drive is in use. Doing so could damage the media in use and result in loss of data.

## CD/DVD control buttons

The control buttons near the display latch are for playing CDs and DVDs. You can play audio CDs while the computer is turned off.

*CD/DVD control buttons with CD/DVD mode indicator shown*

The **mode** button enables you to toggle between two modes: digital mode, signified by musical notes graphic on the indicator panel; and CD/DVD mode, signified by a CD disc graphic on the indicator panel.

Press and hold the mode button for a few seconds, until the CD mode indicator lights to show that the CD control buttons on the front panel are now functional.

The **previous track** button returns the disc player to the preceding track on the disc.

►► The **next track** button causes the disc player to skip to the following track on the disc.

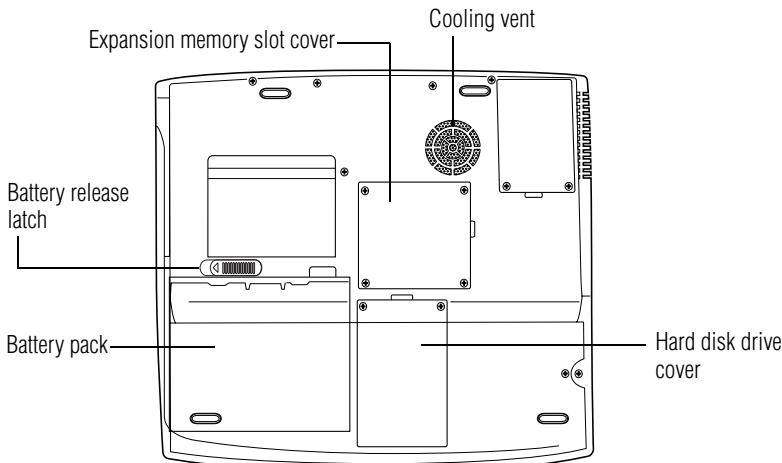

*NOTE: If you have set a password for logging onto your system, your computer starts up and you need to log on before being able to play a CD or DVD.*

▷/□ The **play/pause** button begins play, or pauses the disc player if it is currently playing.

□ The **stop/eject** button stops a disc that is currently playing. To eject the disc press the button again.

Pressing the mode button once more places the computer in digital mode.

## Underside

The **expansion memory slot cover** protects the slots where you insert additional memory. See “[Installing additional memory \(optional\)](#)” on page 57 for detailed information.

---

The **cooling vent** helps keep your computer at an optimum temperature.

---

*CAUTION: To prevent possible overheating of the CPU, make sure you do not block the cooling vents.*

---

- The **battery pack** lets you use your computer when a standard electrical outlet is not available. For information about replacing the battery, see “[Changing the main battery](#)” on page 108.
- The **battery release latch** secures the battery pack to the computer, preventing the pack from dislodging from the computer case.
- The **hard disk drive cover** protects the computer’s hard disk drive.

# Chapter 2

## Getting Started

---

This chapter provides tips for working comfortably, describes how to connect components, and explains what to do the first time you use your notebook computer.

### Selecting a place to work

Your computer is portable and designed to be used in a variety of circumstances and locations.

### Creating a computer-friendly environment

Place the computer on a flat surface that is large enough for the computer and any other items you need to use, such as a printer. Leave enough space around the computer and other equipment to provide adequate ventilation and prevent overheating.

To keep your computer in prime operating condition, protect your work area from:

- ❖ Dust, moisture, and direct sunlight

- ❖ Equipment that generates a strong electromagnetic field, such as stereo speakers (other than speakers that are connected to the computer) or speakerphones
- ❖ Rapid changes in temperature or humidity and sources of temperature change, such as air conditioner vents or heaters
- ❖ Extreme heat, cold, or humidity
- ❖ Liquids and corrosive chemicals

*CAUTION: If you spill liquid into the computer, turn it off, unplug it from the AC power source, and let it dry out completely before turning it on again.*

*If the computer does not operate correctly after you turn it back on, contact a Toshiba authorized service provider.*

## Keeping yourself comfortable

Strain and stress injuries are becoming more common as people spend more time using their computers. With a little care and proper use of the equipment, you can work comfortably throughout the day.

This section provides hints on avoiding strain and stress injuries. For more information, consult books on ergonomics, repetitive-strain injury, and repetitive-stress syndrome.

### Placement of the computer

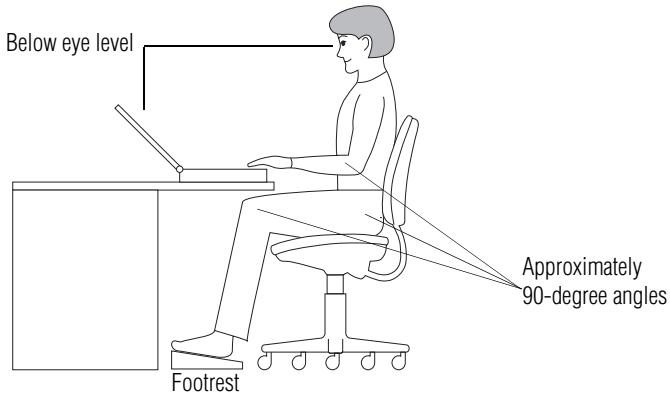

Proper placement of the computer and external devices is important to avoid stress-related injuries.

- ❖ Place the computer on a flat surface at a comfortable height and distance. You should be able to type without twisting your torso or neck, and look at the screen without slouching.

- ❖ If you are using an external monitor, the top of the display should be no higher than eye level.
- ❖ If you use a paper holder, set it at about the same height and distance as the screen.

## Seating and posture

When using your computer, maintain good posture with your body relaxed and your weight distributed evenly. Proper seating is a primary factor in reducing work strain. Some people find a backless chair more comfortable than a conventional chair.

### *Correct posture and positioning of the computer*

Whichever type you choose, use the following guidelines to adjust your chair for maximum computing comfort.

- ❖ Position your chair so that the keyboard is at or slightly below the level of your elbow. You should be able to type comfortably with your shoulders relaxed and your forearms parallel to the floor.

If you are using a conventional chair:

- ❖ Your knees should be slightly higher than your hips. If necessary, use a footrest to raise the level of your knees and ease the pressure on the back of your thighs.

---

- ❖ Adjust the back of your chair so that it supports the lower curve of your spine. If necessary, use a cushion to provide extra back support. Lower-back-support cushions are available at many office supply stores.
- ❖ Sit with your back straight so that your knees, hips, and elbows form approximately 90-degree angles when you work. Do not slump forward or lean back too far.

## **Lighting**

Proper lighting can improve the visibility of the display and reduce eyestrain.

- ❖ Position the display panel or external monitor so that sunlight or bright indoor lighting does not reflect off the screen. Use tinted windows or shades to reduce glare.
- ❖ Avoid placing your computer in front of a bright light that could shine directly in your eyes.
- ❖ If possible, use soft, indirect lighting in your computer work area.

## **Arms and wrists**

- ❖ Avoid bending, arching, or twisting your wrists. Keep them in a relaxed, neutral position while typing.
- ❖ Exercise your hands, wrists, and arms to improve circulation.

*WARNING: Using the computer keyboard incorrectly may result in discomfort and possible injury. If your hands, wrists, and/or arms bother you while typing, stop using the computer and rest. If the discomfort persists, consult a physician.*

---

## Work habits

The key to avoiding discomfort or injury from strain is to vary your activities. If possible, schedule a variety of tasks into your working day. Finding ways to break up the routine can reduce stress and improve your efficiency.

- ❖ Take frequent breaks to change position, stretch your muscles, and relieve your eyes. A break of two or three minutes every half-hour is more effective than a long break after several hours.
- ❖ Avoid performing repetitive activities for long periods. Intersperse such activities with other tasks.
- ❖ Focusing your eyes on your computer screen for long periods can cause eyestrain. Look away from the computer frequently and focus your eyes on a distant object for at least 30 seconds.

## Precautions

Your notebook computer is designed to provide optimum safety and ease of use, and to withstand the rigors of travel. You should observe certain precautions to further reduce the risk of personal injury or damage to the computer.

- ❖ Avoid prolonged physical contact with the underside of the computer.

If the computer is used for long periods, its case can become very warm. While the temperature may not feel too hot to the touch, if you maintain physical contact with the computer for a long time (if you rest the computer on your lap, for example), your skin might suffer low-heat injury.

- ❖ Never apply heavy pressure to the computer or subject it to sharp impacts. Excessive pressure or impact can damage computer components or otherwise cause your computer to malfunction.

---

- ❖ Some PC Cards can become hot with prolonged use. If two cards are installed, both can become hot even if only one is being used. Overheating of a PC Card can result in errors or instability in its operation.

Be careful when you remove a PC Card that has been used for a long period.

- ❖ Avoid spilling liquids into the computer's keyboard.

If you do spill a liquid that gets into the keyboard, turn off the computer immediately, disconnect the AC power adapter, and remove the battery. Leave the computer turned off overnight to let the keyboard dry out before you use it again.

- ❖ Never turn off the computer if a drive-in-use light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk can damage the disk, the drive, or both.

- ❖ Keep the computer and disks away from objects that generate strong magnetic fields, such as large stereo speakers.

Information on disks is stored magnetically. Placing a magnet too close to a disk can erase important files.

- ❖ Scan all new files for viruses.

This precaution is especially important for files you receive via diskette, email, or download from the Internet. Occasionally, even new programs you buy from a supplier may contain a computer virus. You'll need a special program to check for viruses. Ask your dealer to help you.

## Setting up your computer

Your computer contains a rechargeable high-capacity battery that needs to be charged before you can use it.

To use external power or to charge the battery, attach the AC adapter. See “[Connecting the AC adapter](#)” on page 50.

## Setting up your software

The first time you turn on your computer, the Setup Wizard guides you through steps to set up your software.

- 1 From the welcome screen, click **Next** to enter the Setup Wizard.
- 2 Confirm acceptance of Microsoft’s End User License Agreement and click **Next**.
- 3 Enter the computer name and description and click **Next** or **Skip**.

The computer will pause for a moment while checking for an internet connection.

A window will display the message: “An Internet connection could not be chosen.”

- 4 Click **Skip** to exit the process or **Next** to continue.

*NOTE: To register online, you must be connected to the Internet via your computer’s modem and a voice-grade telephone line, or a Local Area Network.*

A window will display asking if you wish to register with Toshiba and Microsoft.

---

- 5 Click **Yes** to register, or **No** to exit the process.

---

*NOTE: If you click No, you may register with Toshiba by clicking the Register with Toshiba icon on the desktop.*

---

- 6 Enter your personal information in the registration window.
- 7 Enter your name and click **Finish** to complete the process.

Your computer restarts automatically.

## Registering your computer with Toshiba

Registering your computer lets Toshiba keep you up-to-date with information about new products and upgrades, and also extends your Toshiba warranty worldwide at no charge to you. You can register your computer with Toshiba by double-clicking the icon on your desktop.

*NOTE: To register online, you must be connected to the Internet via your computer's modem and a voice-grade telephone line, or a Local Area Network.*

---

## Completing installation

Upon completion, you will be prompted to click **Finish** to restart your computer.

---

## Adding external devices

---

*NOTE: Before adding external devices, Toshiba recommends setting up your software first. See “[Setting up your software](#)” on page 47.*

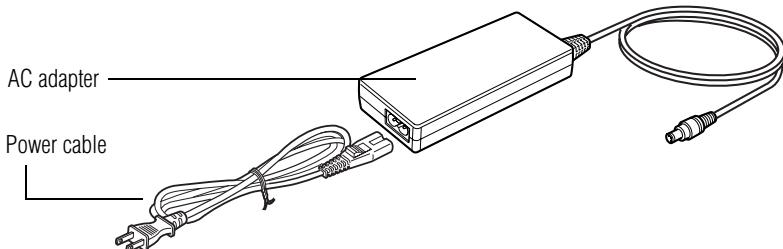

---

Before starting to use your computer, you may also want to:

- ❖ Add more memory (see “[Installing additional memory \(optional\)](#)” on page 57)
- ❖ Connect a full-size keyboard (see “[Using an external keyboard](#)” on page 61)
- ❖ Connect an external monitor (see “[Using external display devices](#)” on page 65)
- ❖ Connect a local printer (see “[Connecting a printer](#)” on page 61)
- ❖ Connect an external diskette drive (see “[Connecting an external diskette drive](#)” on page 64)
- ❖ Install PC Cards (see “[Using PC Cards](#)” on page 167)

## Connecting the AC adapter

The AC adapter enables you to power the computer from an AC outlet and to charge the computer's batteries. The AC power light on the computer glows when the device is plugged in.

*Power cable and AC adapter*

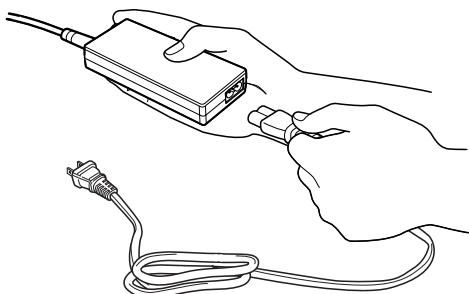

**CAUTION:** Use only the AC adapter supplied with your computer or an equivalent adapter that is compatible. Use of any incompatible adapter could damage your computer. Toshiba assumes no liability for any damage caused by use of an incompatible adapter.

When you connect the AC adapter to the computer, always follow the steps in the exact order as described in the User's Manual. Connecting the power cable to a live electrical outlet should be the last step; otherwise the adapter DC output plug could hold an electrical charge and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.

To connect AC power to the computer:

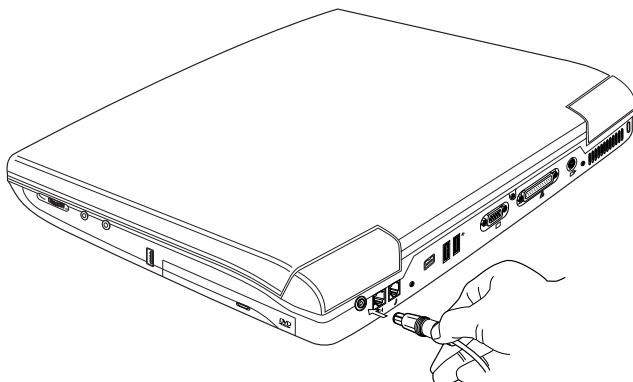

- 1** Connect the power cable to the AC adapter.

*Connecting the power cable to the AC adapter*

- 2** Plug the AC adapter into the DC-IN jack on the back of the computer.

*Connecting the adapter to the computer*

- 3** Connect the power cable to a live electrical outlet.  
The AC power and battery lights glow.

**DANGER:** Damaged power cables can cause fire or electric shock. Never modify, forcibly bend, place heavy objects on top of, or apply heat to the power cable.

*If the power cable becomes damaged or the plug overheats, discontinue use. There is a risk of electric shock.*

*Never remove the power plug from the outlet with wet hands. Doing so can cause an electric shock.*

---

**CAUTION:** Using the wrong AC adapter could damage your computer. Toshiba assumes no liability for any damage in such cases.

*Never pull directly on the power cable to unplug it. Hold the power plug when removing the cable from the outlet.*

---

## Charging the battery

Before you can use the battery to power the computer, you must charge it. Connect the computer to a live power outlet using the AC adapter and power cable. The on/off light glows green and the battery light glows amber to show that it is charging.

Once the computer is connected to a power outlet, you can charge the battery with the computer turned off or on. It takes several hours to charge the battery when the computer is off. It takes much longer to charge the battery when the computer is on. If the computer is not consuming full power, the time required to charge the battery is reduced.

For more information on battery use, see “[Running the computer on battery power](#)” on page 102.

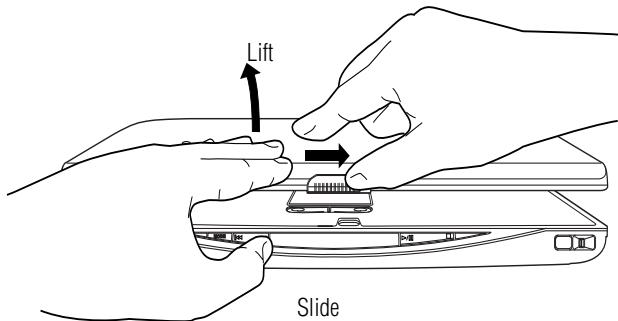

*CAUTION: Once the battery is charged for the first time, avoid leaving the computer plugged in and turned off for more than a few hours at a time. Continuing to charge a fully charged battery can damage the battery.*

## Using the computer for the first time

### Opening the display panel

Slide the display latch to the right and lift the display panel.

*Opening the display panel*

*CAUTION: To avoid damaging the display panel, don't force it beyond the point where it moves easily.*

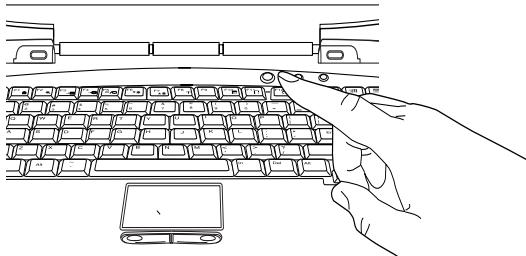

*Never lift or move the computer using the display panel.*

### Turning on the power

- 1 Check that all the drives are empty.
- 2 If you have a printer connected to your computer, turn on the printer and wait until the printer indicates that it is ready (on line).

3 Turn on the computer by pressing the power button located above the keyboard.

*Pressing the power button*

*NOTE: When you turn on the computer for the first time, don't turn off the power again until the operating system has loaded completely.*

The AC power light glows when the computer is connected to an external power source.

The battery light:

- ❖ Glows amber while the battery is being charged.
- ❖ Glows green when the battery is fully charged.
- ❖ Is not lit when the computer is not connected to an external power source. For information on determining battery power, see “[Monitoring battery power](#)” on page 105.

The hard disk drive light flashes to indicate that the hard disk drive is currently in use.

*CAUTION: Never turn off the computer while any drive is in use.*

## Using the TouchPad™

The TouchPad, the small, smooth square cutout located in front of the keyboard, is sensitive to touch and enables you to move the cursor with the stroke of a finger. Simply move your finger on the TouchPad in the direction you'd like to move the cursor:

- ❖ To move the cursor to the top of the page, push your finger forward on the TouchPad.
- ❖ To move the cursor to the bottom of the page, drag your finger toward yourself.
- ❖ To move the cursor to the right side of the page, slide your finger across the TouchPad from left to right.
- ❖ To move it to the left side, slide your finger from right to left.

*NOTE: Because the TouchPad is much smaller than the display screen, moving your cursor across the screen often means having to move your finger several times across the TouchPad in the preferred direction.*

Once you've positioned your cursor, you can either click it into place by double-tapping the TouchPad or clicking the control buttons. For more on the TouchPad, see “[Lesson 2: Using the TouchPad and control buttons together](#)” on page 119.

## Primary and secondary control buttons

When you want to click or choose an item, use the TouchPad to move the pointer/cursor to the item. Once the pointer/cursor is positioned, you can click it into place by either double-tapping the TouchPad or clicking the control buttons.

The control buttons are adjacent to the TouchPad and are used like the buttons on a mouse. The primary control button is the

---

left one and corresponds to the left mouse button. To double-click, press the primary button twice in rapid succession.

The function of the secondary button depends on the program you are using. It usually corresponds to the right mouse button. Check your program's documentation to find whether it uses the secondary mouse button.

## Disabling or enabling the TouchPad

The TouchPad is enabled by default. To change the enable/disable TouchPad setting:

- 1 Click **Start, Control Panel**.

The Control Panel window appears.

- 2 Click **Printers and Other Hardware**.

- 3 Click **Mouse Properties**.

The Mouse Properties window appears.

- 4 Click the **TouchPAD ON/OFF** tab.

The TouchPAD ON/OFF tab view window appears.

- 5 Select **Disable** or **Enable**, whichever is appropriate.

- 6 Click **Apply**.

- 7 Click **OK**.

The Mouse Properties window closes.

- 8 Close the Printers and Other Hardware window.

- 9 Close the Control Panel window.

You can also use a hot key to disable or enable the TouchPad. For more information, refer to “[Disabling or enabling the TouchPad](#)” on page 229.

# Setting up other devices

## Installing additional memory (optional)

Your computer comes with enough memory to run most of today's popular applications. You may want to increase the computer's memory if you use complex software or process large amounts of data.

Your computer is equipped with two memory slots, which are available for you to add additional memory modules of either 128, 256, and 512 MB capacity.

You need a standard Phillips no. 1 screwdriver to install a memory module.

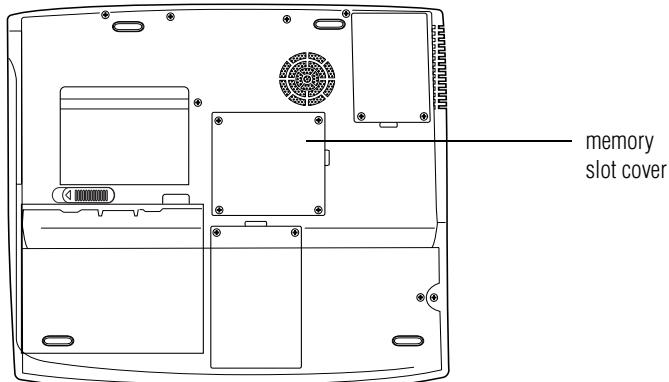

*CAUTION: To avoid damaging the computer's screws, use a standard Phillips no. 1 screwdriver that is in good condition.*

If the computer is on, begin at step 1; otherwise, skip to step 4.

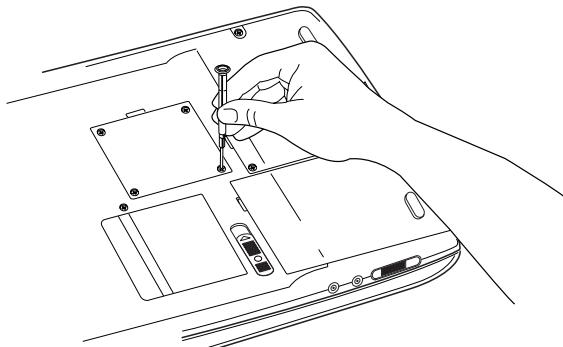

- 1 If the computer is on, click **Start**, **Turn Off Computer**.  
The Turn off computer window appears.
- 2 Click **Turn Off**.  
The operating system turns off the computer.
- 3 Unplug and remove any cables connected to the computer.
- 4 Remove the battery. For steps on removing the battery, see “[Changing the main battery](#)” on page 108.

5 Close the display panel and turn the computer upside down to locate the expansion memory slot cover to the empty memory slots.

*Base of the computer*

6 Using a standard Phillips no. 1 screwdriver, unscrew the four screws that secure the memory slot cover, and then remove the memory slot cover.

*Removing the memory slot cover screws*

7 Put the screws and the cover in a safe place so that you can retrieve them later.

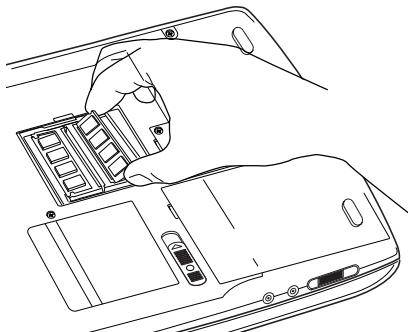

*CAUTION: Static electricity can damage the memory module. Before you handle the module, touch a grounded metal surface to discharge any static electricity you may have built up.*

*To avoid damaging the memory module, be careful not to touch its gold connector bar (on the side you insert into the computer).*

- 8 Remove the new memory module from its antistatic packaging.
- 9 Holding the memory module by its edges so that the gold connector bar faces the slot, fit the module into the socket.
- 10 Gently press down on the memory module connector until the clips snap into place.

Do not force the module into position. The memory module should be level when secured in place.

*Inserting the memory module*

*CAUTION: Avoid touching the connectors on the memory module or on the computer. Grease or dust on the connectors may cause memory access problems.*

---

- 11 Replace the memory slot cover.
- 12 Replace the screws and tighten them.
- 13 Replace the battery.
- 14 Turn the computer over and reconnect any cables you removed.
- 15 To verify that the computer correctly recognizes the memory:
  - ❖ Click **Start**, then click **Control Panel**.
  - ❖ Click the **Performance and Maintenance** icon.
  - ❖ Click **System**.
  - ❖ The **General** tab view automatically appears and shows the recognized memory.
- 16 If the computer does not recognize the memory, turn off the computer, remove the memory slot cover, and make sure the memory module is seated properly, as described in step 10.

## Removing a memory module

- 1 Follow steps 1 through 6 in “[Installing additional memory \(optional\)](#)” on page 57.
- 2 Gently push the memory locks outward until the memory module pops up.
- 3 Gently pull the memory module diagonally out of the slot.
- 4 Complete the procedure by following steps 11 through 15.

## Using an external keyboard

If you prefer to use a full-size keyboard, you can attach one to your computer provided that the keyboard is USB-compatible.

To connect a keyboard, attach its cable to one of the computer's USB ports.

## Connecting a printer

*NOTE: Read the documentation that came with your printer. Follow the manufacturer's instructions when connecting a local printer.*

*NOTE: You must supply the proper printer cable. If one did not come with your printer, you may purchase one from an electronics or computer store.*

*If your printer is ECP- or IEEE-compliant, make sure your printer cable is an IEEE 1284 cable.*

*CAUTION: Your printer documentation may require you to install the printer software before physically connecting the printer to your computer. If you do not install the software as instructed by the printer manufacturer, the printer may not function correctly.*

*CAUTION: Never connect the printer cable while the computer's power is on. Doing so may damage the printer, the computer, or both.*

## Connecting a USB printer

You can connect a USB-compatible printer to your computer through the USB ports. To determine if the printer is USB-compatible, check its documentation.

To make the connection, you need a suitable USB cable, which may come with your printer. You can purchase one from a computer or electronics store.

To connect a printer:

- 1** Connect the USB cable to the USB port.
- 2** Connect the printer's power cable to a wall outlet.
- 3** Turn on the printer.

## Connecting a parallel printer

To make the connection, you need a suitable cable, which may come with your printer. Otherwise, you can purchase one from a computer or electronics store.

*NOTE: Follow the manufacturer's instructions for connecting a parallel printer to your computer.*

## Setting up the printer

If you started your computer with a printer connected and turned on, it may have been detected automatically. If this is not the case, then you must install the printer driver for the model of printer that is connected to your computer. You install the printer driver either by following the instructions indicated in your printer manual, or by using the operating system's Add Printer Wizard.

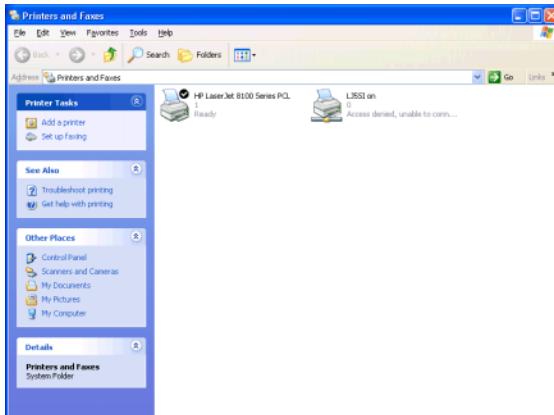

If you plan to set up a printer later, click **Cancel**.

## Using the Add Printer Wizard

To set up a printer with the Add Printer Wizard:

- 1 Click Start, Control Panel.**
- 2 Click Printers and Other Hardware.**
- 3 Click Printers and Faxes.**

The Printers and Faxes window appears.

*Sample Printers and Faxes window*

- 4 Click Add a Printer.**

The Add Printer Wizard window appears.

*Sample Add Printer Wizard*

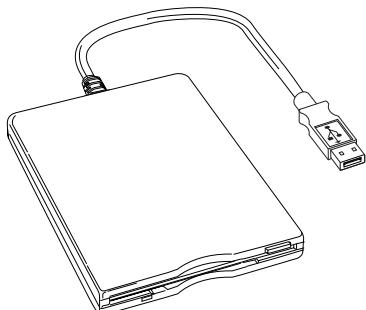

**5** Follow the instructions.

*HINT: If you are using more than one printer, make sure the printer name is descriptive enough to help you tell the difference between other printers.*

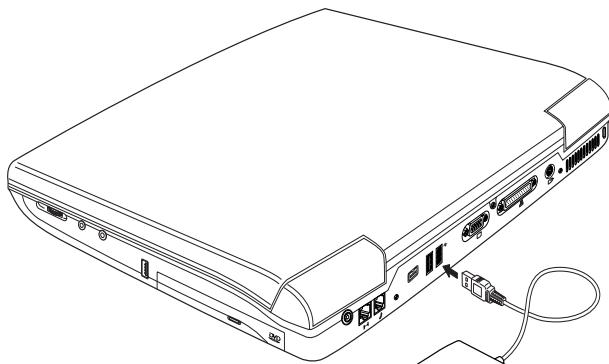

## Connecting an external diskette drive

Some operations, such as creating a password service diskette, require a diskette drive designed for use with 3.5-inch diskettes.

*An optional external USB diskette drive*

To connect an optional external USB diskette drive, connect the cable to one of the USB ports.

*Connecting an optional external USB diskette drive*

## Using external display devices

Your computer comes with a built-in LCD display, but you can easily attach an external monitor to your computer if you need a larger screen. To do this:

- 1 Turn off the computer.
- 2 Connect the monitor's video cable to the RGB (monitor) port on the rear of the computer.
- 3 Connect the monitor's power cable to a live electrical outlet.
- 4 Turn on the external monitor.
- 5 Turn on the computer.
- 6 Set the display mode by pressing Fn + F5, or by setting the Display Properties settings.

## Directing the display output when you turn on the computer

Once you've connected an external display device, you can choose to use the internal display only, the external device only, or both simultaneously. The quickest way to change the display output settings is to use the display hot key (Fn + F5).

- 1** While holding down Fn, press F5 repeatedly until the setting you want takes effect.

This hot key cycles through the settings in the following order:

- ❖ Built-in display panel only
- ❖ Built-in display panel and external monitor simultaneously
- ❖ External monitor only
- ❖ Built-in display panel and external video device simultaneously
- ❖ Other external video device only

- 2** Release the Fn key.

---

*NOTE: You can also change these settings using the Display Properties box in the Control Panel.*

---

## Adjusting the quality of the external display

To obtain the best picture quality from your external display device, you may need to adjust the video settings. See the documentation supplied with the device for additional configuration steps.

*TECHNICAL NOTE: In order to use the simultaneous mode, you must set the resolution of the internal display panel to match the resolution of the external display device. The external display device must support a resolution of 800 X 600 or higher.*

## Display limitations

The quality of the display is limited to the capabilities of the external video device.

- ❖ If the external video device, such as an SVGA monitor, is capable of displaying at a maximum resolution of 800 x 600 and your system is set for a higher resolution, only part of the desktop will appear on the screen. You can view the “lost” area by scrolling to it.
- ❖ If you use the display hot key (**Fn + F5**) to change the display output with the **LCD Display Stretch** option enabled and the Display area (resolution) set to 800 x 600, the image on the internal display panel may appear stretched.

## Turning off the computer

It is a good idea to turn off your computer when you are not using it for a while.

If you are using the computer for the first time, leave the computer plugged into a power source (even though the computer is off) to fully charge the main battery. With the computer off, it may take several hours to recharge the main battery.

Guidelines for turning off the computer:

- ❖ To leave the computer off for a longer period, use the Windows® Turn Off command. Alternatively, use Hibernation mode to save the system settings to the hard disk.

---

- ❖ If you have work in progress and are not connected to a network, use the operating system Standby command to save your system settings to memory so that, when you turn on the computer again, you automatically return to where you left off.
- ❖ Never turn off the power while a drive-in-use light on the system indicator panel is on. Doing so may damage your hard disk, DVD-ROM or Multifunction drive.

For more information, see “[Powering down the computer](#)” on page 92.

## Caring for your computer

This section gives tips on cleaning and moving your computer, and explains how to fit an antitheft lock. For information about taking care of your computer’s battery, see “[Running the computer on battery power](#)” on page 102.

### Cleaning the computer

To keep your computer clean, gently wipe the display panel and exterior case with a lightly dampened cloth. Ask your Toshiba dealer for suggestions for appropriate cleaning products.

*CAUTION: Keep liquid, including cleaning fluid, out of the computer’s keyboard, speaker grille, and other openings. Never spray cleaner directly onto the computer. Never use harsh or caustic chemical products to clean the computer.*

---

## Moving the computer

Before moving your computer, even across the room, make sure all disk activity has ended (the drive-in-use lights stop glowing) and all external peripheral cables are disconnected.

*CAUTION: Never pick up the computer by its display panel or by the back (where the ports are located).*

Although your notebook computer is built to withstand reasonable shock and vibration, transport it in a carrying case for long trips. You can purchase a carrying case from your Toshiba dealer or through Toshiba's Web site at [toshiba.com](http://toshiba.com).

## Using a computer lock

You may want to secure your computer to a heavy object such as your desk. The easiest way to do this is to purchase an optional Port Noteworthy® computer lock cable.

*Port Noteworthy® computer lock cable*

To secure the computer:

- 1 Loop the cable through or around some part of a heavy object.

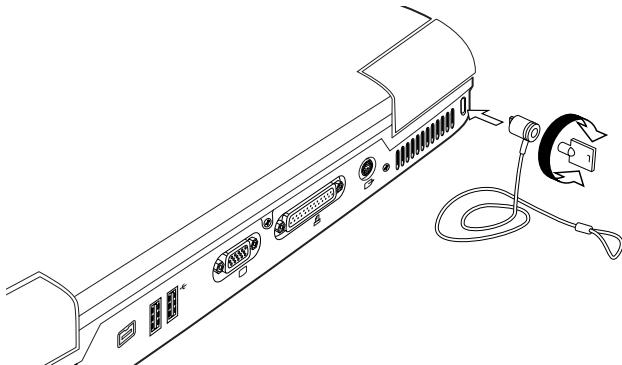

Make sure there is no way for a potential thief to slip the cable off the object.

- 2 Pass the locking end through the loop.

**3** Insert the cable's locking end into the security lock slot located on the right side of the computer, then rotate the key a quarter turn and remove it.

The computer is now securely locked to deter theft.

*Locking the computer*

# Chapter 3

## Learning the Basics

---

This chapter lists some computing tips and provides important information about basic features.

### Computing tips

- ❖ Save your work frequently.

Your work stays in the computer's temporary memory until you save it to the disk. You will lose all unsaved work, if, for example, a system error occurs and you must restart your computer, or your battery runs out of charge while you are working. Your computer can be configured to warn you when the battery is running low. See “[Setting battery alarms](#)” on page 108.

---

*HINT: Some programs have an automatic save feature that you can turn on. This feature saves your file to the hard disk at preset intervals. See your software documentation for details.*

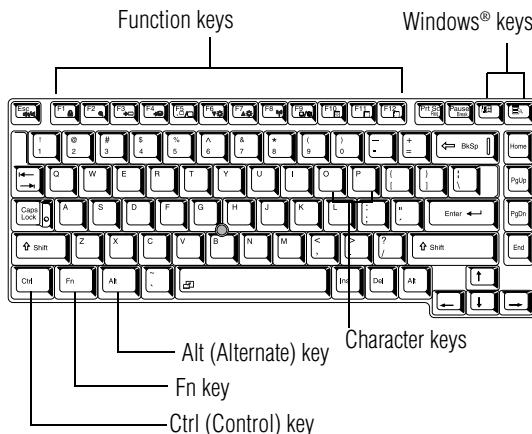

---

- ❖ Back up your files to diskettes (or other removable storage media) on a regular basis. Label the backup copies clearly and store them in a safe place.  
If your hard disk suddenly fails, you may lose all the data on it unless you have a separate backup copy.
- ❖ Use Disk Defragmenter to conserve disk space and help your computer perform at its optimal level.
- ❖ Before turning off the computer, always use the Turn Off command (unless you want to use Standby or Hibernation mode as described in “[Powering down the computer](#)” on page 92).

*CAUTION: The operating system records information, such as your desktop setup, during its turn-off procedure. If you don't let it turn off normally, details such as new icon positions may be lost.*

## Using the keyboard

*Parts of the keyboard*

## Character keys

Typing with the character keys is very much like typing on a typewriter, except that:

- ❖ The spacebar creates a space character instead of just passing over an area of the page.
- ❖ The lowercase letter l (el) and the number 1 are not interchangeable.
- ❖ The uppercase letter O and the number 0 are not interchangeable.
- ❖ The Caps Lock key changes only the alphabet keys to upper case — the number and symbol keys are not affected.

## Making your keyboard emulate a full-size keyboard

Although your computer's keyboard layout is compatible with a standard full-size keyboard, it has fewer keys.

A standard full-size keyboard has two Enter, Ctrl, and Alt keys, editing keys, cursor positioning keys, and a numeric keypad. Pressing the Fn key simultaneously in combination with one of the specially marked keys allows you to emulate a full-size keyboard.

Your computer's keyboard has only one Enter and one Ctrl key. Most of the time this doesn't matter. However, some programs assign separate functions to the right and left Ctrl and Alt keys, or to the regular and numeric pad Enter keys on the full-sized keyboard. Using the Fn key you can simulate these separate keys, as follows:

- ❖ Press Fn and Ctrl simultaneously to simulate the Ctrl key on the right side of the enhanced keyboard.
- ❖ Press Fn and Enter simultaneously to simulate the Enter key on the numeric pad of the enhanced keyboard.

## Ctrl, Fn, and Alt keys

### *Ctrl, Fn and Alt keys*

The Ctrl, Fn, and Alt keys do different things depending on the program you are using. For more information, see your program documentation.

## Function keys

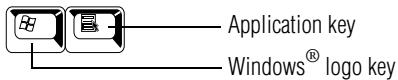

The function keys (not to be confused with the Fn key) are the 12 keys at the top of the keyboard.

### *Function keys*

F1 through F12 are called function keys because they run programmed functions when you press them. Used in combination with the Fn key, function keys marked with icons run specific functions on the computer. For more information, refer to Appendix A.

## Windows® special keys

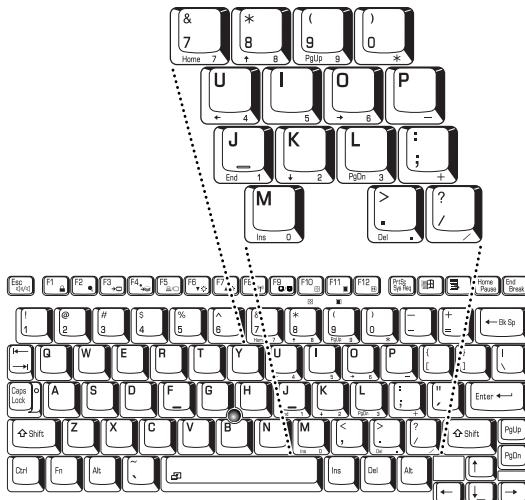

### *Windows® special keys*

The keyboard provides two keys that have special functions in the operating system:

- ❖ The Windows® logo key opens the Start menu.
- ❖ The Application key has the same function as the secondary (or right mouse) control button.

## Overlay keys

*Sample keyboard overlay keys*

The keys with numbers and symbols on the front of them form the numeric and cursor overlay. This overlay lets you enter numeric data or control the cursor as you would using the ten-key keypad on a desktop computer's keyboard.

## Using the numeric keypad overlay

To turn on the numeric keypad overlay, press Fn and F11 simultaneously. The numeric mode light on the keyboard indicator panel glows when the numeric overlay is on.

You can still use the overlay keys to type alphabetic characters while the numeric overlay is on. To do so:

- ❖ For lowercase letters, hold down Fn while you type the letters.
- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

---

To use the cursor control overlay when the numeric overlay is on, press and hold down Shift while you use the cursor control keys. To return to the numeric overlay, release Shift.

To turn off the numeric keypad overlay, hold down the Fn key and press F11 again. The numeric mode light on the keyboard indicator panel goes out.

## Using the cursor control overlay

To turn on the cursor control overlay, press Fn and F10 simultaneously. The cursor control mode light on the keyboard indicator panel glows when the cursor control overlay is on.

To type alphabetic characters while the overlay is on:

- ❖ For lowercase letters, hold down Fn while you type the letters.
- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

To use the numeric keypad overlay when the cursor control overlay is on, hold down Shift while you use the numeric overlay keys. To return to the cursor control overlay, release Shift.

To turn off the cursor control overlay, hold down the Fn key and press F10 again. The cursor control mode light on the keyboard indicator panel goes out.

## Starting a program

The easiest way to start a program is to click the name of the file that contains the information you want to work on. To find the file, use My Computer or Windows® Explorer.

If you prefer to open the program first, you have four options:

- ❖ Double-click the icon for the program on your desktop
- ❖ Use the Start menu

- ❖ Use Windows® Explorer or My Computer to locate the program file
- ❖ Use the Run dialog box

The Windows® XP operating system's tutorial chapter gives step-by-step instructions for starting a program from the Start menu. See “[Lesson 6: Starting programs](#)” on page 126.

## Saving your work

Before you turn off the computer, save your work to the hard disk drive or a diskette. This is one of the most important rules of computing.

*NOTE: Save your data even when you are using the Standby command, in case the battery discharges before you return to work. Your computer can be configured to warn you when the battery is running low, see “[Setting battery alarms](#)” on page 108.*

Many programs offer a feature that saves documents at regular intervals, such as every 15 minutes. Check your programs' documentation to see whether they have an automatic save feature.

To save:

- ❖ A file you are updating, open the program's **File** menu and click **Save**.
- ❖ A new file, choose **Save As** from the **File** menu, type a name for the file, and click **OK**.

*HINT: To make another copy of the file you are currently working with, choose **Save As** from the **File** menu and give the new file a different name.*

For information on how to name a file, see “[Windows® XP file system](#)” on page 118.

## Printing your work

Verify that the operating system is set up for your printer as described in “[Connecting a printer](#)” on page 61.

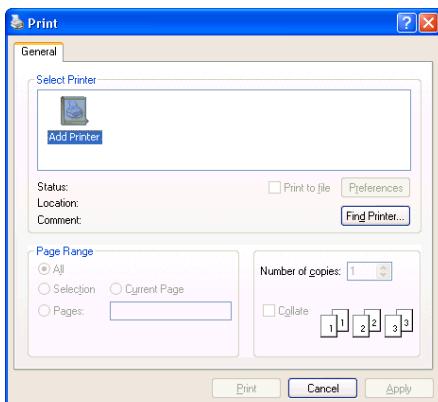

*TECHNICAL NOTE: You only need to set up the printer the first time you connect it. If you use more than one printer or are changing printers, you will need to set up the operating system to run with the additional printer(s).*

To print a file:

- 1 If your printer is not on, turn it on.
- 2 In the **File** menu of your Windows® program, click **Print**.

The program displays a Print dialog box.

*Sample Print dialog box*

- 3 Select a printer, as necessary (if you have multiple printers installed).
- 4 Click **Print**.

## Backing up your files

Backing up your files means copying individual files to a diskette or copying entire sections of your hard disk to another device, such as a tape drive.

### Copying to an optional diskette drive

- 1 Insert a diskette into the optional external diskette drive.
- 2 Click **Start**.  
The Start menu appears.
- 3 Click **My Computer**.  
The My Computer window appears.
- 4 Double-click the drive that contains the file you want to copy.
- 5 Double-click the folder that contains the file, then click the file you want to copy.

*HINT: You can use the Ctrl or Shift keys to select more than one file. To select multiple consecutive files, hold down the Shift key and click the first and then the last file (all files within that range will be highlighted). To select non-consecutive files, hold down the Ctrl key and click the individual files you want to select.*

- 6 Right-click the mouse, select **File**, then click **Send To**.
- 7 Click the icon for the diskette drive (3 1/2 floppy [A:]).

*HINT: You can also back up a file to an optional diskette by clicking the file (or files) you want to backup with the secondary button, then pointing to Send To and clicking 3 1/2 Floppy (A:). For more information, refer to “[Connecting an external diskette drive](#)” on page 64.*

---

## Using the DVD-ROM or Multifunction drive

Optical storage has become the preferred medium for software, music, and video. Digital versatile discs (DVDs) provide a significant increase in data storage and support features that are not available on any other video platform. These features include wide-screen movies, multiple language tracks, digital surround sound, multiple camera angles, and interactive menus.

For these reasons, your computer may come with a DVD-ROM drive or Multifunction drive that allows you to:

- ❖ Play prerecorded DVDs
- ❖ Play prerecorded CDs
- ❖ Read and write files (including music) to a CD-Recordable (CD-R) or CD-ReWritable (CD-RW) disc
- ❖ Read and write files (including music) to a DVD-Recordable (DVD-R) or DVD-ReWritable (DVD-RW) disc
- ❖ DVD-RAM

---

*CAUTION: Check the disc activity light when you use the DVD-ROM or Multifunction drive. Do not press the eject button, disconnect a drive or turn off the computer while the light is glowing. Doing so could damage the CD, DVD or the drive.*

---

*NOTE: For optimum DVD performance, it is recommended that you play DVDs while running on AC power rather than battery power.*

---

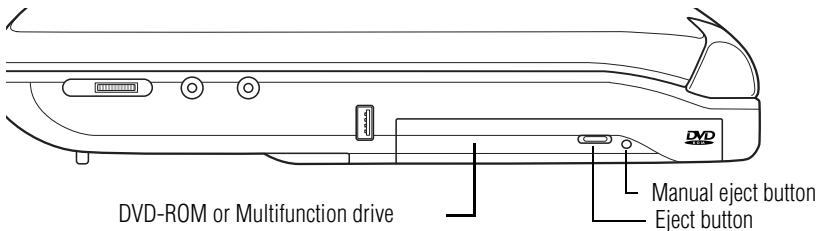

You use DVD-ROMs or CDs to load and run software, and to access reference material such as catalogs, as well as listen to music.

A special feature allows you to play audio CDs even when the computer is turned off. For more information, see “[CD/DVD control buttons](#)” on page 82.

## Drive components and control buttons

The DVD-ROM or Multifunction drive is on the right side of the computer. The CD/DVD control buttons are located at the front edge of the computer and can be accessed when the display panel is closed or open.

### Components

#### DVD-ROM or Multifunction drive

Use the eject button to release the disc tray. This button requires power to operate.

*CAUTION: Never press the eject button or turn off the computer while the activity light is glowing. Doing so could damage the disc or the drive.*

The manual eject button allows you to manually open the disc tray when power to the computer and the drive is off.

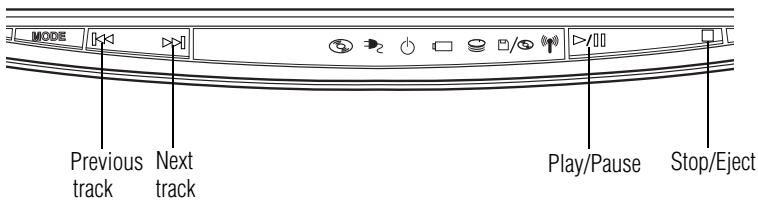

*CAUTION: Never use a pencil to press the manual eject button. Pencil lead can break off inside the computer and damage it. Instead, use a slim object such as a straightened paper clip.*

*HINT: When the computer is off and the DVD-ROM or Multifunction drive is on, press the stop/eject control button to eject a disc. The computer needs to be in CD/DVD mode for this command to work properly.*

## CD/DVD control buttons

The control buttons on the front edge of the computer enable you to play audio CDs when the computer is off. You can also use them to play CDs and DVDs when the computer is on.

### *CD/DVD control buttons in front of the computer*

The **mode** button switches between the CD/DVD and digital audio modes. You can lock the mode to its current setting by pressing and holding the mode button for four seconds. When the mode button is locked, you cannot switch between the CD/DVD and digital audio modes. To unlock the mode button, press and hold it for four seconds.

- ◀ The **previous track** button returns to the preceding track on the disc.
- ▶ The **next track** button skips to the following track on the disc.
  - ❖ Mode - The left side of the indicator panel displays one of the following icons depending on what mode your computer is in:

CD/DVD control

---

-  Digital audio
-  The **play/pause** button starts playing the disc or makes it pause if currently playing.
-  The **stop/eject** button stops a disc that is currently playing.  
You can eject a disc by pressing the stop/eject button twice. Use this method to eject a disc when the computer is turned off and the sound subsystem is turned on.

## **CD/DVD control and digital audio control**

The following chart describes CD/DVD control and digital audio mode.

	<i>CD /DVD Mode</i>	<i>Digital Audio Mode</i>
<b>Power is off and you press Play/Pause</b>	If a CD is in the drive, the system enters CD player mode and operates as a stand-alone CD player.  If a DVD movie is in the drive, the operating system starts, WinDVD starts and the DVD begins to play.	The operating system starts, the Media Player starts and the digital audio file begins to play.
<b>While in CD/DVD mode, you press the mode button</b>	DVD-ROM drive power turns off	

---

	<i>CD /DVD Mode</i>	<i>Digital Audio Mode</i>
<b>Power is off and you press Play/Pause</b>	If a CD is in the drive, the system enters CD player mode and operates as a stand-alone CD player.  If a DVD movie is in the drive, the operating system starts, WinDVD starts and the DVD begins to play.	The operating system starts, the Media Player starts and the digital audio file begins to play.
<b>Operating system is running and you press Play/Pause</b>	If a CD is in the drive, the Media Player starts and the digital audio file begins to play.  If a DVD movie is in the drive, WinDVD starts and the DVD begins to play.	Media Player starts and the digital audio file begins to play.

## Inserting a disc

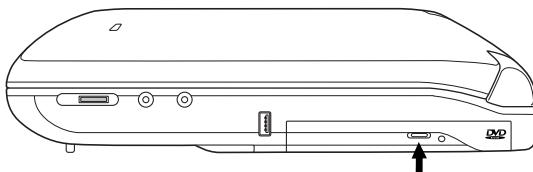

---

*WARNING: Before playing an audio CD or a DVD, turn the volume down. Playing the disc at maximum volume could damage your ears. To turn the volume down, use the volume control dial or access the Volume Control program (click **Start, All Programs, Accessories, Entertainment, Volume Control**).*

---

- 1 If the computer is turned on, press the eject button on the DVD-ROM or Multifunction drive.

*Pressing the eject button*

The disc tray partially opens.

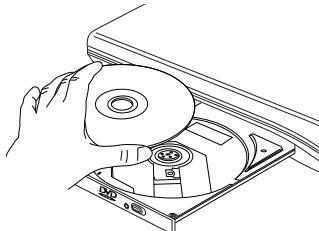

*CAUTION: To avoid damaging a disc or losing data, check that the disk activity light is off before opening the disc tray.*

- 2** Grasp the disc tray and pull it fully open.
- 3** Hold the disc by its edges and check that it is clean and free of dust.

*CAUTION: Handle discs carefully. Avoid touching the surface of the disc. Grasp it by its center hole and edge. If you handle the disc incorrectly, you could lose data.*

- 4** Carefully place the disc in the empty tray with its label facing up.

*Inserting a disc*

*CAUTION: Be careful not to touch the drive's lens (located underneath the drive's spindle) or the area around it. Doing so could cause the drive to malfunction.*

**5** Gently press the center of the disc onto the spindle until it locks into place.

### *Positioning the disc on the spindle*

*CAUTION: Make sure the disc is properly positioned on the spindle. If you position the disc incorrectly, it can jam the disc tray.*

**6** Close the disc tray by pressing gently on the center of the tray until it clicks, indicating that it is locked.

## **Removing compact discs**

To remove a compact disc (CD or DVD) with the computer turned on:

---

- 1** Press the eject button on the drive.

---

*CAUTION: Do not press the eject button while the in-use indicator light is glowing. Doing so could damage the disc or the drive.*

*Also, if the disc is still spinning when you open the disc tray, wait for it to stop spinning before you remove it.*

---

- 2** Pull the tray until it is fully open, remove the disc, and place it in its protective cover.

- 3** Gently push the tray in to close it.

To remove a compact disc with the computer turned off:

- 1** Insert a slender object, such as a straightened paper clip, into the manual eject hole.
- 2** Gently pull the tray out until it is fully open, remove the disc, and place it in its protective cover.
- 3** Gently push the tray in to close it.

## Playing an audio CD

Insert an audio CD and close the disc tray.

To access the Windows Media™ Player, you can open it through the Start menu or double-click the icon on the desktop.

The first time you start the Windows Media Player, it will display in Toshiba Skin mode.

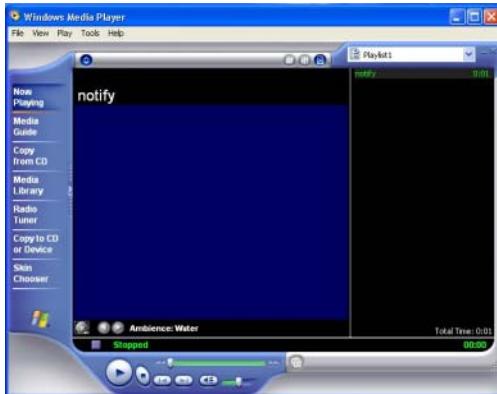

*Sample Windows Media™ Player Toshiba Skin*

You may switch the Media Player window to full mode one of two ways:

- ❖ Click on the center of the desktop icon for the player, and select **Switch to full mode** from the pop-up menu.
- ❖ Right-click anywhere on the player, and select **Switch to full mode** from the pop-up menu.

*Sample Windows Media<sup>TM</sup> Player screen*

The Windows Media<sup>TM</sup> Player control panel works much like an ordinary compact disc player:

- ❖ To play the CD or to pause, click the **Play/Pause** button on the CD Player control panel.
- ❖ To stop the CD, click the **Stop** button.

## Playing a DVD

This manual has an entire chapter devoted to using WinDVD<sup>TM</sup>. For information about how to play back a DVD, see “[WinDVD<sup>TM</sup>](#)” on page 174.

When you watch DVD movies on your computer using WinDVD, Toshiba highly recommends that your system’s power management utility is set to full power mode.

## **Viewing the contents of a CD or DVD**

CDs and DVDs contain files just like diskettes and the hard disk. CDs are often used to install software or store files that require a lot of space, such as photographs and large presentation files. You can use Explorer or My Computer to view the contents of any CD or DVD.

## **Caring for CDs and DVDs**

- ❖ Store your discs in their original containers to protect them from scratches and keep them clean.
- ❖ Never bend a disc or place heavy objects on top of it.
- ❖ Hold a disc by its outside edge. Fingerprints on the surface of a compact disc can prevent the drive from reading the data properly.
- ❖ Avoid exposing discs to direct sunlight or extreme heat or cold.
- ❖ To clean a disc, wipe it from the center outwards (not in a circle) with a clean, dry cloth. If necessary, moisten the cloth with water or a neutral cleaner (not benzine or rubbing alcohol). Let the disc dry completely before inserting it in the drive.

## **Setting up for communications**

To communicate across the telephone lines with another computer, you need:

- ❖ The computer's modem
- ❖ A telephone line
- ❖ A communications program

To connect to the Internet, you need a Web browser, such as Microsoft® Internet Explorer.

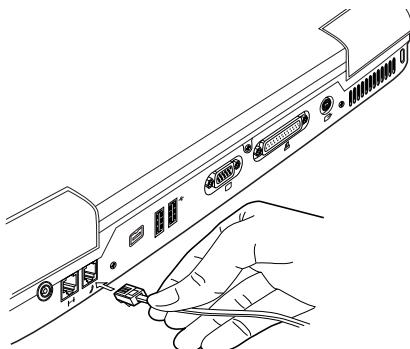

## Connecting the modem

Your computer comes with a built-in modem and a built-in 10/100 Ethernet LAN adapter. To use the modem, you must connect it to a standard RJ11 telephone line. For more information on your modem, go to [toshiba.com](http://toshiba.com).

*NOTE: Due to FCC limitations, speeds of 53 kbps are the maximum permissible rates during downloads. Actual data transmission speeds will vary depending on line conditions.*

- 1 Attach one end of a standard RJ11 telephone cable to the modem port on the back of the computer.

*Connecting the internal modem*

- 2 Plug the other end of the RJ11 telephone cable into the modular jack of a standard telephone line.

## Connecting your computer to a network

You can connect your computer to a network locally or remotely.

- ❖ Locally, using the built-in 10/100 Ethernet LAN adapter by connecting it to a standard RJ45 LAN line.

---

- ❖ Remotely, using the built-in modem and a dial-up connection.

To set up the network connection, use the Network Setup Wizard:

- 1 Click **Start** and point to **All Programs**.
- 2 Point to **Accessories**, then to **Communications**, and click **Network Setup Wizard**.
- 3 Follow the on-screen instructions.

The computer connects with the network.

## **Using the iLINK® port**

The iLINK® port on the back of the computer provides an extremely fast data transfer rate (up to 400 mega bits per second [Mbps]). You can connect up to 63 external devices to the iLINK® port.

In addition to high speed, the iLINK® port also supports isochronous data—the delivery of data at a guaranteed rate. This makes it ideal for devices that transfer high levels of data in real-time, such as video devices.

As with USB ports, the iLINK® port supports both Plug-and-Play (automatic configuration) and hot swapping (the ability to connect and disconnect devices while the computer is on.). The main difference between iLINK® and USB technology is that iLINK® supports faster data transfer rates.

## Powering down the computer

When you power down the computer, you have three options to choose from: Turn Off (or Shut down), Hibernate and Standby. Each option has its advantages.

*TECHNICAL NOTE: Before using any of these options to power down your computer, save your files and make sure the drive-in-use lights are off.*

*If you decide to continue working, wait a few seconds before turning the computer on again.*

### Turn Off or Shut down command

The Turn Off or Shut down command shuts the computer down completely.

- ❖ Use the Turn Off command if you are using the Windows® XP Home version operating system, or the Windows® XP Professional operating system when not connected to a domain server.
- ❖ Use the Shut down command if you are using the Windows® XP Professional operating system and connected to a domain server.

When you start up again, the computer runs a self-test and loads the operating system. You must open any programs and files you want to use.

Factors when choosing Turn Off or Shut down:

- ❖ No power is used while the computer is shut down. This is the most efficient mode if you will be away from your computer for an extended time.
- ❖ Restarting from Turn Off or Shut down uses the most time and battery power.

- ❖ When starting up again, the system does not automatically open programs and files you were previously using.

## Hibernation command

Hibernation mode shuts the computer down completely, but it first saves the current state of the computer to the hard disk. Since Hibernation mode does not require power to maintain the saved information, the system settings are retained indefinitely. Restoring information from the hard drive takes longer than restoring it from memory. When you start up again, the computer runs a self-test, loads the operating system, and then returns to the state in which you left it.

Factors to consider when choosing Hibernation mode:

- ❖ While in Hibernation mode, the computer uses no battery power.
- ❖ Because the state of the system is held on the hard disk, no data is lost if the battery discharges.
- ❖ Restarting from Hibernation mode uses less time and battery power than restarting from Turn Off.
- ❖ Restarting from Hibernation mode uses a little more time and battery power than restarting from Standby because information is being retrieved from the hard disk instead of memory.
- ❖ When starting up again, the computer returns to the state in which you left it, including all open programs and files you were using.

## Standby command

The Standby command puts the computer into a power-saving mode. Standby holds the current state of the computer in memory so that, when you restart the computer, you can continue working from where you left off.

Factors to consider when choosing Standby:

- ❖ While in Standby mode, the computer uses some battery power. A fully charged battery will last up to eight hours in Standby mode.

*NOTE: If you power down using the Standby command and the battery discharges fully, your information will be lost. Be sure to save your work often.*

- ❖ Restarting from Standby mode uses less time and battery power than restarting from Turn Off or Hibernation mode.
- ❖ When starting up again, the computer returns to the state in which you left it, including all open programs and files you were using.

*TECHNICAL NOTES: Before using any of these options to power down your computer, save your files and make sure the drive-in-use lights are off.*

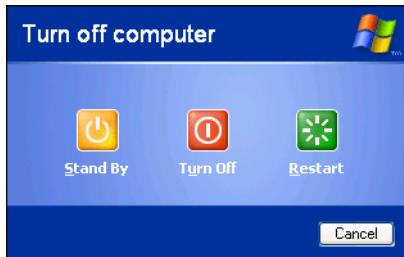

*If you change your mind and decide to continue working, wait a few seconds before turning the computer on again.*

## Using Turn Off or Shut down

For the Windows® XP Home operating system, follow these steps to shut down the computer:

- 1 Click **Start**, select **Turn off computer**.

The Turn off computer dialog box appears.

*Sample Turn off computer dialog box*

- 2 Click **Turn Off**.

The computer shuts down completely.

For the Windows® XP Professional operating system, follow these steps to shut down the computer:

- 1 Click the **Start** button, then **Shut down**.

The Shut Down Windows dialog box appears.

- 2 Select **Shut down** from the drop-down list.
- 3 Click **OK**.

The computer shuts down completely.

## Shutting down more quickly

You can also shut down the computer by pressing the power button or closing the display panel.

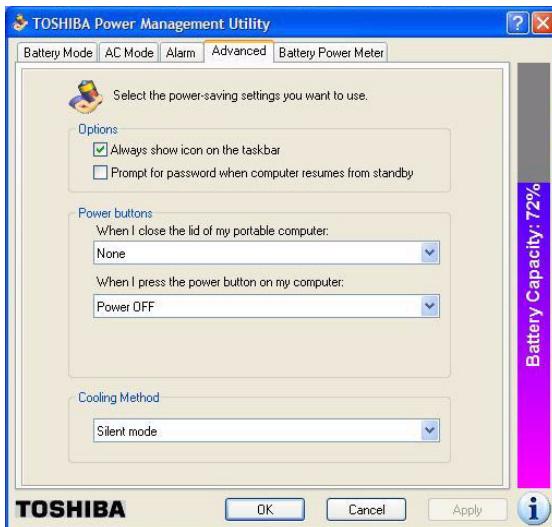

To use either of these methods, you first need to turn on the feature in Toshiba's Power Saver utility.

- 1 Click **Start**, then click **Control Panel**.

The Control Panel appears.

- 2 Click the **Performance and Maintenance** icon.
- 3 Click the **Toshiba Power Management** icon.
- 4 Select the **Advanced** tab.

The following screen appears.

#### *Sample System power mode settings*

- 5 Select **Power Off** for the options you want.
  - ❖ **When I press the power button**  
Set this option to Shutdown to have the computer shut down when you press the power button.
  - ❖ **When I close the lid**  
Set this option to Shutdown to have the computer shut down when you close the display panel.
- 6 Click **OK**.

---

7 Close the Control Panel.

---

*NOTE: For more information about the Power Saver utility, see "Power Management" on page 172.*

---

## Starting again after Turn Off or Shut Down

To start the computer up again, press and hold the power button until the on/off light changes to green.

## Using Hibernation

Hibernation mode shuts the computer down completely, but it first saves the current mode of the computer to the hard disk. Since Hibernation mode does not require power to maintain the saved information, the system settings are retained indefinitely. Restoring information from the hard disk takes longer than restoring it from memory. When you start up again, the computer runs a self-test, loads the operating system, and then returns to the mode in which you left it.

Factors to consider when choosing Hibernation:

- ❖ While in Hibernation mode, the computer uses no battery power
- ❖ Because the mode of the system is held on the hard disk, no data is lost if the main battery discharges
- ❖ When starting up again, Hibernation uses less time and battery power than does Turn Off Computer
- ❖ Restarting from Hibernation uses a little more time and battery power to start up than restarting from Standby, because information is being retrieved from the hard disk rather than from memory
- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using

## Configuring your computer for Hibernation:

-  1 Open the **Start** menu, then click **Control Panel**.
- 2 Click the **Performance and Maintenance** icon, and then click the **Toshiba Power Management** icon.
- 3 Click the **Advanced** tab.
- 4 Select **Hibernation** for the options you want.

### When I press the power button

Set this option to Hibernation so that the computer will go into Hibernation mode when you press the power button.

### When I close the lid

Set this option to Hibernation so that the computer will go into Hibernation mode when you close the display panel.

- 5 Click **OK**.
- 6 Close the Control Panel.

The computer is now set to automatically go into Hibernation when your option settings occur.

---

*NOTE: For more information about the Power Saver utility, see “Power Management” on page 172.*

---

Once the computer is configured, put the computer into Hibernation mode by either pressing the power button or closing the display panel, depending on the hibernation options taken.

## Starting again from Hibernation mode

To start up the computer from Hibernation mode, press the power button until the on/off light turns green. The computer returns to the screen you were using.

## Using Standby

The Standby command puts the computer into a power-saving mode. Standby holds the current mode of the computer in memory so that, when you restart the computer, you can continue working from where you left off.

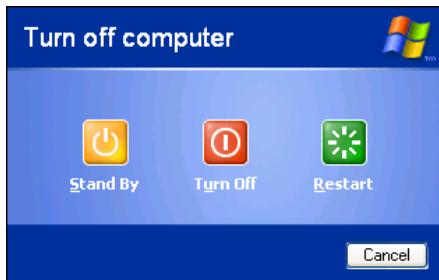

Factors to consider when choosing Standby:

- ❖ While in Standby mode, the computer uses some battery power. A fully charged main battery will last up to eight hours in Standby mode.
- ❖ Restarting from Standby uses less time and battery power than restarting from Turn Off Computer or Hibernation.
- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using.

*NOTE: If you power down using the Standby command and the main battery discharges fully, your information will be lost. Be sure to save your work first.*

To power down the computer using the Standby command, click **Start**, **Turn Off Computer**, and select **Stand By**.

*Sample Turn off computer dialog box*

*NOTE: If you hold down the shift key, Stand By becomes Hibernate in the Turn Off Computer dialog box. To enter hibernation mode, you must hold down the shift key while you select Hibernate.*

---

The computer saves the status of all open programs and files to memory, turns off the display, and goes into a low-power mode. The on/off light blinks amber indicating the machine is in Standby mode.

## Going into Standby mode more quickly

In addition, you can put the computer into Standby mode by either pressing the power button or closing the display panel. You can also specify an amount of time after which the computer automatically goes into Standby mode.

To use any of these methods, you first need to enable them in Toshiba's Power Saver utility.

- 1** Open the **Start** menu, then click **Control Panel**.
- 2** Click the **Performance and Maintenance** icon, and then click the **Toshiba Power Management** icon.
- 3** Click the **Advanced** tab.
- 4** Select **Standby** for the options you want.

### When I press the power button

Set this option to Standby to put the computer into Standby mode when you press the power button.

### When I close the lid

Set this option to Standby to put the computer into Standby mode when you close the display panel.

- 5** Click **OK**.

---

6 Close the Control Panel.

---

*NOTE: For more information about the Power Saver utility, see “Power Management” on page 172.*

---

## Starting again from Standby mode

To start up the computer from Standby mode, press the power button until the on/off light changes to green. The computer returns to the screen you were using.

---

*NOTE: If you power down using the Standby command and the battery discharges fully, your information will be lost. Be sure to save your work often.*

---

## Toshiba's online resources

Toshiba maintains a number of online sites to which you can connect. These sites provide information about Toshiba products, give help with technical questions, and keep you up to date with future upgrades. For more information, see “Contacting Toshiba” on page 218.

# Chapter 4

## Mobile Computing

---

This chapter covers all aspects of using your computer while traveling.

### Toshiba's energy-saver design

Your computer enters a low-power standby mode when it is not being used, thereby conserving energy and saving money in the process. It has a number of other features that enhance its energy efficiency.

Many of these energy-saving features have been set by Toshiba. We recommend you leave these features active, allowing your computer to operate at its maximum energy efficiency, so that you can use it for longer periods while traveling.

### Running the computer on battery power

The computer contains a removable Lithium Ion (Li-Ion) high-capacity battery that provides power when you are away from an AC outlet. You can recharge it many times.

## Battery Notice

To ensure that the battery maintains its maximum capacity, operate the computer on battery power at least once a month until the battery is fully discharged. Please see “[Maximizing battery life](#)” on page 112 for procedures. If the computer is continuously operated on AC power, either through an AC adapter or a docking station (if applicable to your system), for an extended period (more than a month) the battery may fail to retain a charge. This may shorten the life of the battery, and the battery light may not indicate a low-battery condition.

In addition, the computer has an internal real-time clock (RTC) battery. This is a nickel metal hydride (NiMH) battery. The RTC battery powers the RTC memory, which stores your system configuration settings and the current time and date for up to a month while the computer is turned off.

## Using additional batteries

If you spend a lot of time traveling and need to work for many hours without an AC power source, you may want to carry additional charged batteries with you. You can then replace a discharged battery and continue working.

*NOTE: For optimum DVD performance, Toshiba recommends that you play DVDs while running on AC power rather than on battery power.*

## Charging batteries

The main battery needs to be charged before you can use it to power the computer. You can charge the battery using your computer, or you can use an optional battery charger.

---

*CAUTION: Never leave batteries in the battery charger for more than a week at a time. Doing so may reduce the potential charge of the battery.*

*Use only battery chargers designed to work with your notebook computer. You can order a Toshiba battery charger from Toshiba's Web site at [toshiba.com](http://toshiba.com).*

---

## Charging the main battery

To charge the main battery while it is in your computer, plug the computer into a live wall outlet. It takes several hours to charge the battery with the computer off. It takes much longer to charge the battery while the computer is on.

---

*TECHNICAL NOTE: The battery may take longer to charge with many applications open at the same time.*

---

The battery may not start charging immediately if:

- ❖ The battery is extremely hot or cold.

To ensure that the battery charges to its full capacity, wait until it reaches room temperature (50 to 80 degrees Fahrenheit, 10 to 26 degrees Celsius).

- ❖ The battery is almost completely discharged.

Leave the power connected, and the battery should begin charging after a few minutes.

## Charging the RTC battery

The computer contains an internal battery that provides power for the real-time clock (RTC) and calendar.

During normal use, the main battery keeps the RTC battery adequately charged. Occasionally, the RTC battery may lose its charge completely, especially if you have had the computer turned off for a long time.

If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date, or stop working.

To recharge the RTC battery, plug in the computer and leave it turned on for 10 or more hours.

*NOTE: It is seldom necessary to charge the RTC battery because it charges while the computer is off. If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date or stop working.*

*When Hibernation mode is enabled and the RTC battery is completely discharged, a warning prompts you to reset the real-time clock.*

The computer can be used while the RTC battery is being charged, although the charging status of the RTC battery cannot be monitored.

## Monitoring battery power

The battery light indicates the main battery's current charge. It:

- ❖ Glows amber while the battery is being charged.
- ❖ Glows green when the battery is fully charged.
- ❖ Is not lit when the computer is not connected to an external power source.

## Determining remaining battery power

*NOTE: Wait at least 16 seconds after turning on the computer before trying to monitor the remaining battery power. The computer needs this time to check the battery's remaining capacity and perform its calculations.*

- 1 Click **Start**, then click **Control Panel**.

The Control Panel appears.

- 2 Click the **Performance and Maintenance** icon.

- 3 Click the **Toshiba Power Management** icon.

- 4 Click the **Battery Power Meter** tab. The current power source and battery power remaining section displays the current charge state of the battery. The value displays as a percentage of remaining battery charge.

*TECHNICAL NOTE: The computer drains the battery faster at low temperatures. Check your remaining charge frequently if you are working in temperatures below 50 degrees Fahrenheit.*

*The computer calculates the remaining battery charge based on your current rate of power use and other factors such as the age of the battery.*

## Conserving battery power

How long a fully charged battery lasts when you are using the computer depends on a number of factors, such as:

- ❖ How the computer is configured
- ❖ How much you use the display panel instead of an external monitor
- ❖ How much you use the hard disk and other drives

- ❖ Whether you use any optional devices to which the battery supplies power, such as a PC Card
- ❖ Where you are working—since operating time decreases at low temperatures

Toshiba's power-saving options greatly increase the length of time you can use the computer before it becomes necessary to recharge the battery.

Toshiba has combined these options into preset power usage modes.

You may also set individual power-saving options to suit your own needs. See “[Power Management](#)” on page 172 for details.

## What to do when the battery runs low

When the battery runs low you can:

- ❖ Plug the computer into an external power source and recharge the battery.
- ❖ Put the computer in Hibernation mode and replace the battery with a charged spare.
- ❖ Save your work and turn off the computer.

If you don't manage to do any of these things before the battery completely runs out of power, the computer automatically enters Hibernation mode and turns itself off. Hibernation mode keeps track of where you were so, when you turn on the power again, you can continue where you left off.

The computer stores the information on what you were doing until the battery runs out of power. If you have Hibernation mode enabled (the default), the computer copies the details of your open programs and files to the hard disk before shutting down.

## Setting battery alarms

Your computer can be configured to warn you when the battery is running low.

You can set multiple alarms. Each alarm can be set to alert you when a specified percentage of remaining battery power has been reached. You can set how the warning occurs: sound an alarm, display a message, both, or none. You can also set the computer to enter Stand By mode or Hibernation mode, or to Turn Off when the alarm goes off.

To set an alarm:

- 1 Click **Start**, then click **Control Panel**.  
The Control Panel appears.
- 2 Click the **Performance and Maintenance** icon.
- 3 Click the **Toshiba Power Management** icon.
- 4 Click the **Alarm** tab and set the alarm, as desired.

## Changing the main battery

When your battery power is running low, you have two options: connect the computer to an AC power source or install a charged battery.

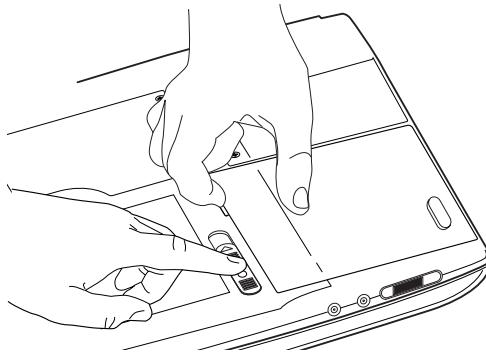

*NOTE: If your battery discharges fully, your information will be lost. Be sure to save your work often.*

*CAUTION: When handling a battery, be careful not to drop it or short-circuit its terminals.*

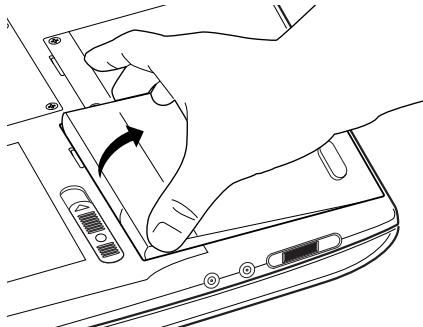

## Removing the battery from the computer

- 1 Save your work.
- 2 Turn off the computer or place it in Hibernation mode according to the instructions in “[Using Hibernation](#)” on [page 97](#).
- 3 Remove all cables connected to the computer.
- 4 Close the display panel and turn the computer upside down with the front of the computer facing you.

*Sliding the battery release latch*

- 5 Carefully slide the battery release latch toward the center of the computer.

*Sliding the battery out*

---

6 While holding the battery release latch toward the unlocked position, use the adjacent half-oval finger slot nearby to gently pull the battery pack free.

---

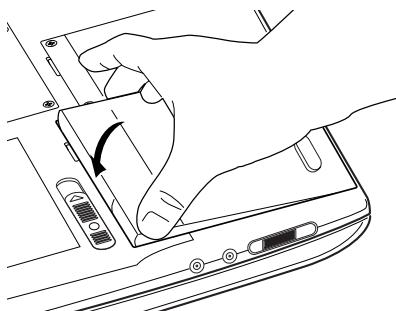

*WARNING: If the battery is leaking or its case is cracked, put on protective gloves to handle it, and discard it immediately following the advice in “[Disposing of used batteries safely](#)” on page 113.*

---

## Inserting a charged battery

- 1 Wipe the battery terminals of the charged battery with a clean cloth to ensure a good connection.
- 2 With the battery release latch pulled toward the unlocked position, insert the battery from the back end first at a slight angle so that end fits evenly with the surrounding casing. If the back end has been correctly inserted, you will be able to gently press the front end into place until it snaps shut. If the front end resists, don't force it. Simply start over.

*Inserting the battery*

*CAUTION: Failure to lock the battery cover can result in the battery falling out of the computer case.*

---

- 3 Turn the computer right side up.
- 4 Reconnect any cables you removed.
- 5 Turn on the computer.

## Safety precautions

- ❖ If the battery pack produces an odor, overheats or changes color or shape while it is being used or charged, turn off the computer's power immediately and disconnect the power cord from the power socket. Carefully remove the battery pack from the computer.
- ❖ Do not try to disassemble a battery pack.
- ❖ Do not overcharge or reverse charge a battery. Overcharging will shorten its life, and reverse charging could damage it.
- ❖ Avoid touching the metal terminals of the battery with another metal object. Short-circuiting the battery can cause it to overheat and may cause damage to the battery or the computer.
- ❖ Do not incinerate a spent battery, as this could cause it to explode and release toxic materials.
- ❖ If a battery is leaking or damaged, replace it immediately. Use protective gloves when handling a damaged battery.
- ❖ To replace the main battery, use an identical battery that you can purchase through [toshiba.com](http://toshiba.com)
- ❖ Reverse Polarity should be avoided with all batteries. The main battery is designed so that it cannot be installed in reverse polarity.
- ❖ Charge the battery pack only in the computer or in a battery charger designated as an approved option.
- ❖ When you install the battery pack, you should hear a click when it is seated properly.
- ❖ Do not expose the battery pack to fire. The battery pack could explode.

## Maximizing battery life

To maximize the life of your battery pack:

- ❖ At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps below:
  - 1 Turn off the computer's power.
  - 2 Disconnect the AC adapter and turn on the computer's power. If it does not turn on, go to step 4.
  - 3 Operate the computer on battery power for five minutes. If the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged. If the battery light LED flashes or there is some other warning to indicate a low battery, go to step 4.
  - 4 Connect the AC adapter to the computer and the power cord to a power outlet. The DC IN or AC power-light LED should glow green, and the Battery LED should glow amber to indicate that the battery pack is being charged. If the DC IN or AC power-light indicator does not glow, power is not being supplied. Check the connections for the AC adapter and power cord.
  - 5 Charge the battery pack until the Battery LED glows green.
- ❖ If you have extra battery packs, rotate their use.
- ❖ If you will not be using the system for an extended period, more than one month, remove the battery pack.
- ❖ Disconnect the AC adapter when the battery is fully charged. Overcharging makes the battery hot and shortens life.
- ❖ If you are not going to use the computer for more than eight hours, disconnect the AC adapter.

---

- ❖ Store spare battery packs in a cool dry place out of direct sunlight.

## Disposing of used batteries safely

You can recharge a battery many times. When the battery needs replacing, the battery light flashes amber shortly after you have fully recharged the battery.

You must discard a battery if it becomes damaged.

*CAUTION: The computer's main battery is a Lithium Ion (Li-ion) battery, which can explode if not properly replaced, used, handled, or disposed of. Putting spent batteries in the trash is not only irresponsible, it may be illegal. Dispose of the battery as required by local ordinances or regulations.*

*Use only batteries recommended by Toshiba.*

---

The materials that came with your computer may include an insert regarding the disposal of batteries. If not, check with your local government agency for information on where to recycle or dispose of old batteries.

## Traveling tips

The environmental precautions listed in “[Selecting a place to work](#)” on page 41, also apply while travelling.

- ❖ Never leave your computer on a sunny ledge or in a place where it could get wet or covered in dust.
- ❖ Always travel with the computer in a carrying case. Toshiba offers a choice of carrying cases for the computer. They all provide plenty of extra space for manuals, power cables, compact discs and diskettes.

---

Contact your authorized Toshiba representative for more information, or visit [toshiba.com](http://toshiba.com).

---

*TECHNICAL NOTE: When traveling by air, you may be required to pass your notebook through airport security equipment. The X-ray equipment will not harm your computer.*

---

# Chapter 5

## Getting to Know the Windows® XP Operating System

---

This chapter introduces the Windows® XP operating system by guiding you through a few basic tasks.

Whether you have used a Windows® operating system or not, the skill and confidence you will gain from this chapter will more than offset the short amount of time spent going through these lessons.

As you explore the Windows® XP operating system further, you will often discover alternative ways of accomplishing a particular task.

For more detailed information on your operating system, refer to the Microsoft® Windows® XP operating system documentation that came with your computer.

---

*HINT: The illustrated examples in this guide may appear slightly different from the screens displayed by your system. However, the differences are not significant and do not indicate any change in the functionality of your system.*

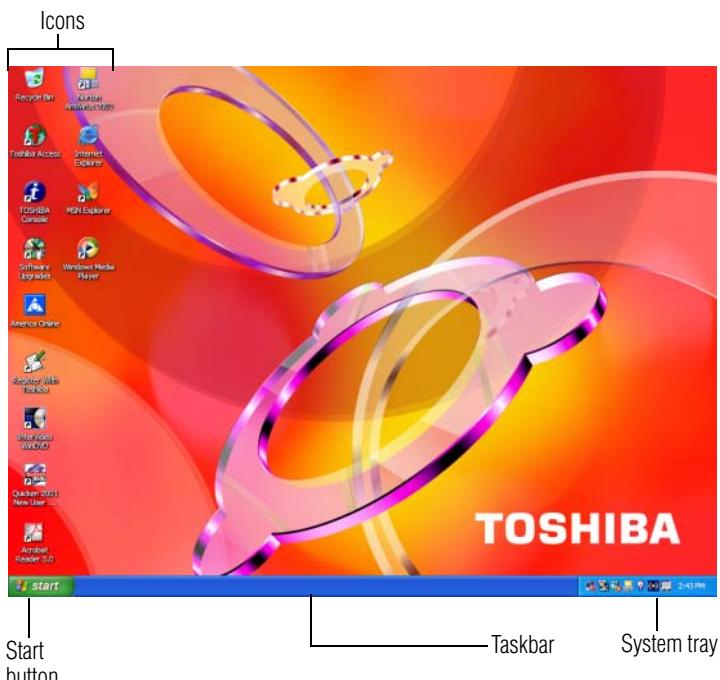

---

## Lesson 1: Exploring the desktop

The desktop is the launching pad for everything you can do in the operating system. You use its features to start programs, find documents, set up system components, and perform most other computing tasks.

### Finding your way around the desktop

Your computer's desktop includes several standard features: icons, Start button, taskbar, system tray, and background pattern.

*Sample Desktop*

## Icons

An icon represents a folder, file, or program that can be quickly activated by double-clicking the icon.

You can create a new desktop icon for any folder, file, or program by dragging the element's icon from its location in a window to the desktop area.

The icons initially displayed on your system desktop include:

Recycle Bin — Holds files you've deleted. You may be able to retrieve these files until you empty the Recycle Bin.

*TECHNICAL NOTE: If you delete a file from a diskette, it does not go into the Recycle Bin. For more information on the Recycle Bin, see Windows® online Help.*

Internet Explorer — The Microsoft® browser allows you to view web pages when connected to the Internet.

*NOTE: If you place the cursor over an icon, a popup description of the file contents appears.*

Your desktop may contain other icons depending on your configuration. See Windows® XP online Help for more specific information on each icon and how to use it.

## Start button

You use the Start button to:

- ❖ Start programs
- ❖ Access operating system update information
- ❖ Open recently accessed documents
- ❖ Adjust system settings

- ❖ Search for files
- ❖ Access Windows® Help and Support
- ❖ Run programs
- ❖ Suspend system activity and turn off the computer

For more information on starting programs, see “[Lesson 6: Starting programs](#)” on page 126.

## Taskbar

Each time you open a program, a button associated with that program appears on the taskbar. With some programs, a button appears on the taskbar for each document or window you open. You can use these buttons to quickly switch between the programs or windows.

To make a program or window the active one, click the program’s or window’s button.

## System tray

The System tray displays icons of tasks or programs that run continuously in the background. To learn more about each task, position the cursor over the icon for a few moments and a short description of the task appears.

Typical tasks in the System tray are Current time, Power usage mode, and speaker volume.

To activate a specific task, double-click the appropriate System tray icon.

## Windows® XP file system

All files on your computer are organized for accessibility using a hierachal file system.

Programs, documents, and other data are held in *files*. These files can be grouped together in *folders*, and folders can be grouped inside other folders for convenient organizing. All

---

the files and folders reside in your computer on a storage device, such as a disk drive.

You can think of your computer storage system in terms of office equipment. You have a file cabinet (device), that contains folders, and each folder may contain documents. Your office may have more than one file cabinet, just as your computer may have more than one disk drive.

Computers can be connected together to form a *network*, so that programs, documents and other data can be quickly and easily shared between computers.

You can use the My Computer feature accessible through the Start menu to access any file in the Windows® file system.

For more information, read the Microsoft® documentation that comes with your computer.

## Lesson 2: Using the TouchPad and control buttons together

The “Getting Started” chapter introduced you to TouchPad, which is your basic tool for moving around the screen. This lesson lets you practice using the TouchPad and control buttons in tandem.

- 1 Using the TouchPad, move the pointer to the **Start** button on the screen, then click the primary button (usually the left) of the adjoining control buttons to open the Start menu.

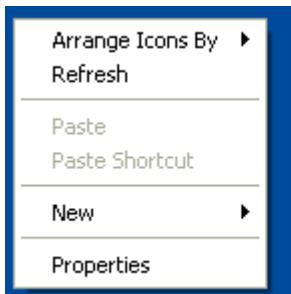

*NOTE: In this guide, the term “click” refers to the primary button, which is usually the left one. Instructions requiring the secondary button specifically mention that button. For example, “click the secondary button.”*

---

- 2 Click an empty area of the desktop to close the **Start** menu.

3 With the pointer in an empty area of the desktop, click the secondary button to open the desktop shortcut menu.

As the name implies, shortcut menus provide quick access to many operating system features.

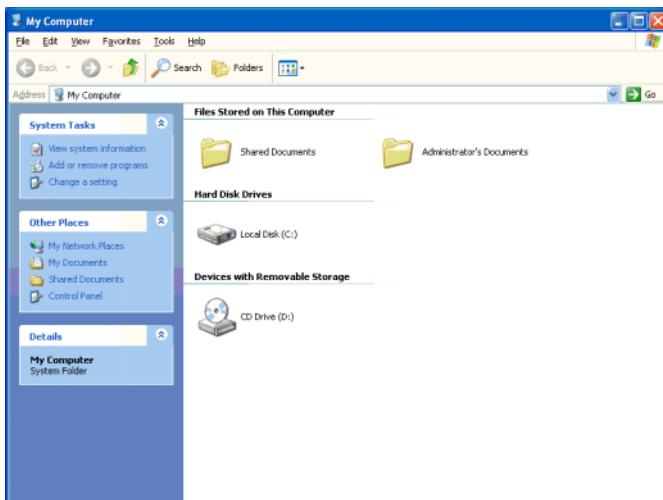

*Sample desktop shortcut menu*

4 Click an empty area to close the shortcut menu.

5 Click **Start**, then click **My Computer**.

The operating system opens the My Computer window.

*Sample My Computer window open*

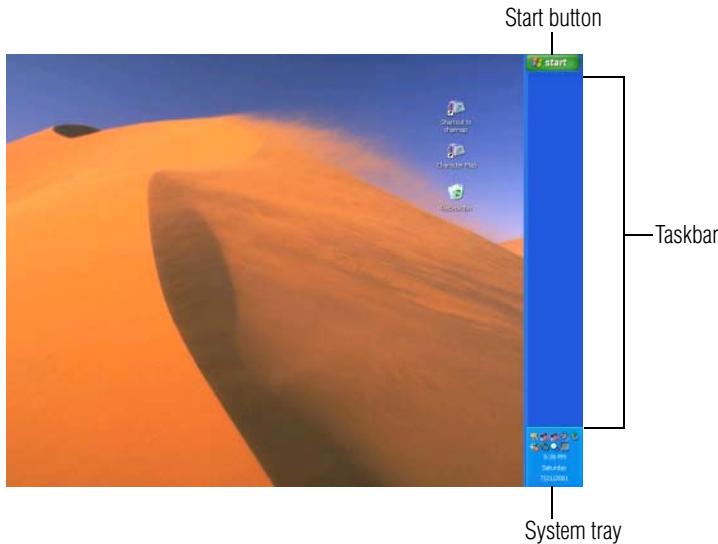

6 Now click the **Close** button in the upper-right corner of this window.

The My Computer window is closed.

7 Click an empty area of the taskbar at the bottom of the screen and, while holding down the primary button, use the pointing device to drag the pointer to the right edge of the desktop, then release the primary button. (This process is known as “clicking and dragging.”)

The taskbar moves from the bottom to the right edge of the desktop.

*Sample desktop with the taskbar on the right*

*HINT: You can move the taskbar to any of the desktop's four edges.*

8 Click the taskbar once again and drag it back to the bottom of the desktop.

If you can't move the taskbar, it's probably because it has been locked.

To unlock it:

- 1 Right-click the taskbar.

A menu appears. If the Lock the taskbar option has a check mark, then the feature is in use.

- 2 Click **Lock the taskbar**.

- 3 Call up the menu again. The check mark should be gone, indicating the lock has been removed.

Follow the same steps to lock the taskbar.

You can also lock and unlock the taskbar by using the Taskbar and Start Menu Properties window.

To access the window:

- 1 Right-click the taskbar, then select **Properties**.

The Taskbar and Start Menu Properties window appears.

- 2 Check or uncheck the box next to the Lock the taskbar command.

- 3 Click **OK**.

## Lesson 3: Learning about the Internet

This lesson demonstrates how to access a Web page from a window and from the taskbar.

The lesson assumes you have an account with an Internet Service Provider (ISP).

### Opening a Web page from a window

The most common way to open a Web page is by typing a Web address (also known as the URL) in the address line of

the Web browser itself. But you can also type a Web address in the My Computer window.

**DEFINITION:** URL stands for Uniform Resource Locator, which is the address that defines the route to a file on the Web or any other Internet facility. Generically, it is known as the World Wide Web site address.

- 1 Click **Start**, then **My Computer**.

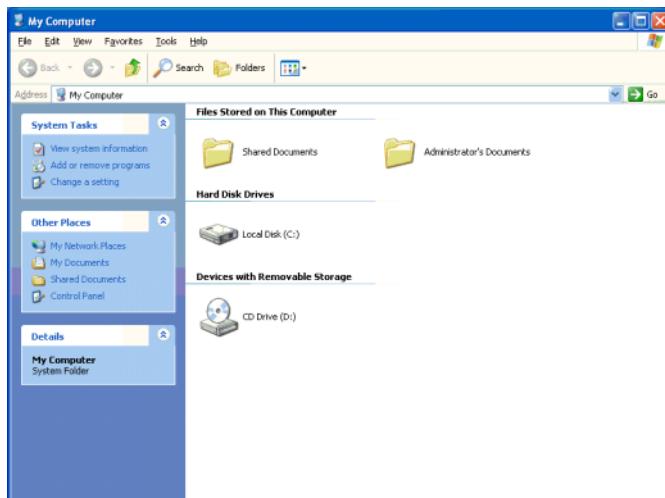

The My Computer window appears.

- 2 On the **View** menu, point to **Toolbars**, then click **Address Bar**.

The operating system displays the address bar. It indicates that you are in “My Computer.”

- 3 Type the Web address for the page you wish to open and press **Enter**.

For more information on the Internet, refer to “[An overview of using the Internet](#)” on page 157.

*Sample My Computer window*

---

## Lesson 4: Creating a new document

This lesson teaches you how to create a text file without having to first open a program.

- 1 Move the pointer to an empty area of the desktop, then click the secondary button.

The operating system displays a shortcut menu of commands applicable to the desktop.

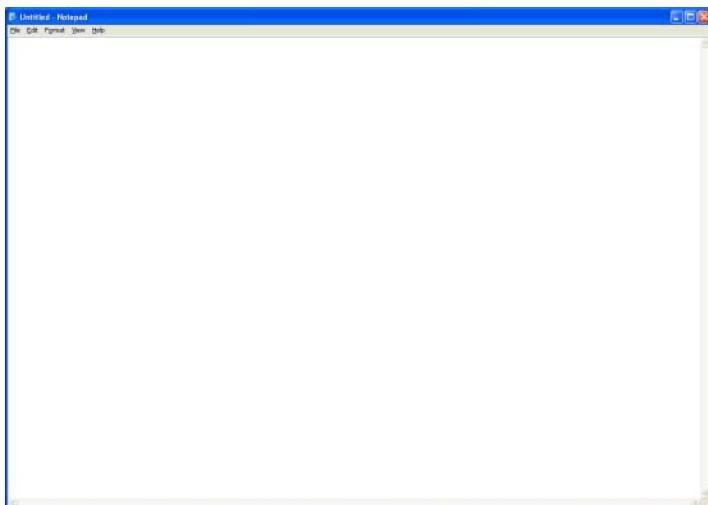

- 2 Click **New**, then click **Text Document**.

The operating system creates an icon on the desktop called New Text Document with the icon name highlighted.

- 3 To give your document a meaningful name, type My New Doc.txt and press Enter.

- 4 Double-click the **My New Doc** icon.

The operating system opens the new document in Notepad—the text editor built into the operating system.

*Sample Notepad window*

Notice that when the document opens, there is a new button on the taskbar that reads New Doc.txt- Notepad (the name may be too long to fit into the taskbar space but, if you point to the name, the complete name is visible). By displaying buttons like this one, the taskbar helps you keep track of the programs and files you currently have open.

To learn more about Notepad, open the Help menu by pressing F1. For now, leave Notepad open and go on to the next lesson.

## Lesson 5: Creating a new folder

---

*DEFINITION: A folder is an area where you can store documents and other types of files. It is analogous to a file folder stored in a file cabinet. In this case, a disk drive in the computer is the file cabinet.*

---

The operating system stores documents and programs in folders. It even stores other folders in folders. In this lesson, you will create a folder in which to store your new document.

- 1 Move the pointer to an empty area of the desktop, then click the secondary button.

The operating system displays the desktop shortcut menu.

- 2 Click **New**, then click **Folder**.

The operating system creates an icon on the desktop called New Folder with the icon name highlighted.

- 3 Type a name for the folder, such as **My Folder**, then press Enter.

- 4 Close the Notepad document you just created by clicking the **Close** button on the right side of the Notepad title bar.

The operating system displays the document as an icon on the desktop.

**5** Click the document icon and drag it toward your New Folder icon. Position the document icon over the New Folder icon until it changes color, then release the primary button.

The outline of the document icon moves across the desktop and disappears into the folder.

**6** To see your document, double-click the folder icon.

A window opens and displays the contents of the folder.

**7** Close the window by clicking its **Close** button and continue with the next lesson to learn how to start programs.

## Lesson 6: Starting programs

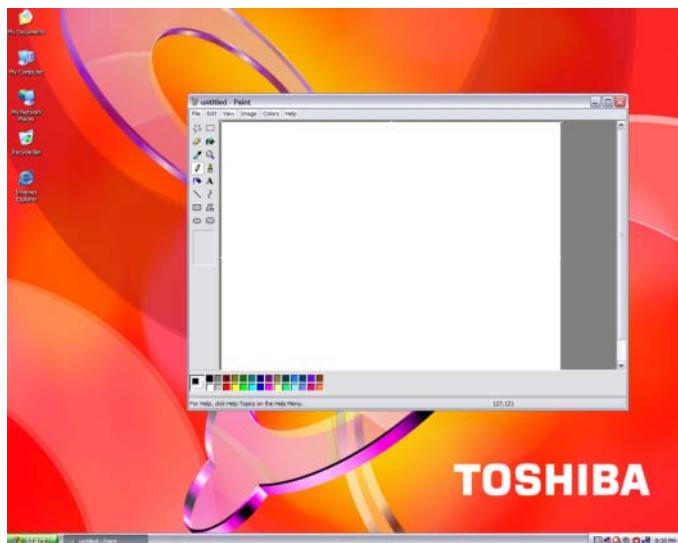

Usually, you will know which program you want to use for a particular task.

This lesson teaches you how to launch programs from the Start menu, using two of the programs that are built into the operating system: Paint and Windows® Explorer.

To launch the Paint program:

- 1** Click **Start**, then point to **All Programs**.
- 2** Click **Accessories**.
- 3** Click **Paint**.

The operating system opens Paint—a basic drawing program.

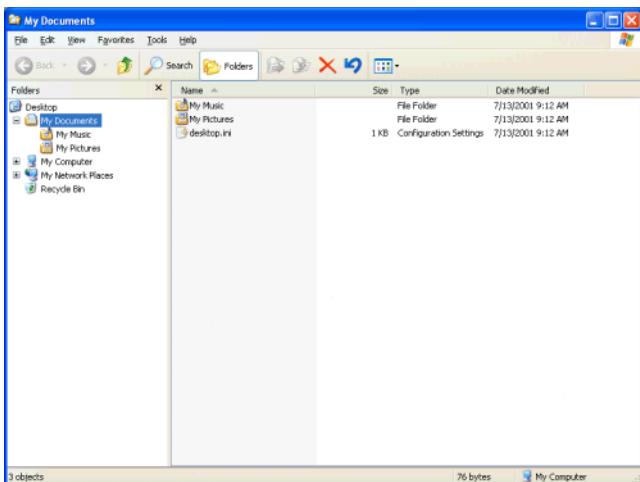

*Sample Paint window*

To launch Windows Explorer:

- 1** Click **Start**, then point to **All Programs**.
- 2** Click **Windows Explorer**.

The operating system opens Windows® Explorer, which provides access to all your computer's resources. For example, it lets you see all the files in a particular folder on the computer's hard disk.

*Sample Windows Explorer window*

Notice the taskbar now has two buttons on it—one for Paint and one for Windows® Explorer.

- 3 To re-display the Paint program, click the **Paint** button on the taskbar.

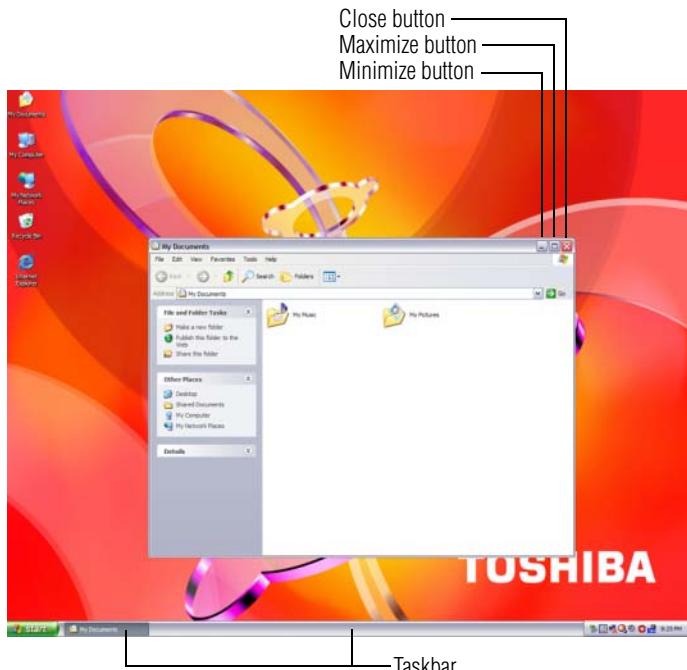

The operating system re-displays the Paint program.

The operating system places the active window on top of other windows on the desktop unless you have selected a different display option. You can move back and forth between the two programs by clicking each button on the taskbar alternately.

## Lesson 7: Resizing, repositioning, and hiding windows

If you have followed the lessons in this chapter, you now have a screen with several program windows open. You can organize these windows by resizing and repositioning windows so that you can see more than one of them at a time. You can also hide windows by removing them from the desktop without actually closing your document or program.

This lesson introduces several ways to adjust the size, shape, and position of windows that are open on the desktop.

Sample Windows® Explorer open on the desktop

## Using the taskbar

If you have application windows open on the desktop, you can rearrange them by right-clicking on the program's button on the taskbar, and clicking the desired option. You have the following options:

- ❖ Move the window
- ❖ Size the window
- ❖ Minimize the window — display only the taskbar button
- ❖ Maximize the window
- ❖ Close the window

Choose your option depending on how you wish to set up your desktop.

## Minimizing and maximizing windows

- 1 To make the Explorer window the active window, click the **Windows Explorer** button on the taskbar.

The operating system highlights the Windows® Explorer title bar to show that Windows® Explorer is the active window.

- 2 Click the **Minimize** button at the top-right of the Explorer window to hide the window.

Windows® Explorer disappears from the desktop. However, it is still open, as you can see from the taskbar.

*HINT: Minimizing program windows is a good way to clean up the desktop without actually closing programs.*

---

- 3 Click the **Maximize** button in the top-right corner of the Paint window.

---

The Paint window expands to fill the screen, hiding everything except the taskbar. Notice that the Maximize button has changed. It is now called the Restore button.

*HINT: Maximizing a program is a good way to work when you are only using that program and do not want any distractions on the screen.*

---

## Resizing and moving windows

- 1 Click the **Restore** button in the top-right corner of the Paint window.

Paint returns to its previous size and location. Notice that the Restore button has changed back into the Maximize button.

For the next few steps assume that you want to be able to see both Paint and Windows® Explorer at the same time.

- 2 Move the pointer to the right-hand edge of the Paint window.

The pointer changes to a two-headed arrow.

- 3 Click and drag the edge of the window until it takes up just less than half the width of the desktop.

- 4 Click the title bar of the Paint window and drag it to the left side of the desktop.

You can move any window by clicking its title bar and dragging it.

- 5 Click **My Documents** on the taskbar.

- 6 Repeat steps 3 and 4 to change the size and position of Windows® Explorer, placing it on the right side of the desktop.

Now that the windows are side by side, you can see how you could refer to one window while working in the other.

Resizing and moving windows allows you to rearrange the desktop to suit your needs. Experiment with different sizes and placements of windows to find the best arrangement for your work.

At this point you have two programs open on the desktop. The next lesson shows you how to close them.

## Lesson 8: Closing programs

Once you are finished working with a document or program, it is a good idea to close it. While you can run several programs at the same time, having a large number of programs and documents open simultaneously can slow down your computer.

This lesson teaches you how to close the programs you opened earlier in this tutorial.

To close the programs:

- 1 Click the **Close** button at the top-right of the Explorer window.

That is all there is to it. Windows® Explorer closes, removing the Explorer button from the taskbar as well.

- 2 Close Paint and the My Computer window (assuming it is still open) by clicking the **Close** buttons for each program.

---

*HINT: Always save your work before you close a program.*

---

## Lesson 9: Creating shortcuts

By adding shortcuts to your desktop, you can open programs or files with the click of a button. You will probably want to create shortcuts for the programs you use most frequently. This lesson explains how to create shortcuts using two operating system accessories, Calculator and Character Map, as examples.

### Creating a shortcut to the Calculator

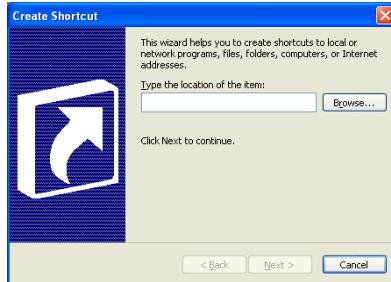

Use this method when you know the name and location of the program file to which you would like to create a shortcut.

- 1 Move the pointer to an empty area of the desktop, then click the secondary button.

The operating system displays the desktop shortcut menu.

- 2 Click **New**, then click **Shortcut**.

The operating system displays the Create Shortcut dialog box.

*Sample Create Shortcut dialog box*

- 3 In the **Command line** box, type c:\windows\system32\calc.exe and click **Next**.

The operating system prompts you to select a name for the shortcut.

4 Type Calculator and click **Finish**.

The operating system displays the new shortcut on your desktop.

## Creating a shortcut to the Character Map

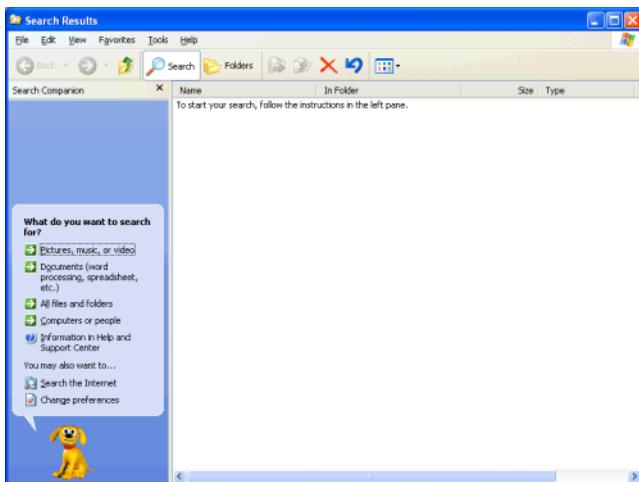

Use this method when you don't know the name and location of the program file.

1 Click **Start**, then click **Search**.

*Sample Search option on the Start menu*

The operating system displays the Search dialog box.

Sample Search Results dialog box

HINT: Search also allows you to perform searches on the Internet.

2 Click All files and folders.

3 Type char in the text box labeled: In all or part of the file name.

4 Click Search.

The operating system displays a list of all the files with "char" in their names.

5 Select the **Character Map** file with the secondary button, then drag and drop it on the desktop.

A shortcut to the Character Map appears on your desktop.

6 In the shortcut menu, click **Create Shortcut(s) Here**.

---

*NOTE: Shortcut icons can be recognized by an arrow in the lower left corner. Deleting or changing the shortcut icons will not affect the program to which they refer.*

---

Clicking a shortcut icon opens the program or folder immediately. You can place as many shortcuts on your desktop as you find useful.

---

*HINT: The Character Map is a useful tool when you want to add a special character to a document.*

---

## Lesson 10: Changing the screen saver

You can personalize the background area of your desktop with pictures, patterns, or colors. The background is considered a “property” of your desktop. This lesson will not only teach you how to change the background, but will also introduce you to properties.

The Windows® XP operating system treats all windows, icons, programs, drives, etc. as self-contained objects, each with its own set of properties (such as size, position on-screen, and color). Many of these properties can be customized to meet your particular needs and tastes.

---

*DEFINITION: An object is an independent block of data, text, or graphics that was created by an individual application.*

---

This lesson introduces object properties by showing you how to change one of the properties of the desktop—the screen saver. This is a continuously changing pattern that appears on the screen during pauses in your work.

- 1 Move the pointer to an empty area of the desktop, then click the secondary button.

The operating system displays the desktop shortcut menu.

- 2 Click **Properties**.

The operating system opens the Display Properties dialog box.

*Sample Display Properties dialog box*

- 3 Click the **Screen Saver** tab.
- 4 Click the arrow beside the current option—probably “(None)”—to open the screen saver list box.
- 5 Scroll through the screen saver options by clicking the scroll arrows in the list box.
- 6 Try a screen saver pattern by clicking a name in the list box.

The operating system displays your selection in the monitor above the list box. Try several patterns.

- 7 To apply a pattern to your desktop, click **Apply**.
- 8 After you have chosen a screen saver pattern and applied it to your desktop, click **OK**.

The operating system returns you to the desktop.

---

You can view any object's properties by clicking the object with the secondary button, then choosing **Properties** from the shortcut menu that appears.

The next lesson explains how to set two other properties—the date and time.

## Lesson 11: Setting the date and time

You initially set the computer's date and time properties when you turned the computer on for the first time and set up the operating system.

To change the date and time settings:

- 1 Click **Start**, then click **Control Panel**.

The Control Panel appears.

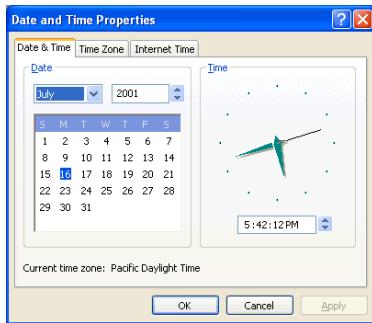

- 2 Click the **Date, Time, Language, and Regional Options** icon.

- 3 Click the **Date and Time** icon.

The operating system displays the Date/Time Properties dialog box.

- 4 Click one of the following:

- ❖ **Change the date and time** in the **Pick a task** section
- ❖ **Date and Time** in the **or pick a Control Panel icon** section

*Sample Date and Time Properties dialog box*

*HINT:* To open the Date and Time Properties dialog box more quickly, either click the time display on the taskbar with the secondary button, then click Adjust Date/Time, or double-click the time display.

---

- 5 Click the **Date and Time** tab and set the correct month, year, day, and time.
- 6 Click the **Time Zone** tab and drop-down list box, and set your time zone.
- 7 Click **OK**.
- 8 Close the Control Panel.

## Lesson 12: Removing objects from the desktop

Earlier in this tutorial, you created a new icon on the desktop. Since everything you have done to this point has been just practice, you may want to return the desktop back to its original uncluttered state. This lesson explains how to remove objects from the desktop and introduces the Recycle Bin.

- 1 Click the **New Folder** icon you created, drag it until it is over the Recycle Bin icon and it changes color, then release the primary button.

The icon disappears, but, with the operating system, it is not really gone. It is merely set aside in the Recycle Bin so that you can restore or delete it later.

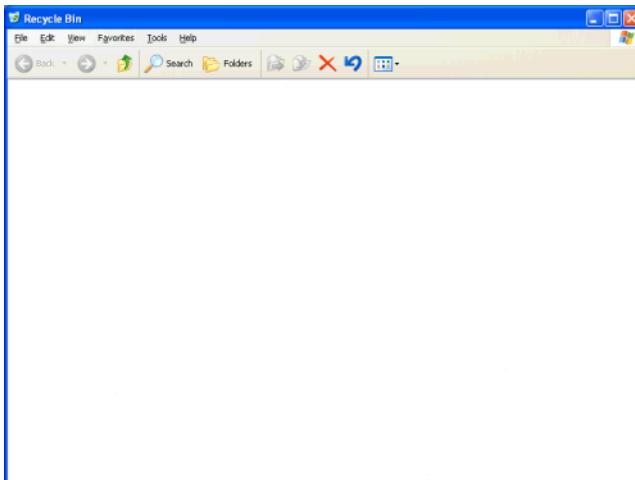

- 2 Repeat step 1 for any other icons you created during this tutorial.

Each icon disappears as you drop it on the Recycle Bin.

- 3 Double-click the **Recycle Bin** icon.

The operating system opens the Recycle Bin window. Notice that all the icons you dropped on the Recycle Bin are listed.

*Sample Recycle Bin window*

- 4 To completely remove an object, select it, and then click **File, Delete**.

The Confirm File Delete window appears.

- 5 Click **Yes** to permanently delete the file.

The object is permanently deleted from the Recycle Bin.

Later on—in your real work, not in this tutorial—you will use the Recycle Bin to delete other objects such as folders, documents, and sometimes even programs. Still, the process is the same. Just drag an object's icon to the Recycle Bin.

If you change your mind and want to restore an object you sent to the Recycle Bin, select the object with the secondary button and click **Restore**. The operating system restores the object to the place from which it was deleted. You can also restore the object by dragging it to the desktop.

But when you are absolutely certain that you never want to see it again, delete it from the Recycle Bin.

To delete everything from the Recycle Bin at once, choose **Empty Recycle Bin** from the File menu.

*HINT: Empty the Recycle Bin periodically. Even though an item is moved to the Recycle Bin, it still uses valuable space on the hard disk drive until it is deleted from the Recycle Bin.*

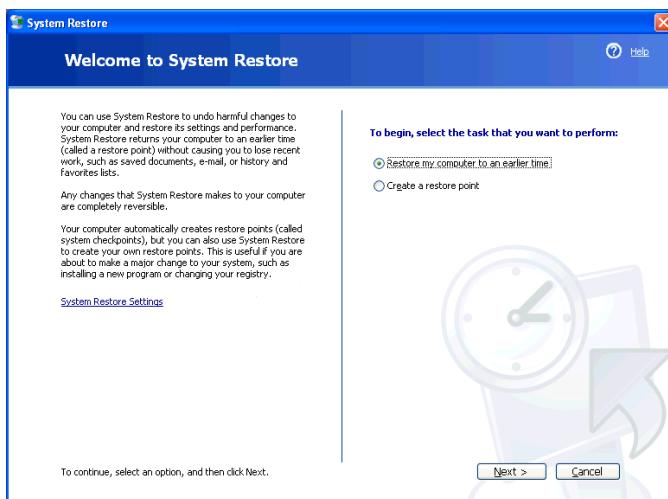

---

## Lesson 13: Using System Restore

The System Restore feature allows you to return your computer to the way it was configured on a specific date or time, a “restore point.” This is useful if you are reconfiguring your computer for new hardware or software. In the event that your hardware or software causes your computer to malfunction, you can remove the offending item(s) and restore the system to the state it was in at the preset time.

To get to System Restore, click **Start**, click **All Programs**, point to **Accessories** and **System Tool**, and click **System Restore**.

The System Restore Welcome screen appears.

*Sample System Restore welcome screen*

The Windows® XP operating system guides you through the process of storing your system settings for future use. It also guides you through restoring your system to the selected date or time.

## Lesson 14: If I am lost, what do I do?

This teaches you how to use some of the Help features in the Windows® XP operating system.

### Windows® XP Help and Support

The operating system has a Help facility. If you cannot figure out how to do something, the answer is probably only a few clicks away.

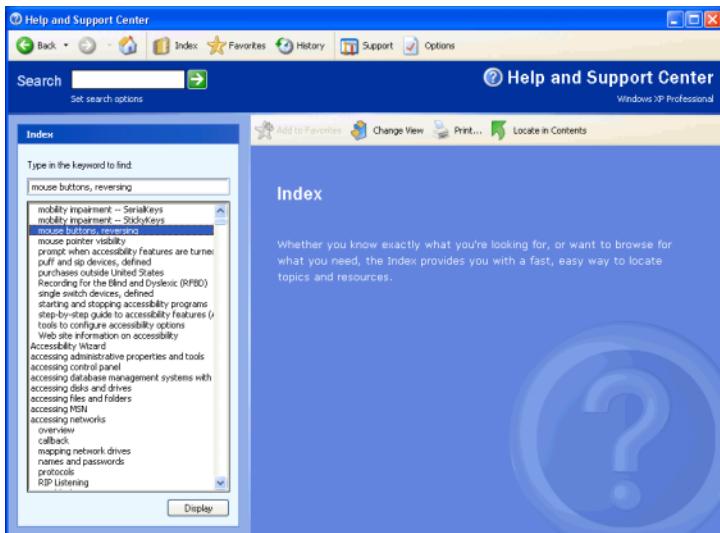

Assume that you want to draw a picture, but don't know how.

- 1 If you don't have an application open, press F1; otherwise click **Start**, then click **Help and Support**.

The operating system opens the Help and Support Center window.

**2** If you do not see the index, click **index**.

Help and Support displays the Index.

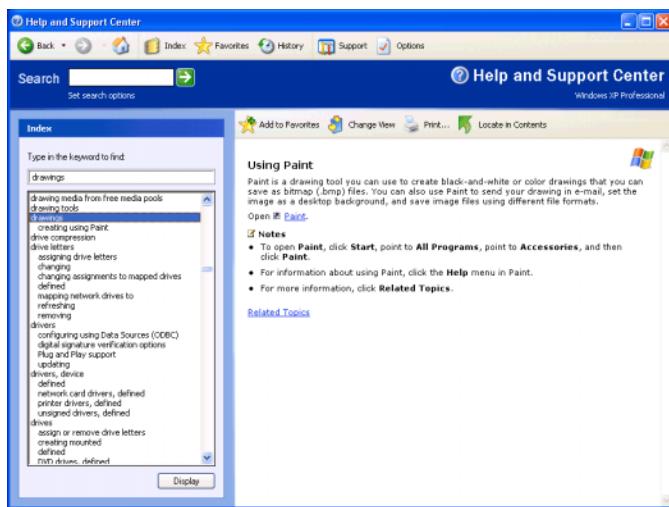

*Sample Help and Support Index*

The left side of the screen contains the index. The text box above the index, where the cursor is flashing, lets you type in a topic you want to find in the index.

**3** Type drawing in the text box.

Notice as you type that the index moves to locate what you typed.

Sample help window for drawings

Notice that under the category drawings, there is a subcategory: creating using Paint.

**4 Highlight creating using Paint, then click Display.**

Help opens a topic screen that, in the window's right pane, gives a brief description of Paint and provides different ways for accessing the program, including through use of a hot link (Paint).

Not every Help topic contains a hot link to start the program it is talking about. However, when you do encounter one, it provides a convenient way to start the program to look at it while you read about the program in the Help topic.

## Using the Windows® XP tour

Whether you are new to computers or you have some experience, the Windows® XP tour is a good way to start.

To start the tour:

**1 Click Start, then click Tour Windows XP**

The Windows® XP Tour window appears.

- 2 Follow the instructions.

Sample Windows® XP Tour window

## Lesson 15: Turning off your computer

It is very important that you let the operating system turn off your computer. As it shuts down, the operating system performs a number of tasks that ensure that everything is in place the next time you turn on the computer. This lesson teaches you how to turn off your computer.

- 1 Click **Start**, then click **Turn Off Computer**.

The Turn off computer box appears.

- 2 Click **Turn Off**.

The computer turns off.

There are other ways to shut down your computer. For more information, see “[Powering down the computer](#)” on page 92.

# Chapter 6

## Exploring Your Options

---

In this chapter, you will explore other features of your notebook computer.

### Windows® XP special features

The Windows® XP operating system offers you several new features and enhancements, including:

- ❖ New system file protection
- ❖ A system restore function, allowing you to rollback the system to its previous mode
- ❖ An improved help center, support automation, and automatic Windows® operating system update
- ❖ Wizards to simplify setting up your home network
- ❖ Ability to share one Internet connection among multiple PCs
- ❖ An automatic discovery feature that allows your computer to detect new and intelligent devices

## Personalizing your desktop

Your desktop is your virtual workspace. This section explains how to customize its features for the way you like to work. You can customize the following aspects of the desktop:

- ❖ Taskbar — Which resources to display for quick access
- ❖ Web content — What information from the Internet to always display
- ❖ Desktop style — How windows are displayed and how to browse folders and files
- ❖ Toolbars — What information appears at the top of each window

### Customizing the taskbar

As you work, the taskbar changes to reflect what you are doing. Its icons provide shortcuts to programs, documents, files, folders, system features, and components. Open applications also have Forward and Backward buttons to allow navigation through folders, documents, and Web sites.

For example, you can personalize the taskbar to include your favorite URL addresses or local folders and programs.

---

*DEFINITION: URL stands for Uniform Resource Locator, which is the address that defines the route to a file on the Web or any other Internet facility. Generically, it is known as the World Wide Web site address.*

---

Having a list of favorite URLs handy saves time. Using it bypasses the need for you to launch your browser first.

To customize your taskbar settings, point to an empty space in the taskbar and click the secondary button.

---

## Changing desktop and browsing style

The operating system enables you to customize the way you view your desktop and browse the files and folders on your local computer or network file server.

You can make it so that:

- ❖ Items that normally require a double-click will open with a single click.
- ❖ Folders will open in their own window instead of in the same window.
- ❖ Folders are accompanied by a list of common tasks instead of displayed alone.

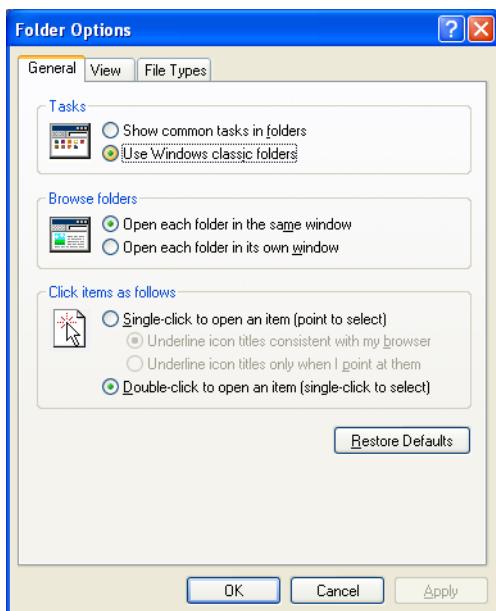

The options you choose determines how you browse in the operating system, regardless of whether you start from the desktop, My Computer, Windows Explorer, or Internet Explorer.

For more information about changing your desktop style, enter Desktop on the Index tab in Help and Support.

## Choosing a style

To select desktop and browsing style options:

- 1 Click **Start**, then click **My Computer**.  
The My Computer window appears.
- 2 Select the **Tools** menu, then click **Folder Options**.  
The Folder Options dialog box appears.

*Sample Web-style option*

- 3** Click the preferred options.
- 4** Click **Apply**, click **OK**.

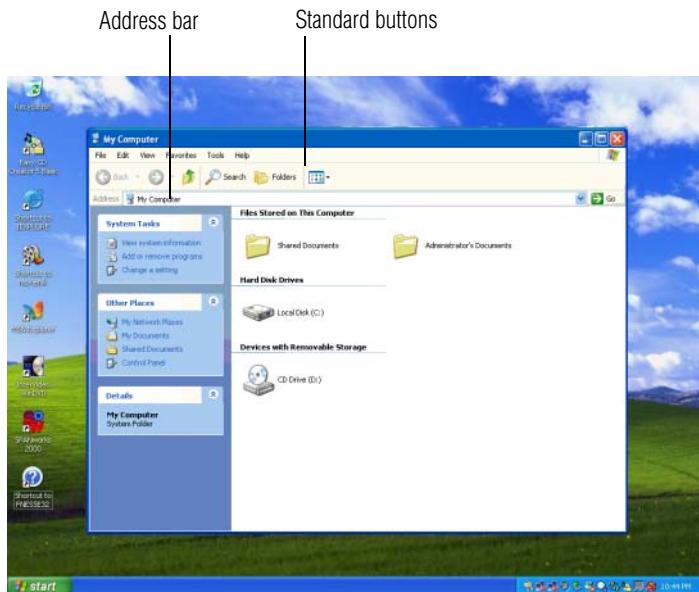

## Personalizing individual windows

Just as you can display a Web page on your desktop, you can also display a Web page in an individual window. If you subscribe to the Web page, it can be automatically updated on a regular basis. For example, using this Web integration feature you can monitor weather, game scores, stock prices, or headlines — all in the window of your choice.

## Customizing window toolbars

You can display one or more customizable toolbars at the top of a window. As you browse, the operating system detects the kind of information presented in the window and automatically displays the appropriate toolbar buttons and menus.

You can also add these toolbars to the taskbar.

*Sample toolbar locations*

The elements you can add to the top of the window are:

Toolbar element	Description
Address Bar	Opens Web pages, programs, folders, or documents. By default, the address bar shows your current location, and whether it is a folder or a Web page. You can browse to another location by typing an address — a URL, a path, or even a program name.  If you start typing a previously typed address, the AutoComplete feature finishes the address for you.
Standard buttons	Displays buttons for commonly used commands, such as copying, pasting, deleting items, changing views, and browsing backward and forward.

## Displaying a toolbar in a window

- 1 Click **Start**, then click **My Computer**.  
The My Computer window appears.
- 2 On the View menu, point to Toolbars, then click the name of the toolbar you want to display.  
The toolbar appears below the menu bar of the current window.

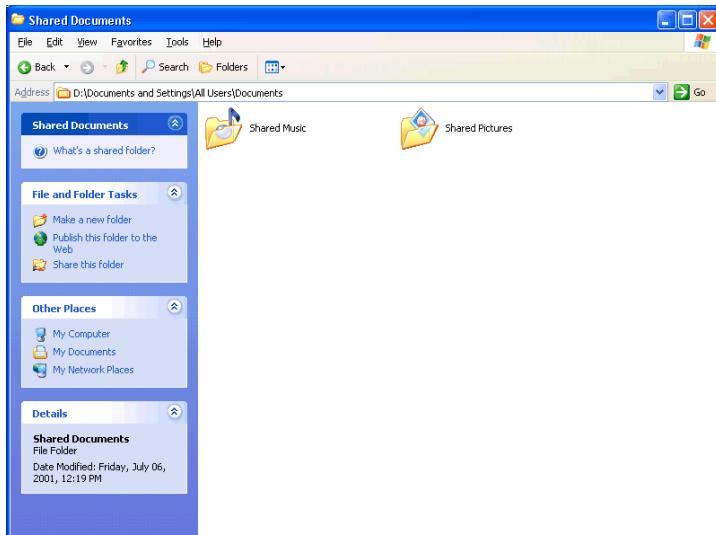

## Displaying information about each folder

In addition to displaying the contents of each window, you might find it helpful to have the operating system display the name of the folder and brief information about how to use the folder.

- 1 Click **Start**, then click **My Computer**.  
The My Computer window appears.

- 2** Double-click the folder you want to open.
- 3** In the **Tools** menu, select **Folder Options**.  
The Folders Options box appears.
- 4** In the Tasks section, click the button for **Show common tasks in folders**.
- 5** Click **Apply**, then **OK**.

Helpful information on how to use the folders appears on one side of the window.

*Sample folder with how-to information*

To remove the informational boxes:

- 1** In the Tools menu, select **Folders Options**.  
The Folders Options box appears.
- 2** In the Tasks section, click the button for **Use Windows classic folders**.
- 3** Click **Apply**, then **OK**.

## Using your computer at the office

By connecting an external monitor, external full-size keyboard, an external mouse and an external diskette drive, you can work with your notebook as if it were a standard office computer.

An external monitor connects to the RGB (monitor) port.

An external mouse, keyboard and diskette drive connect to the USB ports.

## Setting up for communications

In order to connect to the Internet, use an online service, or communicate across the telephone lines with another computer, you need:

- ❖ A modem (one comes with your computer)
- ❖ A telephone line
- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or online service if you plan to use the Internet

## Determining the COM port

Your modem is connected to one of the computer's COM (communications) ports. The default setting for the modem is COM3.

The following procedure is intended to support you if you need to either upgrade your modem or reset the port to the default settings.

If you're having trouble connecting through the modem, you may need to determine the current COM port name and possibly change it.

To find out which port your modem is connected to in the operating system:

- 1 Click **Start**, then click **Control Panel**.

The Control Panel appears.

**2** Click **Printers and Other Hardware**.

**3** Click **Phone and Modem Options**.

The Phone and Modem Options window appears.

**4** Click the **Modems** tab.

A location box appears.

**5** In the **Attached to** field, the COM port is specified.

**6** Your modem should be listed under **Modem**.

**7** To verify that the modem is set up properly:

- ❖ Click the port to which your modem is connected.
- ❖ Click **Properties**.
- ❖ Click the **Diagnostics** tab.
- ❖ Click **Query Modem**.

The Modem AMR Properties box appears.

**8** Click the **General** tab.

The computer should indicate whether the modem is working properly.

**9** If the modem isn't working properly, click **Troubleshooting** and follow the instructions.

**10** Click **OK** to close the properties box, then the Phone and Modem Options box.

**11** Close the Control Panel.

## Connecting the modem to a telephone line

Before you can use the modem, you must connect it to a standard telephone line. See “[Connecting the modem](#)” on page 90.

For more detailed information regarding your computer's modem, visit Toshiba's web site at [toshiba.com](http://toshiba.com).

## Connecting your computer to a network

You can connect your computer to a network to increase its capabilities and functionality.

### Accessing a network

To access:

- ❖ A wired network at the office, connect an Ethernet cable to the RJ45 jack on your computer.
- ❖ A remote network, you need a dial-up connection.
- ❖ A wireless network, you need a wireless networking PC Card, or contact your authorized Toshiba representative.

### Setting up the connection

To set up a dial-up connection, use the New Connection Wizard:

- 1 Click **Start** and point to **All Programs**.
- 2 Point to **Accessories**, then to **Communications**, and click **New Connection Wizard**.
- 3 Follow the on-screen instructions.

The computer connects to the network.

### Setting up a wireless connection

For information on how to set up a wireless connection, refer to your wireless networking device documentation.

### Accessing the wireless modules using your system tray

The following information applies to systems with the optional Wi-Fi features:

When using your Wi-Fi Mini PCI module, your computer may display a PC Card icon in the desktop's system tray to indicate that it is in use. Do not confuse the system tray's icon

---

with other removable PC Card devices you may have installed.

You *can* use the system tray's PC Card icon to turn off your Wi-Fi Mini PCI module. However, you will need to restart your computer to turn your Wi-Fi Mini PCI module back on.

Your Wi-Fi Mini PCI module is integrated into your computer system. It is recommended that you do not remove the module from your computer. For assistance, contact a Toshiba Wireless Authorized Service Partner.

## Setting up a direct cable connection

To establish a direct cable connection with another computer:

- 1 Click Start, All Programs.**
- 2 Point to Accessories, Communications, and click New Connection Wizard.**
- 3 Click Next.**
- 4 Select Set up an advanced connection.**
- 5 Click Next.**
- 6 Select Connect directly to another computer.**
- 7 Choose the appropriate role for your computer:**
  - ❖ Guest
  - ❖ Host
- 8 Follow the on-screen instructions.**

## An overview of using the Internet

The following sections give a quick introduction to the Internet and some of its exciting features, under these headings:

- ❖ [The Internet](#)
- ❖ [The World Wide Web](#)

- ❖ Internet Service Providers
- ❖ Connecting to the Internet
- ❖ Surfing the Internet
- ❖ Internet features
- ❖ Uploading and downloading files from the Internet

For more information about the Internet refer to, “[Lesson 3: Learning about the Internet](#)” on page 122.

## The Internet

The Internet is an association of thousands of networks and millions of computers around the world connected by communications lines. They all work together to share information.

## The World Wide Web

The World Wide Web (or ‘Web’) is a subset of the Internet — a collection of interlinked documents (located on computers connected to the Internet) that work together using a specific Internet protocol called Hypertext Transfer Protocol (HTTP).

The World Wide Web offers information as text, images, audio, or video to be referenced from anywhere in the world. Special programs called Web browsers are specifically designed to work with HTTP. They make it easier to connect to a particular network address and send and receive information.

## Internet Service Providers

To connect a computer directly to the Internet, many people and businesses use an Internet Service Provider (ISP). An ISP is a company that has the equipment and the telecommunication lines necessary to maintain an Internet connection.

---

You can connect to the Internet by using a telephone and modem or through other higher-speed communication methods such as Digital Subscriber Lines (DSL), cable, and satellite links.

## Connecting to the Internet

To connect to the Internet, you need:

- ❖ A modem
- ❖ A Web browser
- ❖ A telephone line
- ❖ An Internet Service Provider (ISP) account

Once you have established an ISP account, you can access the Internet.

- 1 Connect your computer's modem to a telephone line.

For more information on connecting a modem, see “[Connecting the modem](#)” on page 90.

- 2 Start your Web browser. Have your modem dial the ISP's telephone number, and establish a connection with the ISP's computer.

## Surfing the Internet

Once connected to the Internet, the Web browser displays a home page, for example, your ISP's home page on the Internet or your company's Web site home page.

To visit a desired Web site, type in the Web address. The Web address, or Uniform Resource Locator (URL), is a unique identifier for that computer system linked to the Internet. Web addresses can also appear within a Web page's text, and are known as links. Clicking a link automatically transfers your Web browser to that site.

You can also use a Search Engine, a Web site specifically designed to help you look for information.

---

## Internet features

The Internet offers many types of communication tools to help you perform many tasks.

- ❖ Internet email

To send and receive email of your own, you need a mailbox on the Web, or an email address.

If you have an account with an ISP, you can probably set up an email address at the same time as you sign up for the service.

- ❖ Internet chat rooms

A chat room is a Web site that offers a place where people with similar interests and ideas can communicate in real-time, one-on-one or in groups, by typing messages which are instantly viewed by others on their computer screens.

- ❖ Internet news groups

A news group is similar to a chat room, but instead of using a dedicated site to converse about a specialized subject with others in real-time, it uses a Web site as a clearinghouse where all the messages are placed, like a gigantic bulletin board.

- ❖ Online shopping

Many Web sites offer products and services for sale.

## Uploading and downloading files from the Internet

Transferring files from one computer to another is termed uploading (transferring data from your computer to a site on the Web), or downloading (transferring data from a site on the Web to your computer).

There are several ways to upload or download data. It can be as simple as attaching a file or document to an email, or you can use the File Transfer Protocol (FTP) features of your Web browser to transfer large amounts of data.

---

## Exploring video features

Your computer's video features include:

- ❖ Viewing Windows® presentations or DVD movies either on the computer screen (display panel or external monitor) or on a television set.

### Viewing presentations or DVD movies on your television

Your computer is equipped with an S-video jack and an audio/headphones jack.

*NOTE: Video cables are not included with your computer. You will need to purchase the appropriate video cable.*

---

To view a DVD movie or Windows® presentation in full-screen mode on your TV:

- 1 Connect the S-video cable to your television.

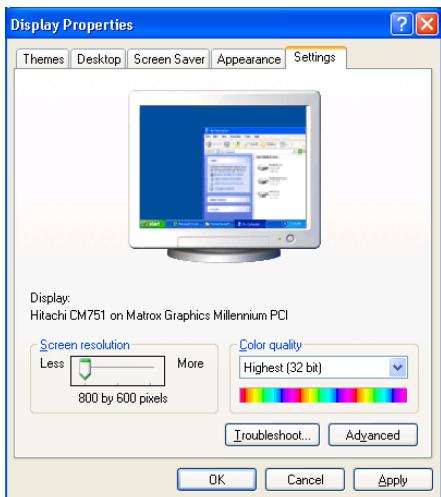

*NOTE: Video cables are not included with your computer. To connect a device to the S-video jack, you'll need to purchase the appropriate cable.*

---

- 2 Change the display properties setting to 800 x 600:
  - ❖ Right-click anywhere on your desktop and select **Properties**.

The Display Properties dialog box appears.

*Sample Display Properties dialog box*

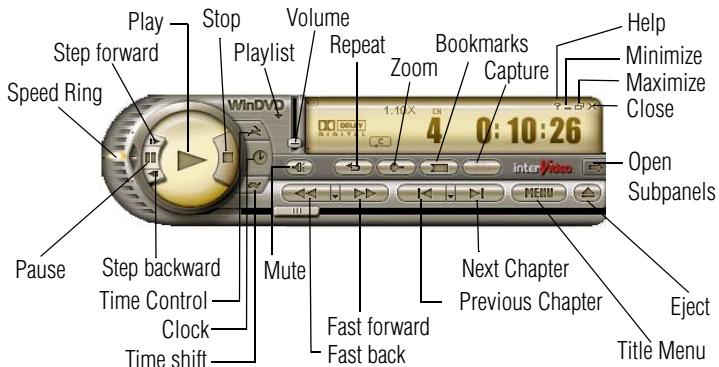

- ❖ Click the **Settings** tab.
- ❖ Slide the Screen area slider bar toward **Less** until the setting reads **800 x 600**.
- ❖ Click **Apply**.

**3** Press FN+F5 four times.

**4** Start playing your movie or presentation.

## Playing DVDs

- 1** Open the DVD-ROM or Multifunction drive tray.
- 2** Place the DVD in the DVD-ROM or Multifunction drive.
-  **3** Launch WinDVD™ and press the **Play** button.

*Sample WinDVD control panel*

For more information about using WinDVD, see  
[“WinDVD™” on page 174.](#)

## Exploring audio features

You can use your computer to record sounds using an external microphone. You can play .wav sound files or audio CDs using the built-in speakers, headphones or external speakers.

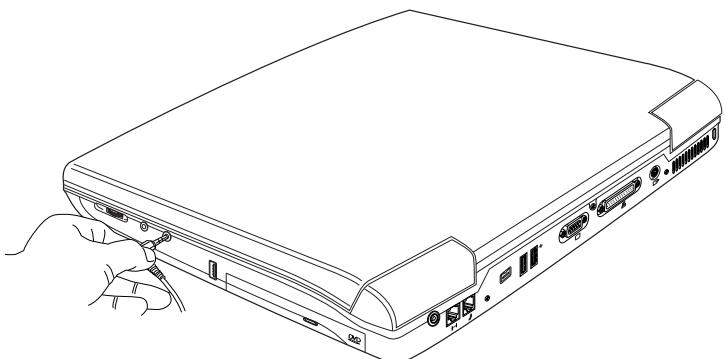

### Recording sounds

You can make audio recordings and save them as .wav files by connecting an external microphone or other sound source to the microphone jack and using the Sound Recorder feature in the operating system.

**DEFINITION:** A .wav (pronounced “wave”) file is the format for storing sound in files.

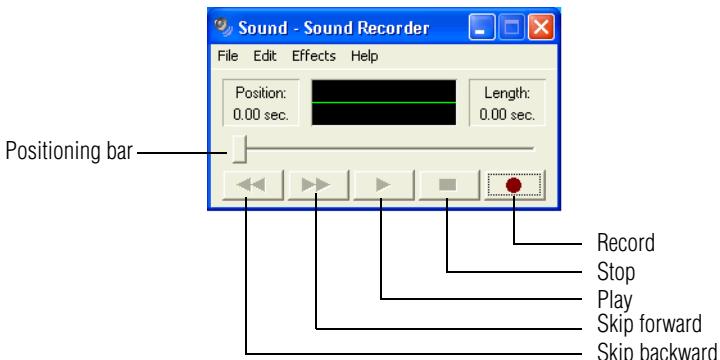

## Using a microphone

*Attaching a microphone*

- 1 Connect an external microphone to the computer.
- 2 Click **Start**, point to **All Programs**, **Accessories**, **Entertainment**, then click **Sound Recorder**.

*Sample Sound Recorder screen*

- 3 Click the **Record** button and speak normally into the microphone.

*NOTE: You can only record 60 seconds at a time.*

- 4 When you have finished recording, click the **Stop** button.
- 5 To hear what you just recorded, click the **Play** button.
- 6 To save the file, select **Save** from the **File** menu.

## Adjusting recording quality

The better the quality of the recording, the more disk space the sound file requires. Experiment to find a balance that fits your needs.

- 1 Open Sound Recorder, if necessary (click **Start**, point to **All Programs**, **Accessories**, **Entertainment**, then click **Sound Recorder**).
- 2 In the Sound Recorder window, click **Edit**, then click **Audio Properties**.
- 3 In the Audio Properties dialog box, adjust the Sound Playback quality and volume, and the Sound Recording volume.
- 4 Click **OK**.

Your new settings take effect the next time you record.

## Using external speakers or headphones

Your computer is equipped with a full stereo sound system and internal speakers. Instead of using the internal speakers, you can connect headphones or a pair of external stereo speakers.

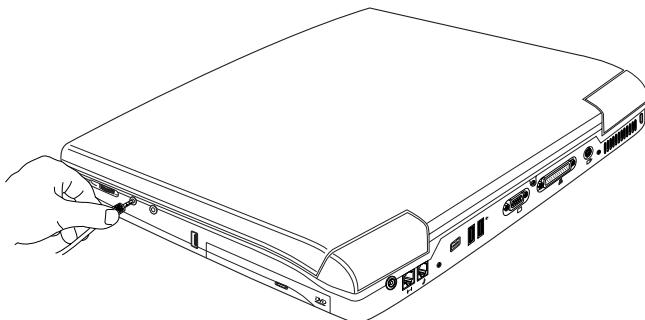

*TECHNICAL NOTE: Use amplified speakers that require an external power source. Other types of speakers will be inadequate to produce sound from the computer.*

To play back sound files through external speakers or headphones:

- 1** Locate the headphone jack on the right side of the computer.

*Attaching a headphone or speaker cable*

- 2** Using any necessary adapters, plug the cable from the headphones or external speakers into the headphone jack.

The headphone jack requires a 16-ohm stereo mini-jack.

- 3** Adjust the volume:

- ❖ For external speakers, use the volume controls on each speaker.
- ❖ For headphones, use the computer's volume control dial.

---

## Using PC Cards

PC Cards expand your computer's capabilities and usefulness. You can purchase additional PC Cards from your dealer. Most PC Cards conform to the PCMCIA (Personal Computer Memory Card International Association) standard.

Your computer has two stacked PC Card slots and supports two types of PC Cards, known as types II and III:

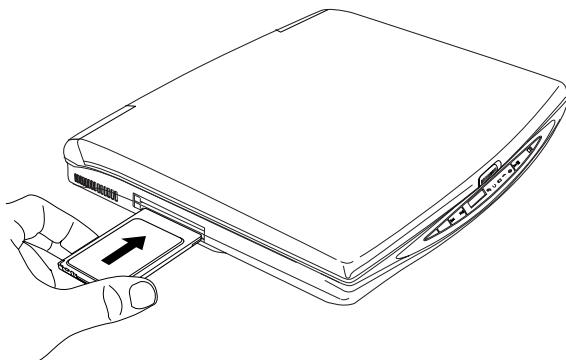

- ❖ A Type II card is typically used for memory storage, as a network card, and so on. You can install two Type II cards.
- ❖ A Type III card is used for removable hard disks and other functions that require a larger card. You can install one of these cards.

Check the documentation that came with the PC Card to see if it conforms to the PCMCIA 2.1 standard, or later. Other cards may work with your computer, but are likely to be much more difficult to set up and use.

### PC Card supporting software

The operating system provides the Card and Socket Services for your PC Card and is installed automatically. Even if your PC Card comes with its own version of Card and Socket Services, you should use the files included in the Windows® XP operating system.

## Inserting PC Cards

*Inserting a PC Card*

- 1** If your PC Card does not support hot swapping, save your data and turn off the computer before inserting the PC Card. For more information, see “[Hot swapping](#)” on page 170.
- 2** Hold the PC Card with the arrow or main label side up and the connector side toward the slot.
- 3** Align the card connectors with an available PC Card slot and carefully slide the card into the slot until it locks into place.

---

*NOTE: If you have a Type III card, insert the connector into the lower slot. If you have a Type II card, you can insert it into either the upper or the lower slot.*

---

There are two eject buttons, one per slot.

---

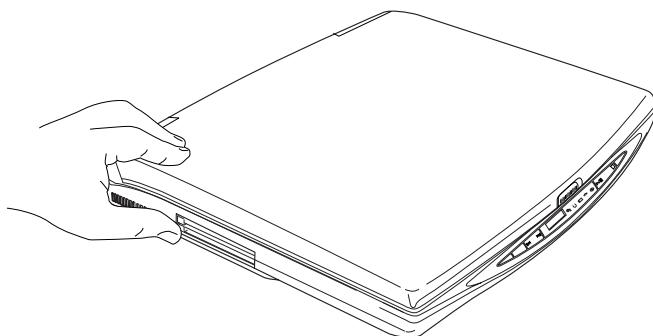

*CAUTION: To avoid damaging the PC Card or the computer, do not force the card into the PC Card slot.*

---

## Removing PC Cards

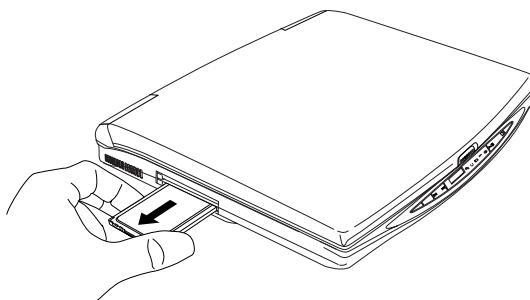

- 1 Click the **Safely Remove Hardware** icon on the taskbar.
- 2 Click **Safely remove xxxx**, where xxxx is the identifier for your PC Card.

The operating system advises you that you may safely remove the card.

*Ejecting a PC Card*

- 3 Remove the PC Card and store it properly.

*Removing a PC card*

## Hot swapping

One of the great things about PC Cards is that you can replace one PC Card with another while the computer is on. This is called “hot swapping.”

### Hot swapping precautions

Although you can insert a PC Card at any time, to avoid data loss never remove a card while it is in use. For example:

- ❖ Never remove an ATA card while the system is accessing it.
- ❖ Never remove a network card while you are connected to a network.
- ❖ Never remove a SCSI card while any of the SCSI devices connected to it are operating.

*DEFINITION: SCSI is an acronym for Small Computer Systems Interface. A single SCSI PC Card enables you to connect several SCSI devices, such as a scanner or digital camera to your computer.*

---

Before removing a PC Card, shut it down by clicking the **Safely Remove Hardware** icon on the taskbar. Once the PC Card has stopped, you can safely remove it.

# Chapter 7

## Toshiba Utilities

---

Your computer includes several utilities designed to help you to reconfigure your system to best meet your individual needs. Together, these allow you to ascertain certain system details, set additional options, or change default options. These utilities are described in this chapter:

- ❖ Power Management

## Power Management

The Power Management feature enables you to control your computer's power usage, regardless of the source, and use the many preset power modes, or define your own.

To access the Toshiba Power Management Utility.

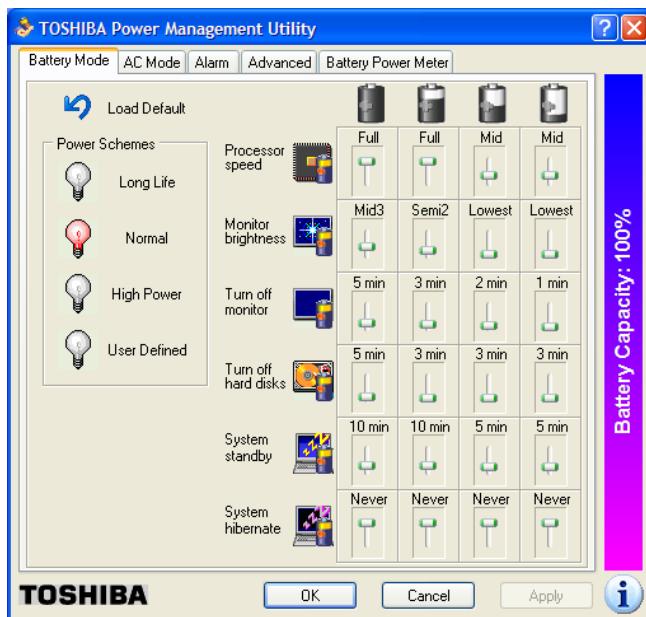

- 1 Click **Start**, then click **Control Panel**.

The Control Panel appears.

- 2 Click the **Performance and Maintenance** icon.

- 3 Click the **Toshiba Power Management** icon.

The Toshiba Power Management Utility window appears.

Sample TOSHIBA Power Management Utility window

---

You may also access the Toshiba Power Management Utility through the Toshiba Console:

- 1** Click **Start**, then click **All Programs**.
- 2** Point to **Toshiba Console**, then click the resulting **Toshiba Console** selection.

The Toshiba Console window appears.

- 3** Double-click the **Power Management** icon

You may choose a power-saving management strategy to best suit your computing needs. If you are running on batteries and the programs that you are using do not require a lot of system resources, you may experience longer work sessions by enabling the Normal or Long Life settings.

By changing the options that appear in the Toshiba Power Management window and clicking **OK**, you can reconfigure that function. Any options that you change become effective when you click either **OK** or **Apply**.

## AC mode tab

This section has two preset power usage mode — Full Power and User Defined. Toshiba recommends use of the preset Full Power mode.

## Battery mode tab

This section lists the preset modes along with the estimated battery life for each mode. The preset modes are:

- ❖ Long Life
- ❖ Normal
- ❖ High Power
- ❖ User Defined

Although you can change the properties for any of these modes, this is not recommended.

# Chapter 8

## WinDVD™

---

WinDVD™ is a software program for playing DVDs. This chapter explains how to use this program.

### Playing DVDs

---

*TECHNICAL NOTE: For optimum DVD performance, play DVDs while your computer is connected to AC power.*

---

For systems with a DVD-ROM or multifunction drive, you can use WinDVD to play DVDs. WinDVD is an easy-to-use, full-featured multimedia control center that helps you get the most out of the exciting world of DVD technology. Your computer comes with WinDVD preinstalled.

---

*WARNING: Before playing a DVD, turn down the volume. Playing the disc at maximum volume could damage your ears.*

---

Insert a DVD into the drive. The computer automatically detects the disc in the drive and will prompt you what to do.

*Sample DVD Drive Window*

*NOTE: If you wish to have WinDVD run automatically, select Play DVD movie using WinDVD, then select the Always do the selected action checkbox. This checkbox is unchecked by default.*

To open WinDVD manually:

- 1 Double-click the WinDVD icon on your desktop, or click Start, and point to All Programs.
- 2 Point to **InterVideo WinDVD**, then click **InterVideo WinDVD**.

The WinDVD player window opens.

Sample WinDVD video window with the control panel

## Using the WinDVD slider bar (location)

 The slider bar enables you to move forward or backward through the DVD content. Move the slider bar to the left to go backward or move it to the right to go forward.

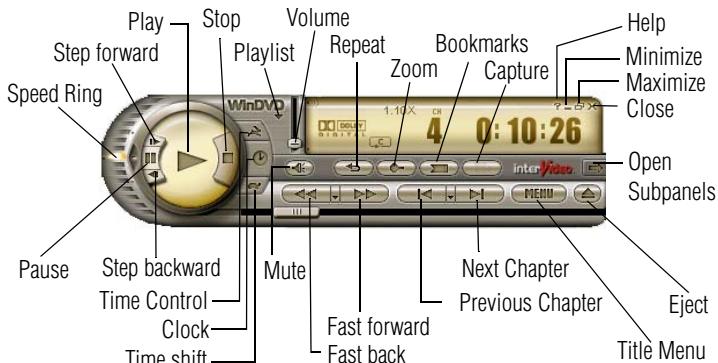

## Using the WinDVD control panel

The WinDVD control panel resembles the control panel of a standard home DVD player.

*TECHNICAL NOTE: The DVD author determines what features the DVD supports. Depending on the DVD format and your computer's hardware configuration, some of the control panel features may be unavailable when playing a DVD. Unsupported features may not appear or may appear gray, and you cannot select them.*

---

Sample WinDVD control panel

You can open a shortcut menu by positioning the cursor over the WinDVD window (other than over the control panel), then clicking the secondary button. The shortcut menu contains the same features as the control panel, plus the enable caption feature, which displays captions for the hearing impaired.

You can also create a playlist, to customize the order in which the DVD content plays. Once a DVD is playing, the counter displays the current chapter and elapsed time, in *hours:minutes:seconds* format.

From the WinDVD control panel, you can open an expanded control panel by clicking the **expanded controls button**. The expanded control panel contains several advanced features. See “[Using WinDVD Advanced Features](#)” on page 181 for an explanation of these features.

## Using the control panel playback buttons

Once you have inserted a DVD and started WinDVD, you are ready to play the disc. Using the control panel, you can play a DVD from the beginning, or move to a desired location then begin playing.

*Sample WinDVD control panel with expanded view for showing advanced features*

<i>Click this</i>	<i>To do this</i>	<i>Or use keyboard shortcut</i>
	<b>Play</b> — Starts disc playback.	[spacebar]
	<b>Step forward</b> — Steps forward in the playback one frame at a time.	None
	<b>Pause</b> — Pauses disc playback. Resume playback by clicking Play.	[spacebar]
	<b>Step reverse</b> — Steps backward in the playback one frame at a time.	None
	<b>Stop</b> — Stops playback. Restart the movie by clicking Play.	[End]
	<b>Volume</b> — Click and drag the slider up to increase volume and down to decrease volume.	Shift ↑ (increases) Shift ↓ (decreases)

---

*Click this*

*To do this*

*Or use keyboard  
shortcut*

**Speed Ring** — Enables you to control the speed at which the DVD plays. Move the slider upward to play the movie in fast forward. Move it further upward to increase forward speed. Move the slider downward to play the movie in fast reverse. Move it further downward to increase reverse speed. Placing the slider in the center, or clicking Play, plays the DVD at normal speed. This will play the DVD at normal speed.

**Increase** — Click to increase playback speed.      None

**Time Stretch Clock** — Enables you to select and control playback time.      None

**Decrease** — Click to slow playback speed.      None

**Fast Rewind** — Starts fast reverse movie playback.      R

**Fast Forward** — Starts fast forward movie playback.      F

**Previous Chapter** — Skip to the previous chapter in the movie.      PgUp

**Next Chapter** — Skip to the next chapter in the movie.      PgDn

*Click this*

*To do this*

**Menu** — Opens the various menus of the inserted DVD.

*Or use keyboard shortcut*

T

**Mute** — Click to mute movie sound. Click again to restore movie sound to its original level.

M

**Repeat** — Shows the current media loop settings, including repeat chapter, repeat title, loop, or no repeat.

[Ctrl] B

**Zoom/Unzoom** — Zooms in on the movie window for a closer look. After zooming in, you can pan around to see other areas of the image.

None

**Bookmarks** — Opens the Bookmark browser, which enables you to bookmark scenes in a movie so that you can skip to them when selected.

[K]

**Capture** — Opens the Capture browser, which enables you to capture still images of a movie.

None

**Eject** — Ejects the disk. If the disk is still playing, this button stops play before the disk is ejected.

E

## Maximizing the video window

To close the WinDVD control panel and expand the video window to fill the screen, click the Maximize button.

To display the control panel again, double-click anywhere in the video window.

## Using WinDVD Advanced Features

*TECHNICAL NOTE: The DVD author determines what features the DVD supports. Depending on the DVD format and your computer's hardware configuration, some of the control panel features may be unavailable when playing a DVD. Unsupported features may not appear or may appear gray, and you cannot select them.*

The features described in this section may be available on the WinDVD expanded control panel. To open the expanded control panel, click the expanded controls button on the WinDVD main control panel. Select from the following options: Navigation, Language, Display, Color, and Audio effect.

Sample WinDVD with expanded subpanel

## Using playlists

---

*TECHNICAL NOTE: The DVD author determines what features the DVD supports. Depending on the DVD format and your computer's hardware configuration, some of the control panel features may be unavailable when playing a DVD. Unsupported features appear gray, and you cannot select them.*

---

The playlist selection options are accessed by selecting the **Expand subpanel** button and the Navigation submenu. The playlist options are found within the Navigation menu.

Options to use and create playlists allow you to open files, open existing playlists, create new playlists, and select DVDs from an existing folder. A playlist is a customized list of DVD files in the order in which you want to view them. For example, you may want to create a playlist for DVDs that contain music files, so you can play the music selections you want in the order you want to hear them. You can only save one playlist at a time.

---

*NOTE: Some audio and video formats are not supported.*

---

### Creating a Playlist

To create a new playlist:

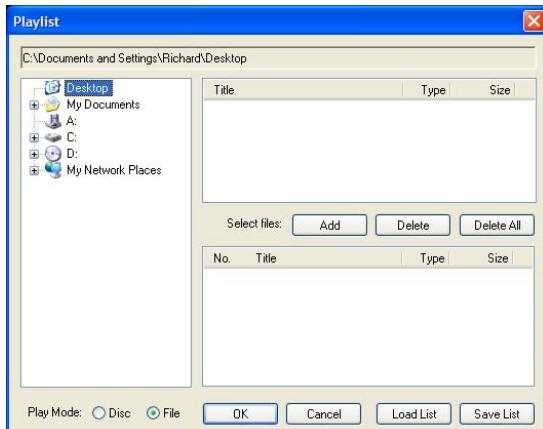

- 1 Open the playlist menu by clicking the **Playlist** button. See “[Using the WinDVD control panel](#)” on page 176 to locate the playlist button.

*Sample Playlist dialog*

**2** Select **New Playlist** from the menu.

The Playlist window opens.

*Sample WinDVD Playlist window*

**3** Select **File** to enable selection of a file, or **Disc** to create a playlist for an entire disc.

**4** Locate each file (you may select multiple files) for your playlist using the directory browser.

**5** Highlight the files and click **Add**, then **OK** to confirm your selection.

**6** After adding all the files you want to include in the new playlist, click **Save List**.

The Save As dialog appears.

7 Browse to the folder where you want to save your playlist, name the playlist, then click **Save**.

Playlist files are saved with the file extension .plf. The playlist can be reopened and played.

## Playing a Playlist

After creating a new playlist, you can open it with WinDVD. The playlist keeps your selections organized so that you can play your favorites at any time.

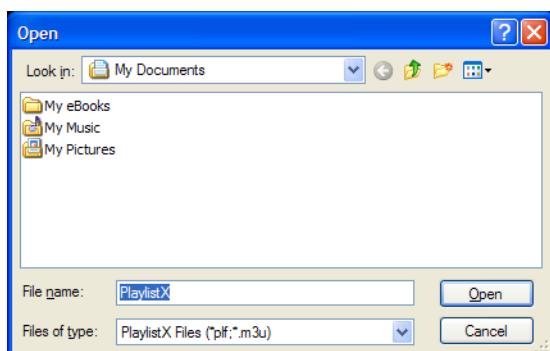

To play a playlist:

1 Open the playlist menu by clicking the **Playlist** button. See “Using the WinDVD control panel” on page 176. to locate the playlist button.

*Sample Playlist dialog*

2 Select **Open Playlist** from the menu.

*Sample Open Playlist dialog*

---

- 3 Locate the playlist you wish to open, then click **Open**.  
The Playlist window appears.
- 4 Click **Load List** to open the saved playlists.
- 5 Browse to the playlist you want to open then click **Open** and WinDVD displays the playlist.

## Getting Help

Click the **Help** button to open the WinDVD Help system.

## Exiting WinDVD

Click the **Close** button, to exit WinDVD.

# Chapter 9

## If Something Goes Wrong

---

Some problems you may encounter when using your notebook computer are relatively easy to identify and solve. Others may require help from your dealer or the manufacturer of a software program.

This chapter aims to help you solve many problems by yourself. It covers the problems you are most likely to encounter.

If all else fails, contact Toshiba. You will find information on Toshiba's support services at the end of this chapter.

### Problems that are easy to fix

#### **Your program stops responding.**

If you are working with a program that suddenly freezes all operations, chances are the program has stopped responding. You can exit the failed program without shutting down the operating system or closing other programs.

---

To close a program that has stopped responding:

- 1 Press Ctrl, Alt, and Del simultaneously.
- 2 Click **Windows Task Manager**.

The Windows Task Manager window appears.

- 3 Click the **Applications** tab.

If a program has stopped responding, the words “not responding” appear beside its name in the list.

- 4 Select the program you want to close, then click **End Task**.

Closing the failed program should allow you to continue working. If it does not, continue with step 3.

- 5 Close the remaining programs one by one by selecting the program name, then **End Task**.
- 6 Click **Start, Turn off computer**.
- 7 The Turn off computer window appears.
- 8 Click **Turn off**.

The computer turns off.

### Your program performs an illegal operation.

If you receive the message, “Your program has performed an illegal operation,” you should record the details of the message and consult the software manufacturer.

To record the details:

- 1 Click the **Details** button and select the text the operating system displays.

The Details button displays information that the software manufacturer needs to help you solve your problem.

- 2 Press Ctrl and c simultaneously to copy the text to the clipboard.
- 3 Open Notepad (click **Start**, point to **All Programs**, then point to **Accessories** and click **Notepad**).

---

- 4** Press Ctrl and v simultaneously to paste the details into Notepad.
- 5** Press Enter twice to insert a paragraph break, and type some notes describing what you were doing when you received the message.
- 6** Save the file and refer to it when you contact the software manufacturer.

## Problems when you turn on the computer

These problems may occur when you turn on the power.

### The computer will not start.

Make sure you attach the AC adapter and power cable properly or that the battery is fully charged.

Press and hold down the power button for a few seconds.

If you are using the AC adapter, check that the wall outlet is working by plugging in another device, such as a lamp.

### The computer starts but when you press a key nothing happens.

You probably have a software or resource conflict. To clear the condition, press Ctrl, Alt, and Del simultaneously, then select Shutdown, and then Restart to reboot the system.

Clearing the condition may get the computer running, but it won't solve a resource conflict. Read the documentation that came with the conflicting device and "[Resolving a hardware conflict](#)" on page 192.

### The computer is not accessing the hard disk or the diskette drive.

Your computer normally loads the operating system from the hard disk. If you have a hard disk problem, you will not be able to start the computer. Insert a system diskette into the

---

external diskette drive and press the left or right arrow key and choose your boot-up device.

---

*HINT: Press F12 as you power on the computer to access the menu.*

---

### **The computer displays the WARNING RESUME FAILURE message.**

The computer was placed in Stand By mode and the battery has discharged. Data stored in the computer's memory has been lost.

To charge the battery, leave the computer plugged into a live wall outlet for several hours. For more information, see “[Power and the batteries](#)” on page 196.

### **The computer displays the Non-System disk or disk error message.**

Make sure there is no diskette in the diskette drive. If there is one, remove it and press any key to continue. If pressing any key does not work, press Ctrl, Alt, and Del to restart the computer.

## **The Windows® operating system is not working**

Once you are familiar with the desktop and used to the way the operating system responds to your work routine, you can easily detect if the operating system is not working correctly. For example:

- ❖ The operating system fails to start after the Starting Windows XP message appears.
- ❖ The operating system takes a long time to start.
- ❖ The operating system responds differently from the normal routine.

- ❖ The screen does not look right.

Unless a hardware device has failed, problems usually occur when you change the system in some way such as installing a new program or adding a device.

If you experience any of these problems, use the options in the Startup menu to fix the problem.

## Using Startup options to fix problems

If the operating system fails to start properly, you may have to change your system's configuration or verify the startup procedure to fix the problem. To do this, use the options in the Startup menu. This section describes each option and when to use the procedure.

To open the Startup menu:

- 1 Restart your computer.
- 2 Press F8 when your computer starts.

The Windows® Advanced Options menu displays these options:

- ❖ Safe Mode
- ❖ Safe Mode (with Networking)
- ❖ Safe Mode (with Command Prompt)
- ❖ Enable Boot Logging
- ❖ Enable VGA Mode
- ❖ Last known good configuration (your most recent settings that worked)
- ❖ Directory Services Restore Mode (Windows® domain controllers only)
- ❖ Debugging Mode
- ❖ Start Windows® normally
- ❖ Reboot

- ❖ Return to OS Choices (menu)

For additional information, refer to “[Lesson 13: Using System Restore](#)” on page 142, as well as your Windows® documentation for further explanation.

*TECHNICAL NOTE: If your computer is connected to a network, the Startup menu may display different versions of Safe mode.*

## Internet problems

### My Internet connection is very slow.

Many factors contribute to the speed with which you can surf the Internet. They include: modem speed, time of day (when everyone else is surfing, your access can be slow) and popularity of the site. If accessing a particular site is very slow, try later.

### My browser can't find the URL address I typed in.

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character, comma instead of period (“dot”) or other mistakes will make it impossible for your browser to locate the site.

### My browser can't find a site I bookmarked.

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today, or its server may be down for temporary repair. Try again later.

## The Windows® XP operating system can help you

If the operating system has started properly, but you still have a problem using your computer, the online Help can assist you in troubleshooting the problem.

To access Windows® XP Help and Support:

**1 Click Start, then click Help and Support.**

The Help and Support window appears.

**2 Then do one or both of the following:**

- ❖ In the search field, type in the topic of the problem with which you need help and follow the on-screen instructions.
- ❖ Click a problem you would like help with from the listings and follow the on-screen instructions.

You can connect to Support Online by clicking **Support** from the menu.

## Resolving a hardware conflict

If you receive an error message telling you there is a device driver conflict or a general hardware problem, try using Windows® Help and Support to troubleshoot the problem first.

For help on hardware conflicts:

- 1 Click Start, then click Help and Support.**
- 2 Click the **Hardware** link in the window's left pane.**  
A list of category links appear.
- 3 Click the **Fixing a hardware problem**.**
- 4 Choose from specific topics and follow the steps.**

If there is still a problem, the operating system should display a message that explains what the conflict is.

## A plan of action

The smooth operation of the system depends on the interaction of all devices, programs, and features. If the system or one of its attached devices isn't working, resolving the problem can be time-consuming and frustrating.

---

The recommended procedure for getting multiple devices to work together is to add and set up one device at a time. After you add each device, test it to make sure it and all previously connected devices work.

The device most recently connected to the system is the one most likely to be causing a hardware conflict.

## Resolving hardware conflicts on your own

Computer components need resources to accomplish a task. A device, such as a disk drive or a modem, needs a channel to the computer's Central Processing Unit (CPU). It also needs a direct channel to the computer's memory to store information as it works. These channels of communication are commonly referred to as system resources.

### Interrupt Request Channel

The channel to the CPU is called an Interrupt Request (IRQ) because it interrupts what the processor is doing and requests some of the processor's time.

### Direct Memory Access

Similarly, the data required by the device is stored in a specific place or address in memory called the Direct Memory Access (DMA). The DMA provides a dedicated channel for adapter cards to bypass the microprocessor and access memory directly. If two or more devices use the same DMA, the data required by one device overwrites the data required by the other, causing a hardware conflict.

## Resolving conflicts

There are three things you can do to resolve hardware conflicts:

- ❖ Disable the device.

For an older device, remove it from the computer.

- ❖ Disable another system component and use its resources for the new device, see “[Fixing a problem with Device Manager](#)” on page 194.
- ❖ Reconfigure the device so that its requirements do not conflict. Refer to the device’s documentation for instructions about changing settings on the device.

### Fixing a problem with Device Manager

Device Manager provides a way to check and change the configuration of a device.

---

*CAUTION: Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.*

---

### Disabling a device

- 1 Click **Start**, **Control Panel**, and then **Performance and Maintenance**.
- 2 Click the **Computer Management** icon.
- 3 Click **Device Manager** in the left frame.
- 4 Select the specific device from the device category.
- 5 In the toolbar, look to the far right for an icon of a monitor with a strike mark through a circle on the front. This is the disable feature.
- 6 Click the icon.  
You are given the option of disabling the device.
- 7 Click **yes** or **no**, whichever is appropriate.

## Checking device properties

Device Manager provides a way to view the properties of a device. Properties include the name of the manufacturer, the type of device, the drivers installed, and the system resources assigned to the device.

To check a device's properties:

- 1 Click **Start, Control Panel, Performance and Maintenance**, and then **Administrative Tools**.
- 2 Click the **Computer Management** icon.
- 3 Click the **Device Manager** button.
- 4 To view the device(s) installed, double-click the device type.
- 5 To view the properties, double-click the device.

The operating system displays the Device Properties dialog box, which provides an array of tabs. They include:

- ❖ The **General** tab, which provides basic information about the device.
- ❖ The **Resource** tab, which lists resources assigned to the monitor, DVD-ROM or Multifunction drive and other power-using functions.
- ❖ The **Drivers** tab, which displays the drivers being used by the device and lists some ways to fix a problem.

A Troubleshooting button is also present.

Click **troubleshooting**.

A Help and Support window for that device appears.

For more information about Device Manager, refer to Windows® XP online help.

- ❖ The **Resource** tab, which lists resources assigned to the monitor, DVD-ROM, DVD-ROM/CD-RW, diskette disk drive, and other power-using functions.
- ❖ The **Drivers** tab, which displays the drivers being used by the device.

### Memory card problems

Incorrectly connected or faulty memory modules may cause errors that seem to be device-related. It is worthwhile checking for these first:

- 1 Click **Start**, then click **Turn Off Computer**.
- 2 Click **Turn Off**.

The operating system shuts down and turns off the computer automatically.

- 3 Remove the memory module.
- 4 Reinstall the memory module, following the instructions in “[Installing additional memory \(optional\)](#)” on page 57, and making sure it is seated properly.
- 5 Check for the error again.
- 6 If the error recurs, remove the memory module entirely and check for the error again.

If removing the memory module eliminates the error, the memory module may be faulty. If the error recurs without the memory module installed, the error is not caused by the memory module.

### Power and the batteries

Your computer receives its power through the AC adapter and power cable or from the system batteries (main battery and real-time clock (RTC) battery). Power problems are interrelated. For example, a faulty AC adapter or power cable will neither power the computer nor recharge the batteries.

Here are some typical problems and how to solve them:

---

**The AC power light does not come on when you plug in the AC adapter and power cable.**

Make sure the AC adapter and power cable are firmly plugged into both the wall outlet and the computer.

If the AC power light still does not come on, check that the wall outlet is working properly by plugging in a lamp or other appliance.

**The AC adapter and power cable work correctly, but the battery will not charge.**

The battery doesn't charge while the computer is consuming full power. Try turning off the computer.

The main battery may not be inserted correctly in the computer. Turn off the computer, remove the battery, clean the contacts with a soft dry cloth (if necessary) and replace the battery.

The battery may be too hot or too cold to charge properly. If you think this is the probable cause, let the battery reach room temperature and try again.

If the battery has completely discharged, it will not begin charging immediately. Leave the AC adapter and power cable connected, wait 20 minutes and see if the battery is charging.

If the battery light is glowing after 20 minutes, let the computer continue charging the battery for at least another 20 minutes before you turn on the computer.

If the battery light does not glow after 20 minutes, the battery may have reached the end of its useful life. Try replacing it.

**The battery appears not to power the computer for as long as it usually does.**

If you frequently recharge a partially charged battery, it may not charge fully. Let the battery discharge completely, then try charging it again.

Check the power options using the Power Management utility. Have you added a device, such as a PC Card or

memory module, that takes its power from the battery? Is your software using the hard disk more? Is the display power set to turn off automatically? Was the battery fully charged to begin with? All these conditions affect how long the charge lasts.

For more information on maximizing battery power, see “[Charging batteries](#)” on page 104.

## Keyboard problems

If, when you type, strange things happen or nothing happens, the problem may be related to the keyboard itself.

### The keyboard produces unexpected characters.

A keypad overlay may be on. If the numeric keypad or cursor control light is on, press Fn and F10 simultaneously to turn off the cursor control light, or press Fn and F11 simultaneously to turn off the numeric keypad light.

If the problem occurs when both the keypad overlays are off, make sure the software you are using is not remapping the keyboard. Refer to the software’s documentation and check that the program does not assign different meanings to any of the keys.

### You have connected an external keyboard and the operating system displays one or more keyboard error messages.

If you have a second keyboard, try it. If it works, the first keyboard may be defective or incompatible with your computer.

## Display problems

Here are some typical display problems and their solutions:

### The display is blank.

Display Auto Off may have gone into effect. Press any key to activate the screen.

---

You may have activated the instant password feature by pressing Fn and F1 simultaneously. If you have registered a password, press the Enter key, type the password and press Enter. If no password is registered, press Enter. The screen reactivates and allows you to continue working.

If you are using the built-in screen, make sure the display priority is not set for an external monitor. To do this, press Fn and F5 simultaneously. If this does not correct the problem, press Fn and F5 simultaneously again to return the display priority to its previous setting. You may have to cycle through the Fn/F5 options by pressing and holding the Fn key while releasing the F5 several times. Wait approximately five seconds between each F5 selection. For more information, refer to “[Display modes](#)” on page 228.

If you are using an external monitor:

- ❖ Check that the monitor is turned on.
- ❖ Check that the monitor’s power cable is firmly plugged into a working power outlet.
- ❖ Check that the cable connecting the external monitor to the computer is firmly attached.
- ❖ Try adjusting the contrast and brightness controls on the external monitor.
- ❖ Press Fn and F5 simultaneously to make sure the display priority is not set for the built-in screen.

### **The screen does not look right.**

You can change the display settings by clicking a blank area of the desktop with the secondary control button, then clicking Properties. This opens the Display Properties dialog box. The Appearance tab of this dialog box allows you to choose the colors for the screen. The Settings tab allows you to choose the screen resolution.

### The built-in screen flickers.

Some flickering is a normal result of the way the screen produces colors. To reduce the amount of flickering, try using fewer colors.

To change the number of colors displayed:

- 1** Point at the desktop and click with the secondary button.
- 2** Click **Properties**, and then the **Settings** tab.
- 3** Change the Colors option and click **OK**.

For more information, see Windows® Help.

### A message tells you that there is a problem with your display settings and that the adapter type is incorrect or the current settings do not work with your hardware.

Reduce the size of the color palette to one that is supported by the computer's internal display.

To change the display properties:

- 1** Point at the desktop and click with the secondary button.  
The Display Properties window appears.
- 2** Click **Properties**, then click the **Settings** tab.
- 3** Adjust the screen resolution and/or color quality.
- 4** Click **OK**.

### The display mode is set to Simultaneous and the external display device does not work.

Make sure the external monitor is capable of displaying at resolutions of 800 x 600 or higher. Devices that do not support this resolution will only work in Internal/External mode.

## Disk drive problems

Problems with the hard disk or with a diskette drive usually show up as an inability to access the disk or as sector errors.

---

Sometimes a disk problem may cause one or more files to appear to have garbage in them. Typical disk problems are:

**You are having trouble accessing a disk, or one or more files appear to be missing.**

Make sure you are identifying the drive by its correct name (A: or C:).

### Error-checking

Run Error-checking, which analyzes the directories, files and File Allocation Table (FAT) on the disk and repairs any damage it finds:

To run Error-checking:

- 1** Click **Start**, then click **My Computer**.
- 2** Right-click the drive you want to check and select **Properties**.

The drive's properties box appears.

- 3** Click the **Tools** tab.
- 4** Click the **Check now** button.

The Check Disk All Apps box appears.

- 5** You can choose one or both options:
  - ❖ Automatically fix file system errors
  - ❖ Scan for and attempt recovery of bad sectors
- 6** Click **Start**.

Error-checking runs the test.

**Your hard disk seems very slow.**

If you have been using your computer for some time, your files may have become fragmented. Run Disk Defragmenter. To do this, click **Start**, then click **All Programs**, point to **Accessories** and **System Tools**, and click **Disk Defragmenter**.

**Your data files are damaged or corrupted.**

Refer to your software documentation for file recovery procedures. Many software packages automatically create backup files.

You may also be able to recover lost data using utility software, which is available from your dealer.

**Some programs run correctly but others do not.**

This is probably a configuration problem. If a program does not run properly, refer to its documentation and check that the hardware configuration meets its needs.

**A diskette will not go into the external diskette drive.**

You may already have a diskette in the drive. Make sure the drive is empty.

You may be inserting the diskette incorrectly. Hold the diskette with the hub side facing down, and insert it so that the metal head window cover goes into the drive first.

The metal cover or a loose label may be obstructing the path into the drive. Carefully inspect the diskette. If the metal cover is loose, replace the diskette. If the label is loose, replace the label and try inserting the diskette again.

**The computer displays the Non-system disk or disk error message.**

If you are starting the computer from a diskette, the diskette in the drive does not have the files necessary to start the computer. Replace it with a bootable diskette.

**The drive cannot read a diskette.**

Try another diskette. If you can access the second diskette, the first diskette (not the drive) is probably causing the problem. Run Error-checking on the faulty diskette (for instructions, see “[Disk drive problems](#)” on page 200).

## DVD-ROM or Multifunction drive problems

### You cannot access a disc in the drive.

Make sure the drive tray has closed properly. Press gently until it clicks into place.

Open the drive tray and remove the disc. Make sure the drive tray is clean. Any dirt or foreign object can interfere with the laser beam.

Examine the disc to see whether it is dirty. If necessary, wipe it with a clean damp cloth dipped in water or a neutral cleaner.

Replace the disc in the tray. Make sure it is lying flat, label side uppermost. Press the disc down until it locks on the spindle. Close the drive tray carefully, making sure it has shut completely.

### You press the disc eject button, but the drive tray does not slide out.

Make sure the computer is connected to a power source and turned on. The DVD-ROM or Multifunction drive eject mechanism requires power to operate.

To remove a disc without turning on the computer, use a narrow object, such as a straightened paper clip, to press the manual eject button. This button is in the small hole next to the disc eject button on the right side of the computer.

### Some discs run correctly, but others do not.

If the problem is with an application CD-ROM, refer to the software's documentation and check that the hardware configuration meets the program's needs.

The color of the materials used to make the disc can affect its reliability. Silver-colored CD-ROMs are the most reliable, followed by gold-colored CD-ROM. Green-colored CD-ROMs are the least reliable.

## WinDVD problems: general issues

WinDVD™ has been configured to provide optimum performance and quality based upon your system's available resources. Changes made to the system or its configuration may impact the playback performance of the WinDVD player.

### **WinDVD controls are disabled.**

Controls may be grayed out by commands on the DVD disc. For example, it is common for DVD movie titles to disable fast-forward and rewind during the legal notices at the beginning of a movie.

### **Playback performance is poor.**

Make sure your system's A/C adapter is plugged in and the system's power setting is on full.

### **The Root or Title menu does not open.**

Most DVD titles have one or both of the "Root" and "Title" menus. If one menu button appears to do nothing, try the other menu button.

### **WinDVD performance decreases after making a system change.**

DVD playback performance is dependent upon several system resources. Changes to these system resources caused, for example, by installing a new graphics or audio card may impact performance. Some software changes may also impact playback performance (for example, downloading new drivers from the Web).

Before installing a new hardware or software component on your system, check for any potential conflicts between its resource requirements and your current system configuration. Also, if you change your operating system, check with your PC manufacturer or your graphics card vendor to ensure that you have the appropriate drivers for both your hardware (for example, the graphics card) and software (drivers must support the operating system and DVD with WinDVD).

## Slow playback performance.

DVD playback is a resource intensive application. Other applications and/or changes to your system hardware, software or configuration can impact playback performance. If playback is slower than normal, try:

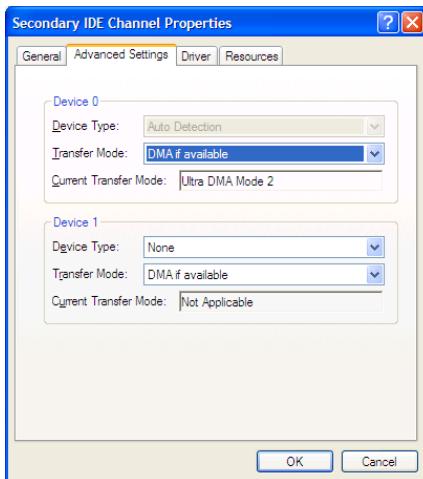

- 1** Closing any other open applications to improve the performance of the DVD playback.
- 2** Ensuring DMA (Direct Memory Access) is turned on. See “[Secondary IDE Channel DMA setting](#)” on page 205 for more information.
- 3** If you have installed new hardware, ensure the component’s drivers support Microsoft® DirectX® 8.1 or higher and WinDVD. Contact the manufacturer of the component.
- 4** Verifying that your display driver resolution, color depth and refresh rate are optimal for DVD playback. (Some systems do not support video overlays if these parameters are not optimal.) Try lowering these settings to improve performance.

## Secondary IDE Channel DMA setting

To ensure the Secondary IDE Channel DMA setting:

- 1** Click **Start**, **Control Panel**, then **Printers and Other Hardware**.
- 2** Click the **System** icon.  
The System Properties window displays.
- 3** Click the **Hardware** tab.
- 4** Click the **Device Manager** button
- 5** Click “+” to open the IDE ATA/ATAPI Controllers.

6 Double-click the **Secondary IDE Channel** icon.  
The Secondary IDE Channel Properties window displays.

*Sample Secondary IDE Channel Properties window*

7 Click **Advanced Settings**.  
8 Look at Device 0. The current transfer mode should be Ultra DMA Mode 2. If it isn't, select DMA, if available, from the drop-down list and click **OK**.

### WinDVD problems: content issues

**Movies exhibit poor performance of “Director’s Commentary” or other similar optional content versions.**

Some movies may exhibit poor performance of these features. In particular, the video portion of the movie may become jerky or show pauses. The normal version of the movie will not show this problem.

---

## WinDVD will not function properly with “debug” software installed.

The WinDVD application will not function properly if it detects that debug software is present on the system. Remove the debug software to restore functionality of WinDVD.

### Minimum system requirements

WinDVD performs best when these recommended components are present in your system:

- ❖ Sound card (with 48 KHz sampling rate support)
- ❖ DirectX® 8.1 or higher (Source: Microsoft)
- ❖ DVD-ROM drive with DMA enabled (only available with Microsoft OSR 2.1 or above with PIXX 4.0 and USB support added)
- ❖ WinDVD software

### WinDVD: error messages

This table offers descriptions and resolutions for error messages that may appear when using WinDVD.

<i>Error message and additional information</i>	<i>Resolution</i>
The disc in the DVD-ROM drive is not a valid disc type.  Valid disc types are DVD-Video and audio CD.	Ensure the disc is a valid disc type.  If the disc works in other players, try using a disc cleaner.  The disc may require features that are not supported by WinDVD.

<i>Error message and additional information</i>	<i>Resolution</i>
<p>Microsoft® DirectShow® components are missing.</p> <p>Microsoft® DirectShow® is not installed properly on the system.</p>	<p>Reinstall Microsoft® DirectShow® version 6.0 or higher (available from the Microsoft Web site).</p>
<p>No audio subsystem could be found for playback.</p> <p>There is a problem with the audio card or audio component within the system. The problem may be one of the following:</p> <p>There is a problem with the audio driver.</p> <p>The audio card is faulty.</p>	<p>Check installation of the sound card drivers.</p>
<p>WinDVD cannot display the selected resolution due to system limitations.</p> <p>The screen size exceeds the allowable display limit.</p> <p>There are not enough system resources to play the DVD at the selected setting.</p>	<p>Alter the display settings to reduce the resolution or number of colors.</p> <p>Update video drivers.</p>

Error message and additional information	Resolution
<p>The audio settings are incorrect. Please check sound card or drivers.</p> <p>The audio card was found, but there is a problem with the audio card or drivers.</p> <p>The wrong audio driver may be installed in the system.</p>	Check installation of the audio card drivers.
<p>An unexpected error has occurred.</p> <p>This error is unclassified. Report the problem and any error code to your supplier's Technical Support.</p>	This is usually a rare, title-specific problem.
<p>There is a problem with the copy protection system within the DVD-ROM or Multifunction drive. Playback cannot continue.</p> <p>The DVD-ROM or Multi-function drive failed to authenticate (authorize playback of) the DVD disc. There may be a problem with the DVD-ROM or Multifunction drive.</p>	Try to play another disc. Contact your supplier's Technical Support.
WinDVD does not support this version of the DVD specification.	Check that this is a DVD-Video 1.0 disc.

<i>Error message and additional information</i>	<i>Resolution</i>
<p>This DVD disc cannot be played in this region.</p> <p>The selected region cannot be used due to one of the following:</p> <p>The Region Code of WinDVD and the DVD disc do not match. Check the Region Code of WinDVD within the About tab and use a disc from the appropriate region.</p> <p>The Windows operating system is assigned to a region that does not match the Region Code of WinDVD.</p>	Use DVD content from the appropriate region. If applicable on your system, refer to the Help file for how to change the Region Code.
<p>Permission to play is denied. Please check the Parental Control setting.</p> <p>The Parental Control setting of WinDVD is lower than the Parental Control level of the content being played. Playback of the DVD disc is not authorized.</p>	Change the Parental Control level in the DVD Options dialog. Note that WinDVD requires a password for this change.
WinDVD encountered an error.	Report the problem and any error code to your supplier's Technical Support.

Error message and additional information	Resolution
This file appears to contain unsupported data.	Please refer to the Supported Formats section of the WinDVD Help file and ensure that this file contains valid data.
<p>The drive or disc cannot be found. This may be caused by one of the following: No disc in the DVD-ROM or Multifunction drive. No DVD-ROM or Multifunction drive. A disc of an unsupported type in the DVD-ROM drive.</p>	Check the DVD-ROM or Multifunction drive or DVD disc. Ensure the disc is a valid type (DVD-Video, Video CD, or audio CD).

## Sound system problems

### You do not hear any sound from the computer.

Adjust the volume control.

If you are using external headphones or speakers, check that they are securely connected to your computer.

### The computer emits a loud, high-pitched noise.

This is feedback between the microphone and the speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud. Adjust the volume control.

---

## PC Card problems

PC Cards (PCMCIA-compatible) include many types of devices, such as a removable hard disk, additional memory, or a pager.

Most PC Card problems occur during installation and setup of new cards. If you're having trouble getting one or more of these devices to work together, several sections in this chapter may apply.

Resource conflicts can cause problems when using PC Cards. See “[Resolving a hardware conflict](#)” on page 192.

### Card Information Structure

When you insert a PC Card into a slot, the computer attempts to determine the type of card and the resources it requires by reading its Card Information Structure (CIS). Sometimes the CIS contains enough information for you to use the card immediately.

Other cards must be set up before you can use them. Use the Windows® XP PC Card (PCMCIA) Wizard to set up the card. Refer to your Microsoft® documentation for more information, or refer to the documentation that came with the PC Card.

Some card manufacturers use special software called *enablers* to support their cards. Enablers result in nonstandard configurations that can cause problems when installing the PC Card.

If your system does not have built-in drivers for your PC Card and the card did not come with an operating system driver, it may not work under the operating system. Contact the manufacturer of the PC Card for information about using the card under the operating system.

## PC Card checklist

- ❖ Make sure the card is inserted properly into the slot.  
See “[Using PC Cards](#)” on page 167 for how to insert PC Cards.
- ❖ Make sure all cables are securely connected.
- ❖ Occasionally a defective PC Card slips through quality control. If another PCMCIA-equipped computer is available, try the card in that machine. If the card malfunctions again, it may be defective.

## Resolving PC Card problems

Here are some common problems and their solutions:

### The slots appear to be dead. PC Cards that used to work no longer work.

Check the PC Card status:

- 1 Click **Start**.
- 2 Click **My Computer** icon with the secondary button, then click **Properties**.

The System Properties dialog box appears.

- 3 Click the **Hardware** tab.
- 4 Click the **Device Manager** button.
- 5 Double-click the **PCMCIA adapter**.
- 6 Double-click the appropriate PC Card.

The operating system displays your PC Card’s Properties dialog box, which contains information about your PC Card configuration and status.

### The computer stops working (hangs) when you insert a PC Card.

The problem may be caused by an I/O (input/output) conflict between the PCMCIA socket and another device in the

---

system. Use Device Manager to make sure each device has its own I/O base address. See “[Fixing a problem with Device Manager](#)” on page 194 for more information.

Since all PC Cards share the same socket, each card is not required to have its own address.

### **Hot swapping (removing one PC Card and inserting another without turning the computer off) fails.**

Follow this procedure before you remove a PC Card:

- 1** Click the **Safely Remove Hardware** icon on the taskbar.
- 2** Click **Safely remove xxxx**, where xxxx is the identifier for your PC Card.  
The operating system displays a message that you may safely remove the card.
- 3** Remove the card from the slot.

### **The system does not recognize your PC Card.**

Refer to the PC Card documentation.

Removing a malfunctioning card and reinstalling it can correct many problems. For more information, see “[Using PC Cards](#)” on page 167.

### **A PC Card error occurs.**

Reinsert the card to make sure it is properly connected.

If the card is attached to an external device, check that the connection is secure.

Refer to the card’s documentation, which should contain a troubleshooting section.

## Printer problems

This section lists some of the most common printer problems:

### The printer will not print.

Check that the printer is connected to a working power outlet, turned on and ready (on line).

Check that the printer has plenty of paper. Some printers will not start printing when there are just two or three sheets of paper left in the tray.

Make sure the printer cable is firmly attached to the computer and the printer.

Run the printer's self-test to check for any problem with the printer itself.

Make sure you installed the proper printer drivers, as shown in "[Connecting a printer](#)" on page 61.

You may have connected the printer while the computer is on. Disable Stand By mode, turn off the computer, and turn off the printer. Turn the printer back on, make sure it is on line, then turn the computer back on.

Try printing another file. For example, you could create and attempt to print a short test file using Notepad. If a Notepad file prints correctly, the problem may be in your original file.

If you cannot resolve the problem, contact the printer's manufacturer.

### The printer will not print what you see on the screen.

Many programs display information on the screen differently from the way they print it. See if your program has a print preview mode. This mode lets you see your work exactly as it will print. Contact the software manufacturer for more information.

## Modem problems

This section lists common modem problems:

### **The modem will not receive or transmit properly.**

Make sure the cable from the modem to the telephone line is firmly connected to the computer's modem port and the telephone line jack.

Check the port settings to make sure the hardware and software are referring to the same COM port. See "[Determining the COM port](#)" on page 154.

Check the communications parameters (baud rate, parity, data length and stop bits) specified in the communications program. It should be set up to transmit at 300, 1200, 2400, 4800, 9600, 14400, 28800, 33600 bps (bits per second) or higher. For more information, go to [toshiba.com](http://toshiba.com).

### **The modem is on, set up properly and still will not transmit or receive data.**

Make sure the line has a dial tone. Connect a telephone handset to the line to check this.

The other system may be busy or off line. Try making a test transmission to someone else.

## Develop good computing habits

Make sure you are prepared.

### **Save your work frequently.**

You can never predict when your computer will lock, forcing you to close a program and lose unsaved changes. Many software programs build in an automatic backup, but you should not rely solely on this feature. Save your work! See "[Computing tips](#)" on page 71 for instructions.

---

**On a regular basis, back up the information stored on your hard disk.**

Here are some ways you can do this:

- ❖ Copy files to diskette, following the steps in “[Saving your work](#)” on page 77.
- ❖ Connect a tape drive to the system and use specialized software to copy everything on the hard disk to a tape.

Some people use a combination of these methods, backing up all files to tape weekly and copying critical files to diskette on a daily basis.

If you have installed your own programs, you should back up these programs as well as your data files. If something goes wrong that requires you to reformat your hard disk and start again, reloading all your programs and data files from a backup source will save time.

**Read the user’s guides.**

It’s very difficult to provide a fail-safe set of steps you can follow every time you experience a problem with the computer. Your ability to solve problems will improve as you learn about how the computer and its software work together.

Get familiar with all the user’s guides provided with your computer, as well as the manuals that come with the programs and devices you purchase.

Your local computer store or book store sells a variety of self-help books you can use to supplement the information in the manuals.

---

## If you need further assistance

If you have followed the recommendations in this chapter and are still having problems, you may need additional technical assistance. This section contains the steps to take to ask for help.

### Before you call

Since some problems may be related to the operating system or the program you are using, it is important to investigate other sources of assistance first.

Try the following before contacting Toshiba:

- ❖ Review the troubleshooting information in your operating system documentation.
- ❖ If the problem occurs while you are running a program, consult the program's documentation for troubleshooting suggestions. Contact the software company's technical support group for their assistance.
- ❖ Consult the dealer from whom you purchased your computer and/or program. Your dealer is your best source for current information.

For the number of a Toshiba dealer near you in the United States, call: (800) 457-7777.

### Contacting Toshiba

If you still need help and suspect that the problem is hardware-related, Toshiba offers a variety of resources to help you.

- 1 Start with accessing Toshiba on the Internet using any Internet browser by typing [pcsupport.toshiba.com](http://pcsupport.toshiba.com)
- 2 Next, try one of Toshiba's online services. The Toshiba Forum can be accessed through CompuServe® by typing: [go.toshiba](http://go.toshiba).

---

## Toshiba voice contact

Before calling Toshiba, make sure you have:

- ❖ Your computer's model and model number.
- ❖ Your computer's serial number.
- ❖ The computer and any optional devices related to the problem.
- ❖ Backup copies of your operating system and all other preloaded software on diskettes or CD-ROM.
- ❖ Name and version of the program involved in the problem along with its installation diskettes or CD-ROM.
- ❖ Information about what you were doing when the problem occurred.
- ❖ Exact error messages and when they occurred.

For technical support, call the Toshiba InTouch® Center:

Within the United States at (800) 457-7777

Outside the United States at (949) 859-4273

# Appendix A

## Hot Keys

---

Hot keys are keys that, when pressed in combination with the Fn key, turn system functions on and off. Hot keys have a legend on or above the key indicating the option or feature the key controls.

---

*All functionality is the same when the keyboard is in wireless mode.*

---

### Volume Mute

This hot key enables/disables volume mute on your computer.

When volume mute is enabled, no sound will come from the speakers or headphones.

## Instant password security

Fn + 

This hot key causes the screen to become blank, hiding whatever was previously displayed.

### Without a password

The Fn + F1 key combination turns off the display and activates instant security. Using the mouse or any key will make the display reappear.

### With a password

The Fn + F1 key combination turns off the display and activates instant security. Using the mouse or any key will make the screen saver password dialog box appear, and you can then type in either a user or supervisor password.

For the Windows® XP operating system, you type the user or supervisor password into the Windows® security screen dialog box.

To activate the password feature:

- 1 Click Start, Control Panel.**
- 2 Click Appearances and Themes**
- 3 Click one of the following:**
  - ❖ **Choose a screen saver** in the **Pick a task** section
  - ❖ **Display** in the **or pick a Control Panel icon** section

The Display Properties window appears.

- 4** If you clicked **Choose a screen saver**, the Screen Saver tab has already been selected. If it isn't selected, click the **Screen Saver** tab.
- 5** Click the **On resume, password protected** check box.
- 6** Click **OK**.

---

## Power usage mode

Fn + 

This hot key displays the power usage pop-up window and cycles through the battery save modes.

The power usage modes in the operating system under battery power are:

Long Life, Normal, and High Power; User Defined

*Sample power usage modes*

The power usage modes in the Windows® operating system under AC power are Full Power and User Defined.

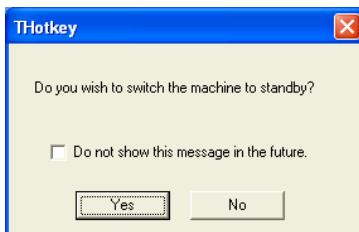

The properties of each mode are set in the Toshiba Power Management utility. For more information, see ‘Power Management’ on page 172.

## Stand By mode

Fn + 

This hot key puts the computer into Stand By mode.

- ❖ A message box is displayed by default to confirm that the computer is going into Stand By mode. This message box can be set so it does not display.

*Sample Stand By confirmation box*

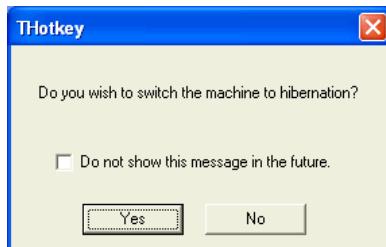

For more information about Stand By mode, please see “[Using Standby](#)” on page [99](#).

## Hibernation mode

Fn + 

This hot key puts the computer into Hibernation mode.

- ❖ If Hibernation mode is enabled (the default) a message box is displayed by default to confirm the computer is going into Hibernation mode. The message box can be set so it does not display.

*Sample Hibernation confirmation box*

If Hibernation mode is disabled, this hot key will not respond. For more information on Hibernation mode, see “[Using Hibernation](#)” on page 97.

---

## Display modes

Fn + 

This hot key cycles through the power-on display options.

The display modes options are:

- ❖ Built-in display panel only
- ❖ Built-in display panel and external monitor simultaneously
- ❖ External monitor only
- ❖ TV+LCD
- ❖ TV only

In order to use a simultaneous mode, you must set the resolution of the built-in display panel to match the resolution of the external display device. Simultaneous mode works only with external monitors that support 800 X 600 resolution and higher.

## Display brightness

Fn + 

This hot key decreases the screen brightness.

Fn + 

This hot key increases the screen brightness.

---

## Enabling a wireless device

This hot key enables/disables the optional wireless devices in your computer.

The wireless mode is:

- ❖ Wi-Fi enabled—This enables the Wi-Fi antenna.

## Disabling or enabling the TouchPad

This hot key enables/disables the TouchPad.

To use the TouchPad, see “[Using the TouchPad™](#)” on [page 55](#).

*Sample disable and enable TouchPad windows*

## Keyboard hot keys

This hot key turns the cursor control overlay on and off.

This hot key turns the numeric overlay on and off.

This hot key turns the scroll lock feature on and off.

# Appendix B

## Power Cable Connectors

---

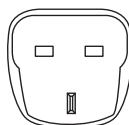

Your notebook computer features a universal power supply you can use worldwide. This appendix shows the shapes of the typical AC power cable connectors for various parts of the world.

# Glossary

---

---

*TECHNICAL NOTE: Some features defined in this glossary may not be available on your computer.*

---

## Acronyms

The following acronyms may appear in this user's guide.

<b>AC</b>	alternating current
<b>BIOS</b>	basic input/output system
<b>bps</b>	bits per second
<b>CD</b>	compact disc
<b>CD-ROM</b>	compact disc read-only
<b>CD-RW</b>	compact disc read-write
<b>CMOS</b>	complementary metal-oxide semiconductor
<b>COM1</b>	communications port 1 (serial port)
<b>COM2</b>	communications port 2 (serial port)
<b>CPU</b>	central processing unit
<b>DC</b>	direct current

<b>DMA</b>	direct memory access
<b>DIMM</b>	dual inline memory module
<b>DOS</b>	disk operating system
<b>DPI</b>	dots per inch
<b>DSTN</b>	dual supertwist nematic
<b>DVD</b>	digital versatile (or video) disc
<b>DVD-ROM</b>	digital versatile (or video) disc read-only memory
<b>ECP</b>	enhanced capabilities port
<b>EPROM</b>	erasable programmable read-only memory
<b>FAT</b>	file allocation table
<b>FCC</b>	Federal Communications Commission
<b>FIR</b>	fast infrared
<b>GB</b>	gigabyte
<b>HDD</b>	hard disk drive
<b>HTML</b>	Hypertext Markup Language
<b>IEEE</b>	Institute of Electrical and Electronics Engineers
<b>I/O</b>	input/output
<b>IRQ</b>	interrupt request
<b>ISP</b>	Internet service provider
<b>KB</b>	kilobyte
<b>LAN</b>	local area network
<b>LCD</b>	liquid crystal display
<b>LPT1</b>	line printer port 1 (parallel port)
<b>LSI</b>	large-scale integration
<b>MB</b>	megabyte
<b>MIDI</b>	Musical Instrument Digital Interface
<b>PC</b>	personal computer
<b>PCI</b>	Peripheral Component Interconnect
<b>PCMCIA</b>	Personal Computer Memory Card International Association

---

<b>RAM</b>	random access memory
<b>RFI</b>	radio frequency interference
<b>ROM</b>	read-only memory
<b>RTC</b>	real-time clock
<b>SCSI</b>	small computer system interface
<b>SDRAM</b>	synchronous dynamic random access memory
<b>SRAM</b>	static random access memory
<b>SVGA</b>	super video graphics adapter
<b>TFT</b>	thin film transistor
<b>USB</b>	universal serial bus
<b>URL</b>	uniform resource locator
<b>WAN</b>	wide area network
<b>www</b>	World Wide Web

## Terms

The following terms may appear in this user's guide.

### A

**active-matrix display** — A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology. Also known as a “TFT display,” in its simplest form there is one thin film transistor (TFT) for each cell. This type of display works well with notebook computers because of its shallow depth and high-quality color. Active-matrix displays are viewable from wider angles than most passive-matrix displays.

**adapter** — A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector. An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

**alternating current (AC)** — The type of power usually supplied to residential and commercial wall outlets. AC reverses its direction at regular intervals. Compare *direct current (DC)*.

**application** — A computer program that you use to perform tasks of a specific type. Applications include word processors, spreadsheets, and database management systems. See also *program*.

**B** **backup** — A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

**basic input/output system (BIOS)** — See *BIOS*.

**baud rate** — The speed at which a communication device, such as a printer or modem, transmits information. Baud rate is the number of signal changes per second (not necessarily the same as bits per second). See also *bits per second*.

**BIOS (basic input/output system)** — Basic instructions, stored in read-only memory (ROM), containing the information the computer needs in order to check hardware and load the operating system when you start up the computer.

**bit:** — Short for “binary digit.” A bit is the smallest unit of information used by a computer. A group of eight bits is a byte. See also *byte*.

**bits per second (bps)** — A way of measuring the speed at which information is passed between two devices. The basic measure used in modem communications, bps is similar, but not identical, to the baud rate. See also *baud rate*.

**boot** — To start the computer. The term “boot” originates from bootstrap program (as in “pulling itself up by its bootstraps”), a program that loads and initializes the operating system. See also *reboot*.

**boot disk** — See *system disk*.

**boot priority (startup sequence)** — The order in which the computer accesses its disk drives to locate the startup files. Under the default startup sequence, the computer looks for the startup files in the diskette drive before checking the hard disk.

---

**bus** — An electrical circuit that connects the central processing unit (CPU) with other parts of the computer, such as the video adapter, disk drives, and ports. It is the pathway through which data flows from one device to another. See also *bus speed*, *frontside bus*.

**bus speed** — The speed at which the central processing unit (CPU) communicates with the other parts of the computer.

**byte** — A sequence of eight bits. A byte is the smallest addressable unit of data. See also *bit*, *gigabyte*, *kilobyte*, *megabyte*.

**C**

**cache** — A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also *CPU cache*, *L1 cache*, *L2 cache*.

**CD** — An individual compact disc. See also *CD-ROM*.

**CD-ROM (compact disc read-only memory)** — A form of high-capacity storage that uses laser optics instead of magnetic means for reading data. See also *CD*. Compare *DVD-ROM*.

**central processing unit (CPU)** — The chip that functions as the “brain” of the computer. It takes information from outside sources, such as memory or keyboard input, processes the information, and sends the results to another device that uses the information.

**character** — Any letter, number, or symbol you can use on the computer. Some characters are non-printing characters, such as a paragraph break in a word-processing program. A character occupies one byte of computer storage.

**chip** — A small piece of silicon containing computer logic and circuits for processing, memory, input/output, and/or control functions. Chips are mounted on printed circuit boards.

**click** — To press and release the control button or mouse button without moving the cursor with the TouchPad or mouse. In the operating system, this refers to the left mouse button or primary control button, unless otherwise stated. See also *double-click*.

**color palette** — A set of specified colors that establishes the colors that can be displayed on the screen at a particular time.

**compatibility** — The extent to which computers, programs, or devices can work together harmoniously, using the same commands, formats, or language as another.

**configuration** — (1) The collection of components that make up a single computer system. (2) How parts of the system are set up (that is, configured).

**controller** — A device that controls the transfer of data from a computer to a peripheral device and vice versa. For example, disk drives, monitors, keyboards, and printers all require controllers.

**CPU** — See *central processing unit (CPU)*.

**CPU cache** — A section of very fast memory residing between the CPU and the computer’s main memory that temporarily stores data and instructions the CPU will need to execute commands and programs. See also *cache, L1 cache, L2 cache*.

**cursor** — A symbol that indicates the current position on the screen. The shape of the cursor varies, depending on the program you’re using and what you’re doing.

## D

**default** — The setting selected by a program when the user does not specify an alternative setting.

**device** — A component attached to the computer. Devices may be external (outside the computer’s case) or internal (inside the computer’s case). Printers, disk drives, and modems are examples of devices.

**device driver** — A program (called a “driver”) that permits a computer to communicate with a device.

**dialog box** — An on-screen window displayed by the operating system or a program giving a direction or requesting input from the user.

**direct current (DC)** — The type of power usually supplied by batteries. DC flows in one direction. Compare *alternating current (AC)*.

**direct memory access (DMA)** — A dedicated channel, bypassing the CPU, that enables direct data transfer between memory and a device.

**directory** — See *folder*.

**disable** — To turn a computer option off. See also *enable*.

**disc** — A round, flat piece of metal, designed to be read from and written to by optical (laser) technology, and used in the production of optical discs, such as CDs and DVDs. Compare *disk*.

**disk** — A round, flat piece of material that can be magnetically influenced to hold information in digital form, and used in the production of magnetic disks, such as diskettes and hard disks. Compare *disc*. See also *diskette*, *hard disk*.

**disk drive** — The device that reads and writes information and programs on a diskette or hard disk. It rotates the disk at high speed past one or more read/write heads.

**diskette** — A thin, flexible disk in a protective jacket that stores magnetically encoded data. Diskettes can be removed from the computer. Your computer uses 3.5-inch diskettes.

**document** — Any file created with an application and, if saved to disk, given a name by which it can be retrieved. See also *file*.

**double-click** — To press the control button or mouse button rapidly twice without moving the cursor with the mouse. In the operating system, this refers to the primary control button or left mouse button, unless otherwise stated.

**download** — (1) In communications, to receive a file from another computer through a modem or network. (2) To send font data from the computer to a printer. See also *upload*.

**drag** — To hold down the control button or mouse button while moving the cursor to drag a selected object. In the operating system, this refers to the primary control button or left mouse button, unless otherwise stated.

**driver** — See *device driver*.

**DVD** — An individual digital versatile (or video) disc. See also *DVD-ROM*.

**DVD-ROM (digital versatile [or video] disc read-only memory)**

— A very high-capacity storage medium that uses laser optics for reading data. Each DVD-ROM can hold as much data as several CD-ROMs. Compare *CD-ROM*.

**E**

**emulation** — A technique in which a device or program imitates another device or program.

**enable** — To turn on a computer option. See also *disable*.

**executable file** — A computer program that is ready to run.

Application programs and batch files are examples of executable files. Names of executable files usually end with a .bat or .exe extension.

**expansion device** — A device that connects to a computer to expand its capabilities. Other names for an expansion device are port expander, port replicator, docking station, or network adapter.

**extension** — See *file extension*.

**external device** — See *device*.

**F**

**file** — A collection of related information, saved on disk with a unique name. A file may be a program, information used by a program, or a document. See also *document*.

**file allocation table (FAT)** — The section of a disk that keeps track of the location of files stored on the disk.

**file name** — A set of characters that uniquely identifies a file within a particular folder. It consists of two parts: the actual name and the file name extension. See also *file extension*.

**file extension** — The three characters following the period (pronounced “dot”) at the end of a file name. The extension indicates the type of file. Examples are .exe for program files and .hlp for help files. See also *file name*.

---

**folder** — Also called directory. A container for organizing files saved to a disk. A folder is symbolized on screen by a graphical image (icon) of a file folder. A folder can contain files and other folders.

**format** — (verb) To prepare a blank disk for use with the computer's operating system. Formatting creates a structure on the disk so the operating system can write information to the disk or read information from it.

**frontside bus** — The primary pathway (bus) between the CPU and the computer's main memory. Also called "system bus." See also *bus*.

**function keys** — The keys labeled F1 through F12, typically located on the keyboard. Their function is determined by the operating system and/or individual programs.

## G

**gigabyte (GB)** — A unit of data equal to 1,073,741,824 bytes ( $1024 \times 1024 \times 1024$  bytes). See also *byte*.

**ground** — A conductor to which all components of an electric circuit are connected. It has a potential of zero (0) volts, is connected to the earth, and is the point of reference for voltages in the circuit.

## H

**hard disk** — A storage device composed of a rigid platter or platters that can be magnetically coded with data. Hard disks hold much more information than diskettes and are used for long-term storage of programs and data. The primary (or only) hard disk in a computer is usually fixed, but some computers have secondary hard disks that are removable. By default, the hard disk is referred to as drive C.

**hardware** — The physical components of a computer system. Compare *software*.

**Hibernation** — A feature of many Toshiba notebook computers that saves to the hard disk the current state of your work, including all open files and programs, when you turn the computer off. When you turn on the computer again, your work is returned to the same state it was when the computer was turned off. See also *Stand By, Suspend*.

**high-density diskette** — A 3.5-inch diskette that holds 1.44 MB of data. See also *diskette*.

**hot key** — (1) A feature in which certain keys in combination with the Fn key can set system options or control system parameters, such as the battery save mode. (2) A key or combination of keys that activates a memory resident program.

**hot swapping** — The ability to add or remove devices from a computer while the computer is running and have the operating system automatically recognize the change.

**icon** — A small image displayed on the screen that represents a function, file, or program.

**interlaced** — A method of refreshing a computer screen, in which only every other line of pixels is refreshed. Interlaced monitors take two passes to create a complete screen image. Compare *non-interlaced*.

**internal device** — See *device*.

**Internet** — The decentralized, world-wide network of computers that provides electronic mail, the World Wide Web, and other services. See also *World Wide Web*.

**K** **keyboard shortcut** — A key or combination of keys that you use to perform a task instead of using the mouse and control buttons combination.

**kilobyte (KB)** — A unit of data equal to 1024 bytes. See also *byte*.

**L** **L1 (level one) cache** — Memory cache built into the processor to help improve processing speed. See also *cache*, *CPU cache*, *L2 cache*.

**L2 (level two) cache** — Memory cache installed on the motherboard to help improve processing speed. It is slower than L1 cache and faster than main memory. See also *cache*, *CPU cache*, *L1 cache*.

**LAN (local area network)** — A group of computers or other devices dispersed over a relatively limited area and connected by a communications link that enables any device to interact with any other on the network.

---

**liquid crystal display (LCD)** — A type of display that uses a liquid substance between two transparent electrode panels. When an electric current passes through the electrodes, the molecules in the liquid form a crystalline pattern that polarizes the light passing through it. A filter over the electrodes permits only non-polarized light to pass to the surface of the display, creating light and dark pixels.

**load** — To move information from a storage device (such as a hard disk) into memory for processing.

**local area network** — See *LAN*.

**logical drive** — A section of a disk that is recognized by the operating system as a separate disk drive. A system's logical drives may differ from its physical drives. For example, a single hard disk drive may be partitioned into two or more logical drives.

## M

**megabyte (MB)** — A unit of data equal to 1,048,576 bytes (1024 x 1024 bytes). See also *bytes*.

**memory** — Typically refers to the computer's main memory, where programs are run and data is temporarily stored and processed. Memory can be volatile and hold data temporarily, such as RAM, or it can be nonvolatile and hold data permanently, such as ROM. A computer's main memory is RAM. See *RAM, ROM*.

**microprocessor** — See *central processing unit (CPU)*.

**MIDI (Musical Instrument Digital Interface)** — A standard for connecting musical instruments, synthesizers, and computers. The MIDI standard provides a way of translating music into a form computers can use, and vice versa.

**modem** — Short for “modulator/demodulator.” A device that converts information from digital to analog and back to digital, enabling information to pass back and forth between digital computers and analog telephone lines.

**motherboard** — The main circuit board in the computer. It contains the processor, memory, and other primary components.

**MS-DOS prompt** — See *system prompt*.

**multimedia** — A combination of two or more media, such as sound, animation, and video in a computer program or presentation.

**Musical Instrument Digital Interface** — See MIDI.

**N** **network** — A collection of computers and associated devices that are connected by communications facilities. A network allows you to share data and peripheral devices, such as printers, with other users and to exchange electronic mail.

**non-interlaced** — A method of refreshing a computer screen, in which each pixel of every line is refreshed as the electron beam scans across and down the screen. Compare *interlaced*.

**non-system disk** — A disk for storing programs and data that cannot be used to start the computer. Compare *system disk*.

**O** **online** — Available through the computer. Online may refer to information being read from your own computer's hard disk, such as online documentation or online help, or to information coming from another company on a company network or the Internet.

**operating system** — A set of programs that controls how the computer works. Examples of operating systems are Windows® XP and Windows® Millennium Edition operating systems.

**P** **palette** — See *color palette*.

**parallel** — Processes that occur simultaneously. In communications, it means the transmission of more than one bit of information at a time. On your computer, the parallel port provides a parallel communications interface between the computer and an appropriate device. Most modern printers are parallel. Compare *serial*.

**password** — A unique string of characters entered by a user to verify his or her identity to the computer or the network.

**PC Card** — A credit-card-sized expansion card designed to increase the capabilities of notebook computers. PC Cards provide functions such as modem, fax/modem, hard disk drive, network adapter, sound card, or SCSI adapter.

---

**peripheral** — Any device, such as a printer or joystick, that is attached to the computer and controlled by the computer's CPU.

**pixel** — Short for “picture element.” The smallest dot that can be produced on a screen or printer.

**Plug and Play** — Generally, refers to the computer's ability to automatically configure itself to work with peripheral devices. When capitalized, refers to a standard that, when followed by a device manufacturer, allows a PC to configure itself automatically to work with the device.

**pointing device** — Any device, such as the mouse, that enables you to move the cursor on the screen.

**port** — A socket on the computer where you plug in a cable for connection to a network or a peripheral device.

**processor** — See *central processing unit (CPU)*.

**program** — A set of instructions that can be executed by a computer. The general classes of programs (also called software) are operating system, application, and utility. See also *operating system, application, utility*.

**properties** — The attributes of an object or device. For example, the properties of a file include the file's type, size, and creation date.

## R

**RAM (random access memory)** — Volatile memory that can be written to as well as read. By volatile, we mean that information in RAM is lost when you turn off your computer. This type of memory is used for your computer's main memory. See also *memory*. Compare *ROM*.

**random access memory** — See *RAM*.

**read-only memory** — See *ROM*.

**reboot** — See *boot, restart*.

**removable disk** — A disk that can be removed from a disk drive. A diskette is one example of a removable disk.

**resolution** — A measure of the sharpness of the images that can be produced by a printer or displayed on a screen. For a printer, resolution is expressed in dots per inch (dpi). For a screen, it is expressed as the number of pixels available horizontally and vertically.

**restart** — Synonymous with reboot. To reset the computer by reloading the operating system without turning the computer off. See also *boot*.

**RJ11** — A modular connector used on most U.S. telephone systems and direct-connect modems. The RJ11 connector is a 4-wire connector.

**ROM (read-only memory)** — Non-volatile memory that can be read but not written to. By non-volatile, we mean that information in ROM remains whether or not the computer is receiving power. This type of memory is used to store your computer's BIOS, which is essential instructions the computer reads when you start it up. See also *BIOS*, *memory*. Compare *RAM*.

## S

**select** — To highlight or otherwise specify text, data, or graphics with the intent to perform some operation on it.

**serial** — Processes that occur one at a time. In communications, it means the transmission of one bit at a time sequentially over a single channel. On your computer, the serial port provides a serial interface between the computer and an appropriate device. Compare *parallel*.

**shortcut** — See *keyboard shortcut*.

**software** — See *program*. Compare *hardware*.

**Standby** — A feature of some operating systems that allows you to turn off the computer without exiting your open applications and to continue from where you left off when you turn the computer on again.

**system disk** — A diskette that contains the operating system files needed to start the computer. Any diskette can be formatted as a system disk. A system disk is also called a “bootable disk” or a “startup disk.” Compare *non-system disk*.

---

**system prompt** — The symbol (in the MS-DOS® operating system, generally a drive letter followed by a “greater than” sign) indicating where users are to enter commands.

## T U

**TFT display** — See *active-matrix display*.

**universal serial bus (USB)** — A serial bus that supports a data transfer rate of up to 480 Mbps for peripherals such as keyboards and pointing devices. USB peripherals have a single standard for cables and connectors. The USB standard also allows hot swapping of peripherals. See also *bus, hot swapping, serial*.

**upload** — To send a file to another computer through a modem or network. See also *download*.

**USB** — See *universal serial bus (USB)*.

**utility** — A computer program designed to perform a narrowly focused operation or solve a specific problem. Utilities are often related to computer system management.

## W

**Web** — See *World Wide Web*.

**Wi-Fi** — A trademarked term by the Wireless Compatibility Ethernet Alliance which stands for Wireless Fidelity. Wi-Fi is another term for the IEEE 802.11b communication protocol to permit an Ethernet connection using wireless communication components.

**World Wide Web (www)** — The worldwide network of Web sites linked together over the Internet. A user of the Web can jump from site to site regardless of the location of the computer hosting the site. See also *Internet*.
